

Sex Hormone Binding Globulin Decrease

Clinical Chemistry - William J. Marshall 2008-01-01

The sixth edition of this clinical chemistry text covers topics such as biochemical tests in clinical medicine; hydrogen ion homeostasis and blood gases; thyroid gland; gonads; disorders of carbohydrate metabolism; and plasma proteins and enzymes.

Steroid Binding to Sex Hormone-binding Globulin - Anie Philip 1986

Natural Hormone Balance for Women - Uzzi Reiss 2002

An easy-to-follow anti-aging program draws on the principles of natural hormone replacement to promote a healthier, younger-looking skin, weight control, muscle tone, enhanced energy and sexual function, better sleep habits, balanced moods, better memory, and more. Reprint.

The Treatment of Epilepsy - Simon Shorvon 2008-04-15

In recent years, there have been rapid advances both in medical and surgical treatments of epilepsy. This book provides a comprehensive textbook on medical and surgical treatment of epilepsy, and acts as a clinical reference book with a strong practical bias.

Clinical Gynecology - Eric J. Bieber 2015-04-23

Written with the busy practice in mind, this book delivers clinically focused, evidence-based gynecology guidance in a quick-reference format. It explores etiology, screening, tests, diagnosis, and treatment for a full range of gynecologic health issues. The coverage includes the full range of gynecologic malignancies, reproductive endocrinology and infertility, infectious diseases, urogynecologic problems, gynecologic concerns in children and adolescents, and surgical interventions including minimally invasive surgical procedures. Information is easy to find and absorb owing to the extensive use of full-color diagrams, algorithms, and illustrations. The new edition has been expanded to

include aspects of gynecology important in international and resource-poor settings.

Androgens and the Aging Male - B.J. Oddens 1996-11-15

While menopause in women is a well-established and well documented phenomenon, the andropause in men is a relatively new concept. The terms male menopause and andropause suggest that this is an abrupt phenomenon related to a sudden deprivation of sex hormones. Unlike the menopause, which has a relatively sudden onset, the andropause appears to be a gradual process. It has been hypothesized that an androgen deficiency might develop with aging. *Androgens and the Aging Male* explores this hypothesis. The book focuses on the gradually progressive problems related to the decline in androgens that can occur with advancement of age. It examines the debate about the extent to which an age-dependent decline in androgens leads to health problems that affect or impair the quality of life, and the theory behind it. In addition, it reviews studies evaluating the effects of androgen supplementation. *Androgens and the Aging Male* comprehensively covers androgen function and how it changes over time.

Polycystic Ovary Syndrome - Andrea Dunaif 2008-01-12

This volume includes the latest diagnostic criteria for PCOS and comprises the most up-to-date information about the genetic features and pathogenesis of PCOS. It critically reviews the methodological approaches and the evidence for various PCOS susceptibility genes. The book also discusses additional familial phenotypes of PCOS and their potential genetic basis. All four editors of this title are extremely prominent in the field of PCOS.

Andropathy - R.A.S Hemat 2003-03-02

Andropathy is an authoritative guide to Males related diseases and

integrated medicine. *Andropathy* is an advanced medical textbook. This book begins by showing you how to implement your biology, pathobiology, and physiology into practical simple approach to every male client you meet. This book was written for medical student, resident and professional in medicine and practitioners. The author had adapted his proven teaching strategies into a unique approach that makes integrated medicine accessible, and provides the foundations for understanding medicine based upon the principles of structural pathobiology. *Andropathy* presents well integrated and practical approach to male related diseases. It is a versatile retrievable ebook. *Andropathy* provides the reader with current concepts of the pathobiology and interventions for diseases. *Andropathy* is based on the extensive international clinical and teaching experience of the author, both in traditional and integrated systems of medical schools.

The Genetics of Sex Hormones and Their Effects on

Mammographic Density in Women - Cameron B. Haas 2021

In this work we leveraged genomic information from large-scale population-based studies to explore the relationships between three epidemiologic factors associated with breast cancer in women: 1) mammographic density, 2) sex hormone concentrations, and 3) body mass index (BMI). Mammographic density, which describes the proportion of dense (i.e., epithelial and stromal) tissue in the breast, is one of the strongest predictors of breast cancer in women. Women with extremely dense breasts have a 3 to 6-fold increased risk of breast cancer compared to those with primarily fatty breasts. Breast cancer is generally considered to be a primarily hormone-driven cancer, an attribute that has led to the development of effective treatment and prophylactic strategies for hormone receptor positive subtypes and cause for investigating the role of endogenous hormones in breast cancer etiology. Finally, BMI has been consistently observed to have paradoxical associations with breast cancer across menopause, with evidence of preventative effects associated with higher BMI in premenopausal women but increased risk in postmenopausal women. We first built on recent analyses that investigated the genetic architecture of testosterone

and sex hormone binding globulin (SHBG) in men and women of European ancestry by conducting genome-wide association studies (GWAS) of estradiol concentrations in women. Additionally, we investigated the generalizability of previous findings in women of African ancestry. We further conducted menopausal status specific GWAS of these sex hormones to identify loci with heterogeneous effects across menopause. We found that the strongest overall genetic predictor of testosterone concentrations, located in the CYP3A7 gene, had an effect nearly twice as large in premenopausal women compared to postmenopausal women. Similarly, genetic variants in the AKR1C4 gene were strongly associated with concentrations of SHBG in premenopausal women, but not in postmenopausal women, with a 5-fold difference in effect estimates between the two. We also estimated the shared heritability across menopausal status specific hormone concentrations, and observed a relatively low genetic correlation between pre- and postmenopausal detectable levels of estradiol, whereas comparisons of pre- and postmenopausal shared heritability for SHBG and testosterone were both close to one, indicating near identical genetic architectures. We performed gene-level tests for enrichment of genetic associations within tissue-specific gene expressions by collapsing multiple SNP-level associations in a gene while accounting for linkage disequilibrium. Using this gene-set analysis for tissue specificity we observed a change from strong adrenal gland tissue specificity of testosterone in premenopausal to adipose tissue specificity in postmenopausal women, suggesting that adiposity may play a more important role in determining circulating concentrations of testosterone after menopause. To understand the directional relationships between overall and menopausal status specific concentrations of sex hormones and BMI on mammographic dense and non-dense area we performed Mendelian Randomization analyses. We created menopausal status specific genetic instruments for SHBG, testosterone, and estradiol based on our previous work. We obtained single nucleotide polymorphisms (SNP)-specific association statistics from a recent GWAS of mammographic density of up to 27,900 women of European ancestry. Effect estimates for BMI were obtained from the

largest meta-GWAS of BMI to date, comprising more than 700,000 individuals. We observed an inverse relationship between overall genetically predicted testosterone and dense area. Increasing genetically predicted BMI was strongly associated with an increase in genetically predicted non-dense area, as previously observed. However, we also observed an inverse association between genetically predicted BMI and absolute dense area, which might explain some of the reduced risk of breast cancer associated with an increase in genetically predicted BMI. Higher genetically predicted BMI was also strongly associated with decreasing SHBG concentrations, as well as increasing concentrations of testosterone. Based on the inverse-variance weighted results, we observed increasing genetically predicted BMI to be associated with a decrease in genetically predicted detectable levels of overall and premenopausal specific estradiol concentrations, but not for postmenopausal only. Multivariable MR approaches for the association of BMI and mammographic density adjusting for sex hormones did not substantively change the effect estimates of BMI. Building on the strong association between BMI and mammographic density, we sought to identify genetic loci that interact with BMI to alter mammographic density phenotypes. We conducted genome-wide tests for the interaction between SNPs and BMI on percent mammographic density, absolute dense area, and absolute non-dense area in 14,837 women. Despite having the largest sample size to date with genetic and phenotypic data for mammographic density, we did not find any loci that reached standard Bonferroni correction for statistical significance. This work presents novel findings of the unique genetic architectures of menopausal specific concentrations of sex hormones in women and extends these findings to investigate their associations with mammographic density. We show that BMI plays an important role in determining not only non-dense area, but also dense area and a possibly separate mechanism for breast cancer etiology. Additionally, there is evidence based on our MR approaches of a regulatory role of BMI on endogenous estradiol as yet another possible pathway to tumorigenesis. We did not identify any genetic variant that has a strong modifying effect

of BMI on mammographic density phenotypes. It is possible that larger studies are merited to investigate the interactions between germline genetic variants and BMI on mammographic density variation.

Degroot's Endocrinology, E-Book - R Paul Robertson 2023-02-06 Thoroughly updated to reflect today's recent advances in adult and pediatric endocrinology, DeGroot's Endocrinology, 8th Edition, remains the comprehensive, international reference of choice for today's endocrinologists and fellows. A full peer review of the previous edition, conducted by a largely new group of renowned editors, was used to update this trusted, two-volume resource. In-depth coverage of both basic and clinical aspects of endocrinology and up-to-date information on the treatment and management of endocrine disorders are provided by a diverse group of expert contributors from six continents. A full-color format and helpful algorithms summarize clinical decision-making and practical approaches to patient management. Organizes content by all the glands that regulate the endocrine system while integrating basic science and clinical presentations of disease. Includes new chapters: Anatomy and Physiology of the Hypothalamus and Pituitary, Differentiated Thyroid Cancer, Medullary Thyroid Cancer, Drugs that Affect Thyroid Function, Genetic Disorders of the Adrenal Cortex, Adrenal Pathology, Primary Aldosteronism, Transgender Healthcare, Erectile Dysfunction, Prevalence and Causes of Male Infertility, Sexual Dysfunction in the Female, Glucose Toxicity and Oxidative Stress. Emphasizes basic science and evidence-based practice throughout. Features extensive updates to content on thyroid and adrenal dysfunction, endocrine-disrupting chemicals and human disease, clinical management of diabetes, and advances in genetics. Includes algorithms to outline effective treatment protocols. Contains new emphasis boxes that highlight key points in each chapter.

A Pilot Study on Investigation of Chinese Medicinal Classification and Its Relationship with Hormones in Menopausal Women - Lam Lam
2017-01-26

This dissertation, "A Pilot Study on Investigation of Chinese Medicinal Classification and Its Relationship With Hormones in Menopausal

Women" by Lam, Lam, [], was obtained from The University of Hong Kong (Pokfulam, Hong Kong) and is being sold pursuant to Creative Commons: Attribution 3.0 Hong Kong License. The content of this dissertation has not been altered in any way. We have altered the formatting in order to facilitate the ease of printing and reading of the dissertation. All rights not granted by the above license are retained by the author. Abstract: Objective: To develop a validated questionnaire for the assessment of menopausal syndrome in Chinese Medicine and through the analysis of the basic menopausal syndrome classification in Chinese Medicine to explore the use of objective hormone markers as one of the evidence for the Chinese Medicinal classification and guidance for application of herbal medicines by Chinese Medicine Practitioners. Methods: The major symptoms related to typical syndromes of menopause were extracted from Chinese Medicine textbook, international diagnostic guide of Chinese Medicine, classic and contemporary literature of Chinese Medicine and subjective symptoms were eliminated to facilitate the administrate of a self-reported outcome questionnaire. The symptoms related to menopause in Chinese Medicine were identified and redefined to improve the content validity. A total of 353 menopausal women were included in the study. Participants were assessed through face-to-face interview by registered Hong Kong Chinese Medicine Practitioner to complete the questionnaire and serum samples for hormones measurement were collected after an overnight fast in the morning of the assessment day. Serum Estradiol (E2), Testosterone (T), Progesterone (P), Luteinizing Hormone (LH), Follicle Stimulating Hormone (FSH) and Sex-Hormone Binding Globulin (SHBG) were measured by electrochemiluminescence immunoassays (ECLIA). Free estradiol (fE2), non-Sex-Hormone Binding Globulin bound Estradiol (non-SHBG-E2), free Testosterone (fT), and non-Sex-Hormone Binding Globulin bound Testosterone (non-SHBG-T) were calculated to assess hormone availability and activity. E2/T ratio was also calculated to investigate the balance of E2 and T in the body. Results: Principal Component Analysis (PCA) was conducted. Symptoms related to Deficiency of Yin and symptoms related to Deficiency of Yang were

extracted and the relationship between the syndromes and E2, T, P, LH, FSH, SHBG, fT, non-SHBG-T, fE2, non-SHBG-E2 and E2/T ratio were investigated. For symptoms related to Deficiency of Yin, E2 (ppppor little with moderate and severe presentation of symptoms. For symptoms related to Deficiency of Yang, SHBG (p=0.042, p=0.002, pshowed an increase, fT (p=0.044, p=0.049, p=0.003) and non-SHBG-T (p=0.044, p=0.049, p=0.003) showed a decrease which was significant for other three groups while comparing to the no or little group. Conclusion: Menopausal Syndrome Questionnaire was developed and validated in the study. Major syndromes and symptoms involved in the diagnosis of menopausal syndrome in Chinese Medicine were identified and good test-retest reliability was also demonstrated. From the result, we hypothesize that the presentation of symptoms related to Deficiency of Yin may be closely correlated with the menopausal transition in Western Medicine and the presentation of symp

Physician Assistant Review Guide - David Paulk 2010-10-25

Physician Assistant Review Guide is a comprehensive overview for physician assistants preparing for the Physician Assistant National Certifying or Re-certifying exam. This guide extensively covers every topic PAs need to know, including cardiology, dermatology, emergency medicine, infectious diseases, neurology, oncology, pediatrics, women's health, and more. Also features a straightforward question format with questions designed for both new graduates and practicing clinicians, as well as test-taking strategies, detailed illustrations and photographs, explanations to the answers with accompanying artwork, and clear connections between the best evidence-based clinical practice and subject matter testing.

Food and Nutrients in Disease Management - Ingrid Kohlstadt 2016-04-19

Food and nutrients are the original medicine and the shoulders on which modern medicine stands. But in recent decades, food and medicine have taken divergent paths and the natural healing properties of food have been diminished in the wake of modern technical progress. With contributions from highly regarded experts who work on the frontlines of

di

Hormones, Cognition and Dementia - Eef Hogervorst 2009-09-24

A decade ago, oestrogen-containing hormone therapy was viewed as a promising strategy for the prevention and treatment of dementia and age-related cognitive decline. However, treatment trials in women with Alzheimer's disease showed that oestrogens did not reverse cognitive impairment, and clinical trials in healthy older women indicated that oestrogens did not prevent cognitive decline. The Women's Health Initiative Memory Study trial even suggested an increased risk of dementia with treatment late in life. What happened? How are we to understand these findings? What are the implications for middle-aged and older women? What about testosterone, and what about men? And where do we go from here? This book brings together world-renowned experts in basic and clinical research on sex steroids, aging, and cognition to integrate existing findings with emerging new data, and offer challenging hypotheses on these key issues.

Women's Sexual Function and Dysfunction - Irwin Goldstein
2005-11-17

The first, definitive text on female sexual dysfunction, this major new book summarizes the current body of knowledge in the field, traces the history of developments in the area, and identifies work still needed in the future. Reflecting a multidisciplinary approach to the subject, the book details the methods and materials for ensuring the appropriate management of women with sexual health problems, and concentrates on the presentation of evidence-based data concerning the physiology, pathophysiology, diagnosis and treatment of sexual function and dysfunction in women. The inclusion of 'difficult cases' also enhances the use of text as a practical guide to all disciplines concerned with the field of female sexual dysfunction. This important work will become a key resource for basic science researchers, endocrinologists, gynecologists, psychologists, urologists, health care clinicians, and anyone else interested in women's sexual health. All proceeds are donated to the International Society for the Study of Women's Sexual Health.

Testosterone - Alexandre Hohl 2023

Even though research on testosterone is increasing, there is still much controversy regarding its physiology and clinical use. This book provides a broad overview on testosterone, from its basic features to the most recent evidence of clinical applicability. In addition, specific conditions in which testosterone play a pivotal role are discussed in detail, such as hypogonadism, misuse and abuse, puberty, cardiovascular effects and testosterone therapy. The testes are vital organs for reproduction of the human species, besides being the main source of testosterone production in men. Although not essential for survival, these singular structures represent the essence of male biological function. Testosterone is the most important testicular androgen in men. Low serum testosterone levels are associated with cardiovascular morbidity, metabolic syndrome, type 2 diabetes mellitus, atherosclerosis, osteoporosis, sarcopenia, and mortality. Also, there is increasing evidence that serum testosterone is a major biomarker status of men's health in general. Hypogonadism in a male refers to a decrease in one or both of the two major functions of the testes: sperm production or testosterone production. These abnormalities can result from disease of the testes (primary hypogonadism) or disease of the pituitary or hypothalamus (secondary hypogonadism). Currently, the clinical features of male hypogonadism are sufficiently well-recognized, the causes are well-known, and the tests of the hypothalamic-pituitary-testicular axis are accurate enough for the diagnosis in most patients. Testosterone, the focus hormone of this book, is used in different forms and routes of administration. Several authors unravel its peculiarities and assist in choosing the most suitable form in each case, as well as the possible risks of its misuse or even abuse in men and women, seeking alternatives to help patients in this situation.

Annals of the New York Academy of Sciences - Thomas Lincoln
Casey 1988

Records of meetings 1808-1916 in v. 11-27.

Medical Physiology - Rodney Rhoades 2009

Now in its Third Edition, this text clearly and concisely presents the physiological principles that are essential to clinical medicine.

Outstanding pedagogical features include Active Learning Objectives

that emphasize problem-solving applications of basic principles; conceptual diagrams that help students visualize complex processes; case studies, Clinical Focus boxes, and From Bench to Bedside boxes; a comprehensive glossary; and online USMLE-style questions with answers and explanations. This edition features a new Immunology and Organ Function chapter and a completely rewritten and reorganized cardiovascular section. A companion Website will include the fully searchable text, an interactive question bank, case studies with practice questions, animations of complex processes, an image bank, and links for further study.

Steroid-protein Interactions - Roberto Frairia 1988

Effect of a Soy Dietary Supplement on Menopausal Symptoms and Hormones in Women at High Risk of Breast Cancer - 1999

The usefulness of a dietary soy supplement resulting in an intake of 45 mg/day of phytoestrogens, was tested in a randomized cross-over design

in menopausal women aged 45-58 years of age who reported a high level of menopausal hot flashes (>5/day). Women were on the soy or placebo bars for 3 months. A 22 and 26% reduction in the frequency of hot flashes was reported during both the soy and placebo supplemented phases of the study, respectively, compared to baseline, but no difference was observed in the reported number or intensity of the hot flashes when the soy and placebo phases were compared. Endogenous hormones, however, were altered with a significant decrease in serum estradiol ($p=0.003$) on the soy phase compared to baseline and compared to the placebo ($p=0.03$). Decreases in Sex-Hormone Binding Globulin were also seen ($P=0.0001$) compared to baseline and increases in Follicle-Stimulating Hormone and Leutinizing Hormone ($p=0.03$ for both). Levels of serum phytoestrogen achieved in the women while on the soy supplement were comparable and probably higher than levels seen in the Asian population. A significant inverse association was observed between levels of estrone-sulfate and the number of hot flashes reported ($p=0.02$).
