Umbr(a): Sameness -

Life Ascending - Nick Lane 2010-10-01

Winner of the 2010 Royal Society Prize for science books Powerful new research methods are providing fresh and vivid insights into the makeup of life. Comparing gene sequences, examining the atomic structure of proteins and looking into the geochemistry of rocks have all helped to explain creation and evolution in more detail than ever before. Nick Lane uses the full extent of this new knowledge to describe the ten greatest inventions of life, based on their historical impact, role in living organisms today and relevance to current controversies. DNA, sex, sight and consciousnesses are just four examples. Lane also explains how these findings have come about, and the extent to which they can be relied upon. The result is a gripping and lucid account of the ingenuity of nature, and a book which is essential reading for anyone who has ever questioned the science behind the glories of everyday life.

Human Dignity and Human Cloning - Silja Vöneky 2004-12-01

"Human Dignity and Human Cloning" contains contributions by philosophers, theologians and lawyers on legal and ethical questions concerning the reproductive and therapeutic cloning of human beings. The main focus lies on the admissibility of cloning in German Constitutional law as well as in public international law. As these legal questions cannot be answered without taking account of the ethical discussion, the topic is analyzed from different cultural and religious viewpoints.

Perfect Copy - Jonathan Agar 2009-09-03

Cloning is some of the most exciting science and one of the most keenly fought moral debates of our time. Perfect Copy is a uniquely accessible exploration this most vexed and pressing issue. In 1997 Ian Wilmut and his team announced that they had done what many thought to be impossible. They had cloned a mammal from an adult cell. This breakthrough prompted immediate calls for the new technology of mammalian cloning to be used on humans. Italian fertility specialist Severino Antinori hopes to use cloning 'within two years' to give 200 infertile couples the opportunity to at last become parents. Cloning may also solve, once and for all, the problem of rejection that bedevils transplant surgery. Perhaps it even holds the promise of eternal life. But plans to clone humans have triggered a storm of protest. Scientists including Wilmut, politicians from left and right, and theologians from almost all religions find the idea abhorrent. We cannot possibly decide who is right in this debate unless we have a good understanding of what a human clone is and how one would be created. Nicholas Agar unravels the science - and the ethics - of cloning and begins to show how we should approach this fantastically problematic area.

Biology of Sex - Alex Mills 2018-01-01

This text explains the biological aspects of human sex by using direct and intriguing comparisons with the many variations in sexual systems

among non-human organisms.

Who's Afraid of Human Cloning? - Gregory E. Pence 1998-11-05

Human cloning raises the most profound questions about human nature, our faith in ourselves, and our ability to make decisions that could significantly alter the character of humanity. In this exciting and accessible book, Gregory Pence offers a candid and sometimes humorous look at the arguments for and against human cloning. Originating a human being by cloning, Pence boldly argues, should not strike fear in our hearts but should be examined as a reasonable reproductive option for couples. Pence considers how popular culture has influenced the way we think about cloning, and he presents a lucid and non-technical examination of the scientific research and relevant moral issues in the cloning debate. This book is a must-read for anyone who is concerned about the impact of technology on human life and for those with interests in medical ethics, sociology, and public policy.

Mother Nature Is Trying to Kill You - Dan Riskin 2014-03-04

A fun exploration of the darker side of the natural world reveals the fascinating, weird, often perverted ways that Mother Nature feeds only for herself. It may be a wonderful world, but as Dan Riskin (cohost of Discovery Canada's Daily Planet) explains, it's also a dangerous, disturbing, and disgusting one. At every turn, it seems, living things are trying to eat us, poison us, use our bodies as their homes, or have us spread their eggs. In *Mother Nature Is Trying to Kill You*, Riskin is our guide through the natural world at its most gloriously ruthless. Using the seven deadly sins as a road map, Riskin offers dozens of jaw-dropping examples that illuminate how brutal nature can truly be. From slothful worms that hide in your body for up to thirty years to wrathful snails with poisonous harpoons that can kill you in less than five minutes to lustful ducks that have orgasms faster than you can blink, these fascinating accounts reveal the candid truth about "gentle" Mother Nature's true colors. Riskin's passion for the strange and his enthusiastic expertise bring Earth's most fascinating flora and fauna into vivid focus. Through his adventures— which include sliding on his back through a thick soup of bat guano just to get face-to-face with a vampire bat, befriending a parasitic maggot that has taken root on his head, and coming to grips with having offspring of his own—Riskin makes unexpected discoveries not just about the world all around us but also about the ways this brutal world has shaped us as humans and what our responsibilities are to this terrible, wonderful planet we call home.

Cloning After Dolly - Gregory E. Pence 2004

In a new book building on his classic *Who's afraid of Human Cloning?* Pence continues to advocate a reasoned view of cloning.

Human Cloning - Barbara MacKinnon 2000

From this collection, readers will gain a clearer picture of the history of cloning in agriculture and animal science, the various biological procedures that are encompassed by the term "cloning," the philosophical arguments in support of and opposed to cloning humans,

and the considerations that should inform discussions about public policy matters related to cloning research and to human cloning itself.

Sex is So Good [sic], why Clone? - Hwa A. Lim 2004

The Masterpiece of Nature : - Graham Bell 1982

Multiplicity Yours -

Sex and Death - Kim Sterelny 1999-06-15

In this introduction to philosophy of biology, Kim Sterelny and Paul E. Griffiths present both the science and the philosophical context necessary for a critical understanding of the debates shaping biology at the end of the 20th century.

Clone Baby - Caroline De Costa 2006

Cloning people is wrong. Its forbidden by law. No responsible scientist would dream of trying it... Or would they?

Scientific and Medical Aspects of Human Reproductive Cloning - National Research Council 2002-06-17

Human reproductive cloning is an assisted reproductive technology that would be carried out with the goal of creating a newborn genetically identical to another human being. It is currently the subject of much debate around the world, involving a variety of ethical, religious, societal, scientific, and medical issues. *Scientific and Medical Aspects of Human Reproductive Cloning* considers the scientific and medical sides of this issue, plus ethical issues that pertain to human-subjects research. Based on experience with reproductive cloning in animals, the report concludes that human reproductive cloning would be dangerous for the woman, fetus, and newborn, and is likely to fail. The study panel did not address the issue of whether human reproductive cloning, even if it were found to be medically safe, would be "or would not be" acceptable to individuals or society.

Advances in Molecular Ecology - Gary R. Carvalho 1998

Each contributor to this publication was asked to examine how molecular genetic tools have contributed to their specific areas of consideration. To increase the practical utility of the book, a summary of software that is available for the analysis of data in molecular ecology is included.

Consciousness Evolving - James H. Fetzer 2002-01-01

A collection of stimulating studies on the past, the present, and the future of consciousness, *Consciousness Evolving* contributes to understanding some of the most important conceptual problems of our time. The advent of the modern synthesis together with the human genome project affords a platform for considering what it is that makes humans distinctive. Beginning with an essay that accents the nature of the problem within a behavioristic framework and concluding with reflections on the prospects for a form of immortality through serial cloning, the chapters are divided into three sections, which concern how and why consciousness may have evolved, special capacities involving language, creativity, and mentality as candidates for evolved adaptations, and the prospects for artificial evolution through the design of robots with specific forms of consciousness and mind. This volume should appeal to every reader who wants to better understand the human species, including its distinctive properties and its place in nature. (Series A)

Principles of Cloning - Jose Cibelli 2013-09-24

Principles of Cloning, Second Edition is the fully revised edition of the authoritative book on the science of cloning. The book presents the basic

biological mechanisms of how cloning works and progresses to discuss current and potential applications in basic biology, agriculture, biotechnology, and medicine. Beginning with the history and theory behind cloning, the book goes on to examine methods of micromanipulation, nuclear transfer, genetic modification, and pregnancy and neonatal care of cloned animals. The cloning of various species—including mice, sheep, cattle, and non-mammals—is considered as well. The Editors have been involved in a number of breakthroughs using cloning technique, including the first demonstration that cloning works in differentiated cells done by the Recipient of the 2012 Nobel Prize for Physiology or Medicine - Dr John Gurdon; the cloning of the first mammal from a somatic cell - Drs Keith Campbell and Ian Wilmut; the demonstration that cloning can reset the biological clock - Drs Michael West and Robert Lanza; the demonstration that a terminally differentiated cell can give rise to a whole new individual - Dr Rudolf Jaenisch and the cloning of the first transgenic bovine from a differentiated cell - Dr Jose Cibelli. The majority of the contributing authors are the principal investigators on each of the animal species cloned to date and are expertly qualified to present the state-of-the-art information in their respective areas. First and most comprehensive book on animal cloning, 100% revised Describes an in-depth analysis of current limitations of the technology and research areas to explore Offers cloning applications on basic biology, agriculture, biotechnology, and medicine

Critical Posthumanism: Cloned, Toxic and Cyborg Bodies in Fiction - Pelin Kümbet 2020-12-25

Focusing on three representation of posthuman bodies as cloned bodies in Kazuo Ishiguro's *Never Let Me Go* (2005), toxic bodies in Indra Sinha's *Animal's People* (2007), and cyborg bodies in Justina Robson's *Natural History* (2004) from the theoretical perspectives of posthuman definition of what it means to be human, this study discusses the changing concept of the body. In this context, the integral and dynamic connection between a human body and the world is of special significance, which opens up new possibilities to reconfigure the human body that is no longer conceded separate from the nonhuman world but embodied in it. Each of the novels significantly displays the in-betweenness of humans by making them interact with chemical substances, machines, and other nonhuman entities, and shows how clear-cut distinctions between the human and the nonhuman bodies have collapsed.

The Vital Question - Nick Lane 2015-04-23

Why is life the way it is? Bacteria evolved into complex life just once in four billion years of life on earth-and all complex life shares many strange properties, from sex to ageing and death. If life evolved on other planets, would it be the same or completely different? In *The Vital Question*, Nick Lane radically reframes evolutionary history, putting forward a cogent solution to conundrums that have troubled scientists for decades. The answer, he argues, lies in energy: how all life on Earth lives off a voltage with the strength of a bolt of lightning. In unravelling these scientific enigmas, making sense of life's quirks, Lane's explanation provides a solution to life's vital questions: why are we as we are, and why are we here at all? This is ground-breaking science in an accessible form, in the tradition of Charles Darwin's *The Origin of Species*, Richard Dawkins' *The Selfish Gene*, and Jared Diamond's *Guns, Germs and Steel*.
