**Problems of Cosmogony** - 1954

*Spectroscopy, Dynamics and Molecular Theory of Carbon Plasmas and Vapors* - Laszlo Nemes 2011

This book is a stop-gap contribution to the science and technology of carbon plasmas and carbon vapors. It strives to cover two strongly related fields: the molecular quantum theory of carbon plasmas and carbon nanostructures; and the molecular and atomic spectroscopy of such plasmas and vapors. These two fields of research are strongly intertwined and thus reinforce one another. Even though the use of carbon nanostructures is increasing by the day and their practical uses are emerging, there is no modern review on carbon plasmas, especially from molecular theoretical and spectroscopic viewpoints. The importance of the present book is therefore great from both educational and practical aspects. This review might be the first step towards bringing such textbooks into existence for university education. Similarly, for

applied and engineering works in carbon nanostructures, the book provides a theoretical salient point for technologists in the field.

**Quasiparticle and Phonon Excitations in Nuclei (SOLOVIEV 99)** - N Dinh Dang 2000-06-09

Professor Vadim Soloviev, an outstanding Russian nuclear theorist, was the founder of the Dubna school of nuclear structure. This volume commemorates his important contribution to nuclear physics. The subjects include: (1) traditional low-energy nuclear structure; (2) nuclear structure at extremes of excitation energy, angular momentum, isospin and mass; (3) nucleus-nucleus collisions and phase transitions in nuclear matter; (4) related subjects.

**Atmospheric Evolution on Inhabited and Lifeless Worlds** - David C. Catling 2017-04-13

A comprehensive and authoritative text on the formation and evolution of planetary atmospheres, for graduate-level students and researchers.

New Trends In Theoretical And Experimental Nuclear Physics - Proceedings Of The Predeal International Summer School - Raduta Apolodor A 1992-04-27

*Planetary Systems Now* - Luisa M Lara 2023-03-23

Planetary Systems Now offers a broad, interdisciplinary perspective and introduction to the latest results from leading experts in each field. It offers an unusually wide range of research on topics both inside and outside of the solar system, as well as the most recent results from ongoing ground- and space-based investigations. Experts in their field come together in this volume to discuss solar system exploration with its most recent space missions, theories and evidence concerning planetary system formation, and the nature and formation of exoplanets and

exoplanetary systems. Including both questions and answers, this book is intended to be a readable, heavily-illustrated stepping-off point for advanced undergraduate students, graduate students, and scientists beginning research in planetary and exoplanetary science topics.

**Zonal Jets** - Boris Galperin 2019-02-28

Presents a comprehensive, multidisciplinary volume on the physics of zonal jets, from the leading experts, for graduate students and researchers.

**Hollywood's Second Sex** - Aubrey Malone 2015-05-08

"Women stars in Hollywood were invariably in two categories," said director Otto Preminger. "One group was of women who were exploited by men, and the other, much smaller group was of women who survived by acting like men." Beginning with silent film vamp Theda Bara and continuing with icons like Greta Garbo, Marilyn Monroe and Raquel Welch, this study of film industry misogyny describes how female stars were maltreated by a sexist studio system—until women like Katharine Hepburn and Bette Davis fought for parity. The careers of Doris Day, Brigitte Bardot, Carole Landis, Frances Farmer, Dorothy Dandridge, Inger Stevens and many others are examined, along with more recent actresses like Demi Moore and Sharon Stone. Women who worked behind the scenes, writing screenplays, producing and directing without due credit, are also covered.

**Bright Hole Cosmos** - Andre Trepanier 2012-10

Text for back cover page. Bright Hole Cosmos invites you to replace the Big Bang paradigm of a unique cosmic origin and expansion by multi-bang expansions followed by contractions within a permanent cosmic recycling of all electronuclear material. The progenitors of stars and galaxies are found in expanding shells colliding with their neighbours along dynamic common walls which are home to groups of galaxies that will in turn migrate to clusters. Large clusters end up in the crushing gravitational claws of giant black holes whose final compacted destiny is a maxi-bang event, the birth of a new expanding bubble. A new method is presented to compute galactic rotation velocities from Doppler shift field data whereby Newtonian dynamics is adapted and applied to point-like corrections on a disk. The Standard Model of electronuclear particles is introduced with a questioning on the speed of gravity and the Planck units where a mare incognitum is found.

Spy - 1992-04

Smart. Funny. Fearless. "It's pretty safe to say that Spy was the most influential magazine of the 1980s. It might have remade New York's cultural landscape; it definitely changed the whole tone of magazine journalism. It was cruel, brilliant, beautifully written and perfectly designed, and feared by all. There's no magazine I know of that's so continually referenced, held up as a benchmark, and whose demise is so lamented" --Dave Eggers. "It's a piece of garbage" --Donald Trump.
