The Fourth Turning - William Strauss
1997-12-29

"A startling vision of what the cycles of history predict for the future." --USA Weekend This astonishing book will change the way you see the world--and your place in it. With startling originality, *The Fourth Turning* illuminates the past, explains the present, and reimagines the future. Most remarkably, it offers an utterly persuasive prophecy about how America's past will predict its future. William Strauss and Neil Howe base this vision on a provocative theory of American history. The authors look back five

hundred years and uncover a distinct pattern: Modern history moves in cycles, each one lasting about the length of a long human life, each composed of four eras--or "turnings"--that last about twenty years and that always arrive in the same order. First comes a High, a period of confident expansion as a new order takes root after the old has been swept away. Next comes an Awakening, a time of spiritual exploration and rebellion against the now-established order. Then comes an Unraveling, an increasingly troubled era in which individualism triumphs over crumbling institutions. Last comes a Crisis--the Fourth Turning--when society passes through a great and perilous gate in history. Together, the four turnings comprise history's

seasonal rhythm of growth, maturation, entropy, and rebirth. Strauss and Howe locate 1990s America as midway through an Unraveling, putting us currently in the era of Crisis. In a brilliant analysis of the post-World War II period, they show how generational dynamics are the key to understanding the cycles of American history. They draw vivid portraits of all the modern generations: the can-do G.I.s, the mediating Silent, the values-absorbed Boomers, the pragmatic 13ers, and the Millennials. Placed in the context of history's long rhythms, the persona and role of each generation become clear--as does the inevitability of a Crisis. Whatever your stage of life, The Fourth Turning offers bold predictions about how all of us can prepare, individually and collectively, for America's next rendezvous with destiny.

Space Shuttle Missions Summary
(NASA/TM-2011-216142) - Robert D. Legler
2011-09-01

Full color publication. This document has been produced and updated over a 21-year period. It is intended to be a handy reference document, basically one page per flight, and care has been exercised to make it as error-free as possible. This document is basically "as flown" data and has been compiled from many sources including flight logs, flight rules, flight anomaly logs, mod flight descent summary, post flight analysis of mps propellants, FDRD, FRD, SODB, and the MER shuttle flight data and inflight anomaly list. Orbit distance traveled is taken from the PAO mission statistics.

Automated Rendezvous and Docking of Spacecraft - Wigbert Fehse 2003-11-13

The definitive reference for space engineers on rendezvous and docking/berthing (RVD/B) related issues, this book answers key questions such as: How does the docking vehicle accurately approach the target spacecraft? What technology is needed aboard the spacecraft to perform automatic rendezvous and docking, and what systems are required by ground control to supervise this process? How can the proper functioning of all rendezvous-related equipment, systems and operations be verified before launch? The book provides an overview of the major issues governing approach and mating strategies, and system concepts for rendezvous and docking/berthing. These issues are described and explained such that aerospace engineers, students and even newcomers to the field can acquire a basic understanding of RVD/B. The author would like to extend his thanks to Dr Shufan Wu, GNC specialist and

translator of the book's Chinese edition, for his help in the compilation of these important errata.

Investigation Into Apollo 204 Accident - United States. Congress. House. Committee on Science and Astronautics. Subcommittee on NASA Oversight 1967

Committee Serial No. 3. Investigates causes of Jan. 27, 1967 Apollo 204 accident when three astronauts lost their lives. Includes testimony by Thomas R. Baron, author of a report highly critical of spacecraft management at Kennedy Space Center; v.2,pt. 1: Contains text of accident investigation report to NASA by the Apollo 204 Review Board; v.2,pt. 2: Contains Appendix C (continuation) and part of Appendix D to Final Report of Apollo 204 Review Board, which

investigated the Jan. 27, 1967 Apollo 204 accident at Kennedy Space Center, in which three astronauts died; v.2,pt. 3: Contains Appendices D (continuation), E, F, and G to the formal report of investigation by the Apollo 204 Review Board of the Apollo 204 accident at Kennedy Space Center on Jan. 27, 1967, when three astronauts perished; v.3: Describes corrective modifications performed on Apollo spacecraft to prevent a repetition of the Apollo 204 accident, during which 3 astronauts perished at Kennedy Space Center on Jan. 27, 1967.

basic concepts of space mechanics. These include vector kinematics in three dimensions; Newton's laws of motion and gravitation; relative motion; the vector-based solution of the classical two-body problem; derivation of Kepler's equations; orbits in three dimensions; preliminary orbit determination; and orbital maneuvers. The book also covers relative motion and the two-impulse rendezvous problem; interplanetary mission design using patched conics; rigid-body dynamics used to characterize the attitude of a space vehicle; satellite attitude dynamics; and the characteristics and design of multi-stage launch vehicles. Each chapter begins with an outline of key concepts and concludes with problems that are based on the material covered. This text is written for undergraduates

who are studying orbital mechanics for the first time and have completed courses in physics, dynamics, and mathematics, including differential equations and applied linear algebra. Graduate students, researchers, and experienced practitioners will also find useful review materials in the book. NEW: Reorganized and improved discussions of coordinate systems, new discussion on perturbations and quaternions NEW: Increased coverage of attitude dynamics, including new Matlab algorithms and examples in chapter 10 New examples and homework problems
