The Novel André Brink 1998-04-30 The postmodernist novel is renowned for the extremes of its narcissistic involvement with language, but in this book the author argues that this self-consciousness has been a characteristic of the novel since its earliest stirrings.

Sign Multilingualism Ulrike Zeshan 2019-11-18 This volume has arisen from a three-part, five-year study on language contact among multilingual sign language users, which has three strands: cross-signing, sign-switching, and sign-speaking. These phenomena are only sparsely documented so far, and thus the volume is highly innovative and presents data and analyses not previously available.

Experiential Learning in Foreign Language Education Viljo Kohonen 2014-06-11 The goal of foreign language teaching is expanding from communicative competence towards an intercultural action competence. Essential in the new orientation is the shift towards a more balanced emphasis between the external factors in the learning environment and the personal capacity, conceptions, beliefs and assumptions inside the learner's mind. As part of the changes, assessment is seen as an important means of enhancing the elearning processes, emphasising the role of reflective self-assessment. The text explores and integrates the necessary knowledge base and practices in foreign language education in terms of the basic concepts of experiential learning, intercultural learning, autobiographical knowledge and teacher development, together with the philosophical underpinnings of foreign language education.

The Limits of Performance in the French Romantic Theatre Susan McCready 2007 This volume analyzes major French plays of the 1830s, focusing on their theatricality, and on the ways in which they expose the workings of the theater rather than conceal them. Through an examination of performance within these plays, the study posits that the stage is a privileged site of demonstration, a literal "proving ground" that lends a physical reality to abstract values announced in the text and shared or questioned by the audience. Negotiating between the literary study of drama and performance theory, this work breaks new ground in nineteenth-century theater scholarship while proposing a fresh direction in the study of text and performance. The Limits of Performance challenges conventional wisdom, offering a novel take on the mal du siècle, that thematic hardy perennial of French Romanticism and the nineteenth century in general, combined with eminently readable and, therefore, compelling analysis of plays - a thought-provoking addition to work in the field (Glyn Hambrook, *Modern and Contemporary France*, November 2008).

Intermediate Conversational Sign Language Willard J. Madsen 1982 This text offers a unique approach to using American Sign Language (ASL) and English in a bilingual setting. Language, Feeling, and the Brain Daniel Shanahan 2017-09-08 Linguistic theory since the Cognitive Revolution has followed one of the premises of that revolution by largely sidelining the issue of emotions and concentrating on those aspects of language that are more strictly cognitive. However, during the last ten years research in cognitive science, especially in neuropsychology, has begun to fill in the gaps left by the exclusion of emotions from cognitive research. The work of those like Oatley, Zajonc, Damasio, and LeDoux, to name a few, has demonstrated both that it is possible to construct models of how emotions play into the workings of the psyche and that they are necessary in giving us a balanced view of the human mind. *Language, Feeling, and the Brain* attempts to apply the fruits of this new research in emotion to our understanding of language itself. Building on Karl Pribram's integrated model of emotions and motivations, the book takes an eclectic approach to explaining how emotions contribute to the nature of language, drawing on research done in neuropsychology, philosophy, cognitive linguistics, anthropology, and related fields. Its aim is to construct a propositional model for how the emotions may have contributed to the emergence of symbolic formation, most especially in the forms of gesture and speech, and how identifying that emotional influence sheds new light on everything we have had to say about language itself, from lexis and grammar to culture and literature.

Beyond the Exotic Amira El-Azhary Sonbol 2021-02-15 Most research has accepted stereotypical images of Muslim women, treating their outward manifestations, such as veiling, as passive and oppressive. Muslim women have been depicted as different, and by exoticizing (orientalizing) them—or Islamic society in general—"they" have been dealt with outside of general women's history and regarded as having little to contribute to the writing of world history or to the life of their sisters worldwide. By approaching widely used sources with different questions and methodologies, and by using new or little-used material (with much primary research), this book redresses these deficiencies. Scholars revisit and reevaluate scripture and scriptural interpretation; church records involving non-Muslim women of the Arab world; archival court records dating from the present back to the Ottoman period; and the oral and material culture and its written record, including oral history, textbooks, sufi practices, and the politics of dress. By deconstructing the past, these scholars offer fresh perspectives on women's roles and aspirations in Middle East societies.

Uttering the Word Armando Maggi 1998-01-01 Employing contemporary theoretical perspectives, *Uttering the Word* provides the first detailed analysis of the language and thought of Maria Maddalena de' Pazzi (1566-1607), an important but neglected Renaissance mystic. Borrowing from Lacan, de Certeau, and Deleuze, Maggi analyzes de' Pazzi's unique mystical discourse and studies how the Florentine visionary interprets the relationship between orality and writing, authorship and audience, sexual identity and language.

A Phonological Grammar of Kenyan Sign Language Hope E. Morgan 2022-07-05 This grammar of Kenyan Sign Language (KSL) phonology adds to a sparse literature on the units of categorical form in the world's sign languages. At the same time, it brings descriptive and theoretical research on sign language phonology into better alignment by systematically evaluating current models of sign language phonology for each of the main parameters - handshape, location, and movement - against the KSL data. This grammar also makes a methodological contribution by using a unique dataset of KSL minimal pairs in the analysis, demonstrating that minimal pairs are not as infrequent in sign languages as previously thought. The main content of the book is found in five chapters on handshape, location, core articulatory movement, manner of movement, and other distinctive features (e.g., orientation, mouth actions). The book also contains two large appendices that document the phonological evidence for each of the 44 handshapes and 37 locations. This book will be a key reference for descriptive and typological studies of sign phonology, as well as a helpful resource for linguists interested in understanding the similarities and differences between current models of sign phonology and identifying promising avenues for future research.

The New Irish Studies Paige Reynolds 2020-09-24 The New Irish Studies demonstrates how diverse critical approaches enable a richer understanding of contemporary Irish writing and culture. The early decades of the twenty-first century in Ireland and Northern Ireland have seen an astonishing rate of change, one that reflects the common understanding of the contemporary as a moment of acceleration and flux. This collection tracks how Irish writers have represented the peace and reconciliation process in Northern Ireland, the consequences of the Celtic Tiger economic boom in the Republic, the waning influence of Catholicism, the increased authority of diverse voices, and an altered relationship with Europe. The essays acknowledge the distinctiveness of contemporary Irish literature, reflecting a sense that the local can shed light on the global, even as they reach beyond the limited tropes that have long identified Irish literature. The collection suggests routes forward for Irish Studies, and unsettles presumptions about what constitutes an Irish classic.

Visual language Wendy Sandler 2019-11-04 Traditionally, research on human language has taken speech and written language as the only domains of investigation. However, there is now a wealth of empirical studies documenting visual aspects of language, ranging from rich studies of sign languages, which are self-contained visual language systems, to the field of gesture studies, which examines speech-associated gestures, facial expressions, and other bodily movements related to communicative expressions. But despite this large body of work, sign language and gestures are rarely treated together in theoretical discussions. This volume aims to remedy that by considering both types of visual language jointly in order to transcend (artificial) theoretical divides, and to arrive at a comprehensive account of the human language faculty. This collection seeks to pave the way for an inherently multimodal view of language, in which visible actions of the body play a crucial role. The 19 papers in this volume address four broad and overlapping topics: (1) the multimodal nature of language; (2) multimodal representation of meaning; (3) multimodal and multichannel prosody; and (4) acquisition and development of visual language in children and adults.

The Math Gene Keith Devlin 2001-05-17 Why is math so hard? And why, despite this difficulty, are some people so good at it? If there's some inborn capacity for mathematical thinking—which there must be, otherwise no one could do it—why can't we all do it well? Keith Devlin has answers to all these difficult questions, and in giving them shows us how mathematical ability evolved, why it's a part of language ability, and how we can make better use of this innate talent. He also offers a breathtakingly new theory of language development—that language evolved in two stages, and its main purpose was not communication—to show that the ability to

think mathematically arose out of the same symbol-manipulating ability that was so crucial to the emergence of true language. Why, then, can't we do math as well as we can speak? The answer, says Devlin, is that we can and do—we just don't recognize when we're using mathematical reasoning.

Essential Readings in Biosemiotics Donald Favareau 2010-06-10 Synthesizing the findings from a wide range of disciplines - from biology and anthropology to philosophy and linguistics - the emerging field of Biosemiotics explores the highly complex phenomenon of sign processing in living systems. Seeking to advance a naturalistic understanding of the evolution and development of sign-dependent life processes, contemporary biosemiotic theory offers important new conceptual tools for the scientific understanding of mind and meaning, for the development of artificial intelligence, and for the ongoing research into the rich diversity of non-verbal human, animal and biological communication processes. Donald Favareau's Essential Readings in Biosemiotics has been designed as a single-source overview of the major works informing this new interdisciplinary, and provides scholarly historical and analytical commentary on each of the texts presented. The first of its kind, this book constitutes a valuable resource to both bioscientists and to semioticians interested in this emerging new discipline, and can function as a primary textbook for students in biosemiotics, as well. Moreover, because of its inherently interdisciplinary nature and its focus on the 'big questions' of cognition, meaning and evolutionary biology, this volume should be of interest to anyone working in the fields of cognitive science, theoretical biology, philosophy of mind, evolutionary psychology, communication studies or the history and philosophy of science.

Sign Language Roland Pfau 2012-08-31 Sign language linguists show here that all questions relevant to the linguistic investigation of spoken languages can be asked about sign languages. Conversely, questions that sign language linguists consider - even if spoken language researchers have not asked them yet - should also be asked of spoken languages. The HSK handbook Sign Language aims to provide a concise and comprehensive overview of the state of the art in sign language linguistics. It includes 44 chapters, written by leading researchers in the field, that address issues in language typology, sign language grammar, psycholinguistics, neurolinguistics, sociolinguistics, and language documentation and transcription. Crucially, all topics are presented in a way that makes them accessible to linguists who are not familiar with sign language linguistics.
