**How Molecular Forces and Rotating Planets Create Life** Jan Spitzer 2021-02-09 A reconceptualization of origins research that exploits a modern understanding of non-covalent molecular forces that stabilize living prokaryotic cells. Scientific research into the origins of life remains exploratory and speculative. Science has no definitive answer to the biggest questions--"What is life?" and "How did life begin on earth?" In this book, Jan Spitzer reconceptualizes origins research by exploiting a modern understanding of non-covalent molecular forces and covalent bond formation--a physicochemical approach propounded originally by Linus Pauling and Max Delbrück. Spitzer develops the Pauling-Delbrück premise as a physicochemical jigsaw puzzle that identifies key stages in life's emergence, from the formation of first oceans, tidal sediments, and proto-biofilms to progenotes, proto-cells and the first cellular organisms.

*No More War!* Linus Pauling 1983

**Linus Pauling and the Chemistry of Life** Thomas Hager 1998 Profiles the Nobel Prize-winning chemist who described the nature of chemical bonds, made important discoveries in the fields of quantum mechanics, immunology, and evolution, and used his scientific fame to help advance political causes.

**Linus Pauling** Clifford Mead 2008-03 One of the most brilliant scientists and most controversial individuals of the twentieth century, Linus Pauling was the only person to win two unshared Nobel Prizes. This unique volume, first published to mark the centenary of Pauling's birth, gathers his words and those of his contemporaries and students, together with photographs, drawings, and reproductions from the Pauling Papers. Pauling (1901-1994) was known for being outspoken and for leaping over scientific boundaries from physics to chemistry to biology to medical research. This collection draws a vivid portrait of a remarkable man'scientist, humanist, and activist?highlighting his larger-than-life personality and his singular achievements. As both scientist and citizen, Pauling was passionate and deeply thoughtful. He wrote *The Nature of the Chemical Bond*, one of the most cited sources in scientific history, and won the Nobel Prize in Chemistry in 1954. He risked his reputation during the McCarthy years as a vocal opponent of Cold War policies and nuclear proliferation. As a result, he was vilified by the press, investigated by the FBI, and awarded the 1962 Nobel Peace Prize. In the 1970s, Pauling again gained international recognition, this time for his advocacy of megadoses of vitamin C as a cure for cancer and cold prevention.

*Visions Of Linus Pauling* Christoffer Eric Petersen 2022-10-11 His life thrown into chaos by the death of his father in his youth, Linus Pauling persevered through an impoverished childhood to become one of the great scientists and humanitarians of the 20th century. In a stunningly original examination of the two-time Nobel Laureate, Oregon State University archivist Chris Petersen touches upon the major eras of Pauling's life and dials into specific episodes, themes, accomplishments, and failures at a level of detail that has not been put forth elsewhere. Topics exclusively covered here include Pauling's generative process as author of the groundbreaking text *The Nature of the Chemical Bond*; the colorful history of the Linus Pauling Institute; his symbiotic relationship with the W H Freeman & Co. publishing house; two entirely separate clashes with the United States Senate and the Soviet Academy of Science; and the story of his brilliant and troubled son Peter. Interspersed throughout the book are light pieces that narrate humorous moments in Pauling's life and other vignettes that lend insight into his seemingly maverick personality. The culmination of 15 years of research, *Visions of Linus Pauling* is a magisterial piece of work, equivalent to previously unseen footage of a blockbuster movie. **Linus Pauling in His Own Words** Barbara Marinacci 1995-10-30 Two-time Nobel Prize winner, Linus Pauling was known for his scientific discoveries and of his breadth of knowledge, which spanned disciplines. The author, who knew Pauling well, has chosen from among more than 60 years of essays, letters, articles, books, speeches and interviews. As Pauling himself says in the Introduction, "This book will take me as close to writing my memoirs or autobiography as I shall ever get".

**Neither Physics nor Chemistry** Kostas Gavroglu 2011-10-07 The evolution of a discipline at the intersection of physics, chemistry, and mathematics. Quantum chemistry—a discipline that is not quite physics, not quite chemistry, and not quite applied mathematics—emerged as a field of study in the 1920s. It was referred to by such terms as mathematical chemistry, subatomic theoretical chemistry, molecular quantum mechanics, and chemical physics until the community agreed on the designation of quantum chemistry. In *Neither Physics Nor Chemistry*, Kostas Gavroglu and Ana Simões examine the evolution of quantum chemistry into an autonomous discipline, tracing its development from the publication of early papers in the 1920s to the dramatic changes brought about by the use of computers in the 1970s. The authors focus on the culture that emerged from the creative synthesis of the various traditions of chemistry, physics, and mathematics. They examine the concepts, practices, languages, and institutions of this new culture as well as the people who established it, from such pioneers as Walter Heitler and Fritz London, Linus Pauling, and Robert Sanderson Mulliken, to later figures including Charles Alfred Coulson, Raymond Daudel, and Per-Olov Löwdin. Throughout, the authors emphasize

six themes: epistemic aspects and the dilemmas caused by multiple approaches; social issues, including academic politics, the impact of textbooks, and the forging of alliances; the contingencies that arose at every stage of the developments in quantum chemistry; the changes in the field when computers were available to perform the extraordinarily cumbersome calculations required; issues in the philosophy of science; and different styles of reasoning.

*Linus Pauling* Victoria Sherrow 1997 Examines the life and accomplishments of scientist and humanitarian Linus Pauling, known for his work on vitamins and environmental safety.

*Linus Pauling* Tom Hager 2000-06-01 Linus Pauling was the most important chemist, and arguably the most important American scientist, of the 20th century. From his description of the chemical bond to his discovery of the cause of sickle-cell anemia and his groundbreaking work with vitamin C, his work stretched the boundaries of chemistry, physics, biology, immunology, and more. Acclaimed science writer Tom Hager brings Pauling's wide range of scientific accomplishments vividly to life while also shedding light on Pauling's activities outside the scientific realm. He shows how Pauling used his popularity to advance political causes, particularly his opposition to the spread of nuclear weapons during the 1950s. Despite the troubles his political activism caused him, he remained unmoved in his dedication to making the world a safer place. His perseverance was rewarded with a Nobel Peace Prize in 1962, which along with his 1954 Nobel Prize in Chemistry, made him the only person in history to win two unshared Nobels. Oxford Portraits in Science is an on-going series of scientific biographies for young adults. Written by top scholars and writers, each biography examines the personality of its subject as well as the thought process leading to his or her discoveries. These illustrated biographies combine accessible technical information with compelling personal stories to portray the scientists whose work has shaped our understanding of the natural world.

**Vital Forces** Graeme K. Hunter 2000-11-03 Vital Forces tells the history of the 'biochemical revolution', a period of unprecedentedly rapid advance in human knowledge that profoundly affected our view of life and laid the foundation for modern medicine and biotechnology. The story is told in a clear, engaging, and absorbing manner. This delightful work relates the fascinating and staggering advances in concepts and theories over the last 200 years and introduces the major figures of the times. Vital Forces also describes the discovery of the molecular basis of life through the stories of the scientists involved, including such towering figures as Louis Pasteur, Gregor Mendel, Linus Pauling, and Francis Crick. Combining science and biography into a seamless chronological narrative, the author brings to life the successes and failures, collaborations and feuds, and errors and insights that produced the revolution in biology. \* Vividly describes dramatic scientific discoveries, personalities, feuds and rivalries \* Answers a general readers quest to understand the nature of life, and the relevance of biochemistry/molecular biology to modern medicine, industry and agriculture.

**Chemical Achievers** Mary Ellen Bowden 1997 This book was designed to help teachers supplement science curricula with human stories of discovery in the chemical sciences. Chemical Achievers presents the lives and work of two types of achievers. First are the historical greats, those chemical scientists most often referred to in introductory courses. Second are those scientists who made contributions in areas of the chemical sciences that are of special relevance to modern life and the career choices students will make. The human faces summarized in this book range from Robert Boyle to Glenn Seaborg and Stephanie Kwolek. In this lively and comprehensive collection of photographs and biographies, Bowden illuminates how much the chemical sciences owe to the individual achiever. Over 150 images can be easily reproduced as overhead transparencies or other visual teaching aids.

**Dr. Joe and What You Didn't Know: 177 Fascinating Questions about the Chemistry of Everyday Life (Large Print 16pt)** Joe Schwarcz 2012-12-27 Linus Pauling, one of the most celebrated scientists of the twentieth century, once remarked that satisfying curiosity is one of the greatest sources of pleasure in life. "Dr. Joe and What You Didn't Know" to act as both the source and satiation of such curiosity, providing pleasure through a series of 99 chemistry - related questions and answers designed to both inform and entertain. Ranging from the esoteric to the everyday, Dr. Joe Schwarcz tackles topics from Beethoven's connection to plumbing to why rotten eggs smell like rotten eggs. How did a sheep, a duck, and a rooster usher in the age of air travel? What jewelry metal is prohibited in some European countries? What does Miss Piggy have to do with the World Cup? And is there really any danger in eating green potatoes? Whimsical though these questions may be, their answers are revealed in an accessible scientific fashion. In addition to a few chuckles and some scientific savvy, "Dr. Joe and What You Didn't Know" provides the reader with sound practical advice. You'll learn how to prevent brown sugar from lumping and why thin French fries may be healthier than fat ones. The secrets behind windshield washer fluid and "carbonless" carbon paper are revealed. And if you didn't know how to remove a cockroach from your ear, Dr. Joe will give you some guidance. That advice alone might prove worth the price of the book.

*How to Live Longer and Feel Better* Linus Pauling 2006 "Pauling's simple, inexpensive plan suggests avoiding sugar, stress, and smoking, working in a job that you like, and being happy with your family. To avoid serious illness and enjoy a longer life, he recommends taking vitamins for optimum health and as insurance against disease."--P. [4] of cover.

**Voyage Through Time** Ahmed Zewail 2004-01-01 From a beginning in an Egyptian Delta town and the port of Alexandria to the scenic vistas of sunny southern California, Ahmed Zewail takes us on a voyage through time his own life and the split-second world of the femtosecond. In this engaging exposé of his life and work until his receipt of the Nobel Prize in 1999, Zewail explores in non-technical language the landscape of molecules glimpsed on the scale of one quadrillionth of a second: the femtosecond, 0. 000 000 000 000 001 second. Zewail enriches the journey into the strange territory of femtochemistry with insightful analogies and illustrations to aid both the general reader and the scientifically inclined. He likewise draws lessons from his life story so far, and he meditates on the impact the revolution in science has had on our modern world in both developed and developing countries. He suggests a concrete course of action for the world of the have-nots, and ends the book with hope for Egypt in developing the nation's greatest natural resource its youth to build a more promising future, and for America to develop a new vision domestically and internationally.

[Perspectives on Chemical Biography in the 21st Century](#) Isabel Malaquias 2019-01-14 Overlooked, even despised by historians of chemistry for many years, the genre of biography has enjoyed a revival since the beginning of this century. The key to its renaissance is the use of the biographical form to provide a contextual analysis of important themes in contrast to the uncritical, almost hagiographic, lives of chemists written in the earlier part of the twentieth century. Bringing together the contributions of scholars active in several different countries, Perspectives on Chemical Biography in the 21st Century leads the reader through emerging questions around sources, and the generic problems faced by authors of biographies, before

moving on to discuss aspects more related with physical, theoretical and inorganic chemistry, and facets of 19th century chemistry. In contrast to the letters and diaries of earlier chemists, we are now faced with scientists who communicate by telephone and email, and compose their documents on computers. Are we facing a modern equivalent of the destruction of the Library of Alexandria where all our sources are wiped out electronically?

**Genesis** Jan Sapp 2003-09-11 *Genesis: The Evolution of Biology* presents a history of the past two centuries of biology, suitable for use in courses, but of interest more broadly to evolutionary biologists, geneticists, and biomedical scientists, as well as general readers interested in the history of science. The book covers the early evolutionary biologists-Lamarck, Cuvier, Darwin and Wallace through Mayr and the neodarwinian synthesis, in much the same way as other histories of evolution have done, bringing in also the social implications, the struggles with our religious understanding, and the interweaving of genetics into evolutionary theory. What is novel about Sapp's account is a real integration of the cytological tradition, from Schwann, Boveri, and the other early cell biologists and embryologists, and the coverage of symbiosis, microbial evolutionary phylogenies, and the new understanding of the diversification of life coming from comparative analyses of complete microbial genomes. The book is a history of theories about evolution, genes and organisms from Lamarck and Darwin to the present day. This is the first book on the general history of evolutionary biology to include the history of research and theories about symbiosis in evolution, and first to include research on microbial evolution which were excluded from the classical neo-Darwinian synthesis. Bacterial evolution, and symbiosis in evolution are also excluded from virtually every book on the history of biology.

**Climbing the Limitless Ladder** Chintamani Nagesa Ramachandra Rao 2010 This invaluable book is an autobiographical account of doing scientific research in India. It provides an insight to the perseverance of a scientist from a developing country. His relentless pursuit of excellence in chemistry for more than half a century is a remarkable source of inspiration to young scientists facing modern-day challenges.

**Light is a Messenger** Graeme K. Hunter 2004-08-12 Sir Lawrence Bragg was only 25 when he won the 1915 Nobel Prize in Physics - the youngest person ever to win a Nobel Prize. Bragg won the Nobel Prize for discovering how to use X-rays to determine the atomic structures of crystals and molecules. This book is the biography of Bragg, who struggled to emerge from the shadow of his father.

**Force of Nature** Thomas Hager 1995 In this thoroughly researched biography of one of the greatest American scientists of this century--the only person ever to win two unshared Nobel Prizes--Hager had the full cooperation of his subject, plus unrestricted access to Pauling's personal papers. of photos.

**From Strange Simplicity to Complex Familiarity** Manfred Eigen 2013-05-23 This book presents a vivid argument for the almost lost idea of a unity of all natural sciences. It starts with the "strange" physics of matter, including particle physics, atomic physics and quantum mechanics, cosmology, relativity and their consequences (Chapter I), and it continues by describing the properties of material systems that are best understood by statistical and phase-space concepts (Chapter II). These lead to entropy and to the classical picture of quantitative information, initially devoid of value and meaning (Chapter III). Finally, "information space" and dynamics within it are introduced as a basis for semantics (Chapter IV), leading to an exploration of life and thought as new problems in physics (Chapter V). Dynamic equations - again of a strange (but very general) nature - bring about the complex familiarity of the world we live in. Surprising new results in the life sciences open our eyes to the richness of physical thought, and they show us what can and what cannot be explained by a Darwinian approach. The abstract physical approach is applicable to the origins of life, of meaningful information and even of our universe.

**Amazing Scientists** Charles Margerison 2011-04-19 What would Charles Darwin say if he was interviewed about his life and work? **László Zechmeister** Michaela Wirth 2013-09-18 László Zechmeister was one of the pioneers in chromatography. He recognized the potential of the chromatographic method and made extensive use of it for his research about natural products. In 1938 he founded the book series "Progress in the Chemistry of Organic Natural Products" which includes review articles on contemporary research by masters in their fields of expertise. This text casts light on his life and his pioneering role in chromatography and provides more detailed insight on the book series.

**Spinach On The Ceiling: The Multifaceted Life Of A Theoretical Chemist** Martin Karplus 2020-06-22 'Karplus's tales of a turbulent graduate school experience at Caltech will inspire readers to muster fortitude when everything seems to be spinning out of control. Karplus balances rigorous scientific discussions with refreshing chapters expounding his passion for photography and gastronomy.' *Nature Chemistry*, May 2020 Nobel Laureate Martin Karplus was eight when his family fled Nazi-occupied Austria via Switzerland and France for the United States. He would later credit his life as a refugee as a decisive influence on his world view and approach to science. *Spinach on the Ceiling* is an autobiographical telling of Karplus' life story, and how it led him to win the Nobel Prize in Chemistry in 2013. The book captures pivotal moments in Martin's life — from his escape to Switzerland in 1938 shortly after Hitler's entrance into Austria; to memorable moments like when his parents gave him a microscope which opened his eyes to the wonders of science; to his education in New England and California; and his eventual scientific career which took him to England, Illinois, Columbia, Strasbourg, and Harvard. It relates how Martin's optimistic outlook and belief in his vision made it possible for him to overcome setbacks in his life, and turn a subject of study his colleagues considered a waste of time into a central part of chemistry and structural biology. It is his hope to inspire and aid young readers, in particular, to have a successful trajectory in their own lives. Although research and teaching have been his primary focus, he has traveled the world photographing people and places with a Leica IIC and has had numerous exhibitions of the photographs. He has also enjoyed a lifelong interest in cooking and worked in some of the best restaurants in France and Spain.
