The Female Brain - Louann Brizendine 2009-05-04

Accessible, fun and compelling, and based on more than three decades of research, The Female Brain will help women to better understand themselves - and the men in their lives. In this groundbreaking book, Dr Louann Brizendine describes the uniquely flexible structure of the female

brain and its constant, dynamic state of change - the key difference that separates it from that of the male - and reveals how women think, what they value, how they communicate, and whom they'll love. She also reveals the neurological explanations behind why... - A woman remembers fights that a man insists never happened... - Thoughts about sex enter a woman's brain perhaps once every couple of days, but may enter a man's brain up to once every minute... - A woman's brain goes on high alert during pregnancy - and stays that way long after giving birth... - A woman over 50 is more likely to initiate divorce than a man... - Women tend to know what people are feeling, while men can't spot an emotion unless someone cries or threatens them with bodily harm!

The Boys' Hand Book of Masturbation - Jack Onani 2013-05-19

This "hand"y little book dispels the ugly rumors and hang-ups about one of the most pleasurable gifts "hand"ed to guys the world over. Improve self love with the chapter called "Techniques For One and All" and learn all you need to know in "A Short History of Masturbation." Dads, uncles, and single moms with adolescent boys should make this a mandatory read. Get rid of shame in their lives and let them know that those zits on their mugs came from cheeseburgers and tacos, not from downshifting the old stick shift. The Boys' Hand Book of Masturbation sets 'em straight (or gay; whatever he happens to be!)... But all joking aside, you'll be doing the youngster some good just by letting him know through the pages of this book that he is not alone. So buy this book and slip it under his door. He'll never know it came from you.

Children's needs - parenting capacity - Hedy Cleaver 2011-10-12

This second edition of "Children's needs - parenting capacity" updates the original exploration of the research literature in the light of legal and policy changes in England and findings from more recent national and international research. The edition has also been expanded to cover parental learning disabilities and how it may impact on parenting and children's health and development. The findings show that these parenting issues affect children differently depending on their age and individual circumstances. While some children grow up apparently unscathed, others exhibit emotional and behavioural disorders. This knowledge can inform practitioners undertaking assessments of the needs of children and their families and effective service responses. This publication is essential reading for practitioners, managers and policy makers concerned with improving the outcomes for children and families who are experiencing such problems.
