Human-Animal Studies - Margo DeMello 2012-04-01

An exhaustive listing of books, journals, articles, films, conferences, college programs, organizations, and websites from the new and exciting discipline of Human-Animal studies. The information was gathered by leading academics in the humanities, the social sciences, and the natural sciences--this is the only reference of its kind. This project was completed in conjunction with the book "Teaching the Animal."

In the Company of Animals - James Serpell 1996

Ethnozooarchaeology - Umberto Albarella 2011

This book examines how the study of human-animal relations can help us interpret archaeological evidence. An international range of contributors examines fishing, hunting and husbandry, slaughtering and butchering, ceremonial and ritual practices and techniques of deposition and disposal in traditional societies. Topics covered include the theoretical potential of ethnographic research for zooarchaeology, the use of comparative analogies in the ethnographic and zooarchaeological records, the historical developments of ethnozooarchaeology and specific case studies selected from across the world. This broad geographic approach encompasses examples from different types of societies, ranging from hunter-gatherers to urban populations and from horticulturalists to traditional farmers and pastoralists. This book will be of interest to researchers in a range of fields, including anthropology, ethnohistory and zooarchaeology.

Oxford Textbook of Nature and Public Health - Matilda van den Bosch 2018

Human beings have always been affected by their surroundings. There are various health benefits linked to being able to access to nature; including increased physical activity, stress recovery, and the stimulation of child cognitive development. The Oxford Textbook of Nature and Public Health provides a broad and inclusive picture of the relationship between our own health and the natural environment. All aspects of this unique relationship are covered, ranging from disease prevention through physical activity in green spaces to innovative ecosystem

services, such as climate change adaptation by urban trees. Potential hazardous consequences are also discussed including natural disasters, vector-borne pathogens, and allergies. This book analyses the complexity of our human interaction with nature and includes sections for example epigenetics, stress physiology, and impact assessments. These topics are all interconnected and fundamental for reaching a full understanding of the role of nature in public health and wellbeing. Much of the recent literature on environmental health has primarily described potential threats from our natural surroundings. The Oxford Textbook of Nature and Public Health instead focuses on how nature can positively impact our health and wellbeing, and how much we risk losing by destroying it. The all-inclusive approach provides a comprehensive and complete coverage of the role of nature in public health, making this textbook invaluable reading for health professionals, students, and researchers within public health, environmental health, and complementary medicine.

Human-livestock Interactions - Paul H. Hemsworth 2011

The second edition of this book contains chapters that discuss the role of the stockperson in animal welfare, including attitudes, human-animal interactions, human and animal behaviour and improvement of human-animal interactions in animal production. This book is intended for those with an interest in human-animal interactions, including trainers, livestock farm managers, students and academics.

Shared Lives of Humans and Animals - Tuomas Räsänen 2017-04-21

Animals are conscious beings that form their own perspective regarding the lifeworlds in which they exist, and according to which they act in relation to their species and other animals. In recent decades a thorough transformation in societal research has taken place, as many groups that were previously perceived as being passive or subjugated objects have become active subjects. This fundamental reassessment, first promoted by feminist and radical studies, has subsequently been followed by spatial and material turns that have brought non-human agency to the fore. In human-animal relations, despite a power imbalance, animals are not mere objects but act as agents. They shape our material world and

our encounters with them influence the way we think about the world and ourselves. This book focuses on animal agency and interactions between humans and animals. It explores the reciprocity of human-animal relations and the capacity of animals to act and shape human societies. The chapters draw on examples from the Global North to explore how human life in modernity has been and is shaped by the sentience, autonomy, and physicality of various animals, particularly in landscapes where communities and wild animals exist in close proximity. It offers a timely contribution to animal studies, environmental geography, environmental history, and social science and humanities studies of the environment more broadly.

Animal Attractions - Elizabeth Hanson 2004-02-15

"Examines the meaning of nature in the city by looking at the ways zoos have assembled and displayed their animal collections."--Cover.

New Perspectives on Human-Animal Interactions - Sarah Knight 2009-09-01

Animals are important in human psychological and cultural life, and our relationships with other species are psychological and morally complicated. This special issue presents a series of original research articles concerning attitudes towards animals, the ethics of their treatment, the effects of companion animals on human health and psychological well-being, and the role that culture plays in our interactions with other species. The articles illustrate the scope of the new field of human-animal relationships, the variety of research approaches, and the implications of research findings for social policy.

Applied Psychology - E. Scott Geller 2016-02-24

Integrating humanism and behaviorism, this volume presents evidence-based techniques for improving health, safety, and well-being in all walks of life.

The Domestic Dog - James Serpell 1995

A scientific analysis of dogs, their behaviour, and their relationships with humans.

How Animals Affect Us - Peggy D. McCardle 2011

The findings in this volume deepen our understanding of human and

animal behavior, including the impact that pets can have on children's development and the efficacy of animal-assisted therapies.

The Social Neuroscience of Human-animal Interaction - Lisa S. Freund 2016

Our relationships with animals, as anyone with a beloved dog or cat knows, can be among the most significant in our lives. But why are we so attached to our pets? What kind of health, developmental, and psychological impacts do animals have on us? And what practical benefits -- for animals and humans alike -- can be gained from a deeper understanding of human-animal interactions? In this volume, a cross-disciplinary group of authors that includes behavioral psychologists, neuroscientists, geneticists, ethicists and veterinarians seek to understand human-animal interactions by applying research in the neurobiology and genetics that underlie human social functioning. Chapters describe the concepts and methodologies that social neuroscientists use to understand human social relationships, functioning, and the social bases of cognition, and apply these to understanding the role of animals in our lives. Authors present evolutionary and developmental perspectives, and weigh the implications of human-animal interactions research for animal welfare. Clinical applications include animal-assisted therapies for people with disabilities, acute or chronic health conditions, and social or emotional difficulties. Clear and accessible, this book is intended for a broad readership that includes clinicians, teachers, and anyone interested in how and why animals affect us the way they do.

Human-Animal Interactions in the Eighteenth Century - 2021-12-13

How did humans respond to the eighteenth-century discovery of countless new species of animals? This book explores the gamut of human-animal interactions: from love to cultural identifications, moral reflections, philosophical debates, classification systems, mechanical copies, insults and literary creativity.

The Oxford Handbook of Animal Studies - Linda Kalof 2017

Part I. Animals in the landscape of law, politics, and public policy. Animal rights / Gary Francione and Anna Charlton -- Animals in political theory /

Sue Donaldson and Will Kymlicka -- Animals as living property / David Favre -- The human-animal bond / James Serpell -- Animal sheltering / Leslie Irvine -- Roaming dogs / Arnold Arluke and Kate Atema -- Misothery : contempt for animals and nature, its origins, purposes, and repercussions / James B. Archaeozoology / Juliet Cluton-Brock -- Animals and ecological science / Anita Guerrini -- Staging privilege, proximity, and "extreme animal tourism" / Jane Desmond -- Commensal species / Terry O'Connor -- Lively cities : people, animals, and urban ecosystems / Marcus Owens and Jennifer Wolch -- Animals in religion / Stephen R.L. Clark.

Human/Animal Relationships in Transformation - Augusto Vitale
2022-02-11

The ethics of human/animal relationships is a growing field of academic research and a topic for public discussion and regulatory interventions from law-makers, governments and private institutions. Human/animal relationships are in transformation and understanding the nature of this process is crucial for all those who believe that the enlargement of moral

and legal recognition to nonhuman animals is part of contemporary moral and political progress. Understanding the nature of this process means analysing and critically discussing the philosophical, scientific and legal concepts and arguments embedded in it. This book contributes to the discussion by bringing together the ideas and reflections of leading experts from different disciplinary backgrounds and with a range of scientific perspectives. This book both provides an up-to-date examination of the transformation of human/animal relationships and presents ideas to foster this process.

In the Company of Animals - James Serpell 1996-08-13

What purpose, if any, do pets really serve? Are they simply an outlet for misplaced love? Or four-legged friends who help us to satisfy vital emotional needs? Whatever they are, when we elevate pets to the status of social companions, we undermine the distinction between human and non-human. In other words, pets force us to confront the moral contradictions inherent in our treatment of animals in general. Pursuing this idea to its logical conclusion, the author uncovers a fascinating and disturbing trail of myths, evasions and double standards which humans have used since earliest times to justify their subjugation of nature and other life forms. Through an exploration of the phenomenon of pet-keeping across history and between cultures, this thought-provoking study reassesses our relationships with animals and the natural world. This new edition of *In the Company of Animals* has been substantially revised and updated to take into account developments in research since the first edition was published in 1986.

Field and Laboratory Methods in Animal Cognition - Nereida Bueno-Guerra 2018-08-09

Leading researchers present current methodological approaches and future directions for a less anthropocentric study of animal cognition.

Considering Animals - Carol Freeman 2011

Considering Animals draws on the expertise of scholars trained in the biological sciences, humanities, and social sciences to investigate the complex and contradictory relationships humans have with nonhuman animals. Taking their cue from the specific "animal moments" that

punctuate these interactions, the essays engage with contemporary issues and debates central to human-animal studies: the representation of animals, the practical and ethical issues inseparable from human interactions with other species, and, perhaps most challengingly, the compelling evidence that animals are themselves considering beings. Case studies focus on issues such as animal emotion and human "sentimentality"; the representation of animals in contemporary art and in recent films such as *March of the Penguins*, *Happy Feet*, and *Grizzly Man*; animals' experiences in catastrophic events such as Hurricane Katrina and the SARS outbreak; and the danger of overvaluing the role humans play in the earth's ecosystems. From Marc Bekoff's moving preface through to the last essay, *Considering Animals* foregrounds the frequent, sometimes uncanny, exchanges with other species that disturb our self-contained existences and bring into focus our troubled relationships with them. Written in an accessible and jargon-free style, this collection demonstrates that, in the face of species extinction and environmental destruction, the roles and fates of animals are too important to be left to any one academic discipline.

[Made for Each Other](#) - Meg Daley Olmert 2010-02-23

Nothing turns a baby's head more quickly than the sight or sound of an animal. This fascination is driven by the ancient chemical forces that first drew humans and animals together. It is also the same biology that

transformed wolves into dogs and skittish horses into valiant comrades that would carry us into battle. *Made for Each Other* is the first book to explain how this chemistry of attraction and attachment flows through -- and between -- all mammals to create the profound emotional bonds humans and animals still feel today. Drawing on recent discoveries from neuroscience, evolutionary biology, behavioral psychology, archeology, as well as her own investigations, Meg Daley Olmert explains why the brain chemistry humans and animals trigger in each other also has a profound effect on our mental and physical well being. This lively and original investigation asks what happens when the bond is severed. If thousands of years of caring for animals infused us with a biology that shaped our hearts and minds, do we dare turn our back on it? Daley Olmert makes a compelling and scientific case for what our hearts have always known, that we were, and always will be, made for each other.

Human-Animal Studies: Anthropology - Margo DeMello 2010-10-01
One in the series of Human-Animal Studies ebooks produced as a result of the (printed) publication of the definitive HAS handbook, *Teaching the Animal: Human-Animal Studies across the Disciplines*. This chapter focuses on anthropology, includes three course syllabi, and has a full resources section covering all disciplines. Contains "Anthropology's Animals" by Molly Mullin.
