Chance in the House of Fate Jennifer Ackerman 2001 Recent discoveries in molecular biology have shown that genes governing life processes in widely different organisms from yeast to humans are essentially alike. That is the underlying theme of this book as it looks for meaning in the natural world while exploring complex questions in molecular genetics. Ackerman, a former staff writer for National Geographic and a nature author (Notes from the Shore), weaves her own personal experiences into this popular account of the natural history of heredity. (When she is pregnant with her first child, Ackerman worries that the baby will inherit the gene that caused the retardation of her younger sister.) Topics range from development and sex determination to biological clocks and cell death, and more.

New York Magazine 1997-04-28 New York magazine was born in 1968 after a run as an insert of the New York Herald Tribune and quickly made a place for itself as the trusted resource for readers across the country. With award-winning writing and photography covering everything from politics and food to theater and fashion, the magazine's consistent mission has been to reflect back to its audience the energy and excitement of the city itself, while celebrating New York as both a place and an idea.

Technologies for Rainfed Agriculture in Mediterranean Climates Peter Oram 1995-01-01 This report describes the results of a survey of 1,000 multinational corporations undertaken in 1992 which asked about the importance of environmental issues in investment decisions. The survey shows that most large corporations look systematically at environmental questions when they decide where to invest. Environmental problems appear to have discouraged a number of investments across different industries and the question of liability for past pollution problems at industrial sites was the greatest concern for investors.

Advances in Animal Biotechnology Birbal Singh 2019-07-09 This book entitled, "Advances in Animal Biotechnology," is a compilation of state-of-the-art in the field of Animal Biotechnology including fishery, that are not sheltered in depth in earlier publications. It offers an update on avant-garde technologies and advances in key aspects of genetic engineering, metagenomics, assisted reproduction, animal genomics, biotechnology in veterinary health, as well as the role of gut and marine microbial ecosystems in livestock and industrial development. The book is divided broadly into five different sections, viz., Gut Microbiome and Nutritional Biotechnology, Assisted Reproduction Biotechnology, Livestock Genomics, Health Biotechnology, and Animal Biotechnology in Global Perspective. The book covers the syllabi of Animal Biotechnology courses in various universities, academia and competitive examinations at various levels. Researchers, Continuing Graduates, and Academicians, Research Institutions, and Biotech Companies will be benefited from this valuable compilation of research. Its broad spectrum makes this work a valuable resource for professionals, researchers, academics and students in the field of veterinary and animal production as well as the biotechnology industry.

New Technologies in Animal Breeding B G Brackett 2012-12-02 New Technologies in Animal Breeding looks at new reproductive technologies in breeding domestic animals, such as sex selection, frozen storage of oocytes and embryos, in vitro fertilization and embryo culture, amphibian nuclear transplantation, parthenogenesis, identical twins and cloning in mammals, and gene transfer in mammalian cells. It summarizes the state-of-the art and offers perspectives on future directions for several animal industries of great importance in food production, including artificial insemination, embryo transfer, poultry breeding, and aquaculture. Organized into five sections encompassing 14 chapters, this book begins with an overview of animals in society and perspectives on animal breeding. It then discusses the animal industries that are heavily dependent on reproductive technology, including those engaged in cloning, selfing, aquaculture, artificial insemination, and embryo transfer. It also explains the developing technologies as well as their potential applications and impacts on animal production, along with special economic considerations, such as the benefits of reproductive management, synchronization of estrus, and artificial insemination of beef cattle and sheep. The final chapter considers biomedical and agricultural research, implementation of new technologies in animal breeding, and research in animal reproduction. This book is an

essential reference for scientists and researchers interested in animal science and animal reproduction.

Current and Future Reproductive Technologies and World Food Production G. Cliff Lamb 2013-10-29 This book addresses the impacts of current and future reproductive technologies on our world food production and provides a significant contribution to the importance of research in the area of reproductive physiology that has never been compiled before. It would provide a unique opportunity to separate the impacts of how reproductive technologies have affected different species and their contributions to food production. Lastly, no publication has been compiled that demonstrates the relationship between developments in reproductive management tools and food production that may be used as a reference for scientists in addressing future research areas. During the past 50 years assisted reproductive technologies have been developed and refined to increase the number and quality of offspring from genetically superior farm animal livestock species. Artificial insemination (AI), estrous synchronization and fixed-time AI, semen and embryo cryopreservation, multiple ovulation and embryo transfer (MOET), in vitro fertilization, sex determination of sperm or embryos, and nuclear transfer are technologies that are used to enhance the production efficiency of livestock species.

Cattle Welfare in Dairy and Beef Systems Marie Haskell 2023-11-10 This book provides a comprehensive coverage of all aspects of the welfare of cattle. It starts with a consideration of animal welfare science and its application to the management of cattle and moves through to discussions of the challenges and opportunities for providing good welfare for cattle in farming and husbandry systems across the globe. The first section comprises three chapters that discuss the social, behavioural and physiological methods that can be used to assess welfare in cattle. The second section considers the welfare challenges of beef and dairy cattle in extensive and intensive systems. The third section details welfare challenges such as at slaughter, during handling and in the growing period and details solutions such as the use of sensors and application of animal breeding techniques. The final section addresses welfare challenges and solutions in achieving sustainability, in smallholder farms in Africa and new entrant dairying in Asia and cow shelters in India. This work makes a valuable contribution to the field of animal welfare and modern livestock farming. It is a must-read for researchers and students, veterinarians as well as industry personnel and informed farmers and producers.

Coral Reef Fishes Peter F. Sale 2006-07-20 Coral Reef Fishes is the successor of *The Ecology of Fishes on Coral Reefs*. This new edition includes provocative reviews covering the major areas of reef fish ecology. Concerns about the future health of coral reefs, and recognition that reefs and their fishes are economically important components of the coastal oceans of many tropical nations, have led to enormous growth in research directed at reef fishes. This book is much more than a simple revision of the earlier volume; it is a companion that supports and extends the earlier work. The included syntheses provides readers with the current highlights in this exciting science. * An up-to-date review of key research areas in reef fish ecology, with a bibliography including hundreds of citations, most from the last decade * Authoritative and provocative chapters written to suggest future research priorities * Includes discussions of regulation of fish populations, dispersal or site fidelity of larval reef fishes, sensory and motor capabilities of reef fish larvae, and complexities of management of reef species and communities

Sexed Paul Neil Abramowitz 2021-08-02 *Sexed (Sex'd) - Hardwired by Nature -Evolving by Choice* is a first of a kind book, about the sexual hardwiring of the heterosexual male. While shining a spotlight on some of the predicaments of heterosexual male sexuality, it takes a deep archeological dive into the meeting place of sex, consciousness, biology and intimacy. In so doing it offers a granular look at the impact of our sexual hardwiring on our lived experience as men, far beyond comedy and caricature or the superficial conversations society has thus far offered us. *Sexed* - offered both as a reference for therapists and a personal study guide for the curious and evolving, and brings the reader closer to a more crystalized sense of sexual self-agency, access to intimacy and the opportunity to continue to bring the best possible version of himself to his relationship and the world. Of course women readers can benefit too by gaining insight into the development and inner workings of the heterosexual man's mind and a broader understanding as to why the hardwiring and its impact has proven to be somewhat trans historical and transcultural.

Anatomy and Physiology of Domestic Animals R. Michael Akers 2013-07-03 Anatomy and physiology are key foundational areas of study for animal science students and professionals. Understanding these guiding principles will provide students with a better understanding of complex make-up of domestic animals and continued success in further study in this field. *Anatomy and Physiology of Domestic Animals* provides a thorough, systems-based introduction to anatomy and physiology of a wide range of domestic animal species. Each chapter is highly illustrated to provide useful examples of concepts discussed.

Animal Breeding, Welfare and Society Jacky Turner 2010-08-12 The determination of when, how, how often and with whom an animal breeds is moving rapidly away from evolutionary pressures and towards human purposes: these include the breeding of around 50 billion mammals and birds for food production annually, the breeding of pedigree dogs and cats, racing dogs and horses, specialised laboratory animal strains and the use of reproductive science to conserve endangered species or breeds and to limit unwanted populations of pests and non-native species. But the ethics and sustainability of this takeover of animals' reproductive lives have been insufficiently examined by either professionals or the public. This book discusses the methods, the motivations and the consequences of human intervention in animal breeding in terms of animal health, behaviour and well-being. It explores where we are now and the choices ahead, and looks to a future where we have more respect for animals as sentient beings and where we could loosen the reins of reproductive control.
