Speech & Language Processing - Dan Jurafsky 2000-09

Symmetry #1 - Matt Hawkins 2015-12-09

Utopia is here. Hunger, sickness, work... all relics of a long forgotten

past. For the greater good of the human species, all individuality, creativity, and negative emotions have been genetically bred out and medically suppressed. The population is limited to segregated areas where people lead long lives of leisure, games, and socializing. Only one man and one woman seem to notice, care, or think differently. Once they find each other, their relationship sparks a revolution... but will their love cause the salvation or destruction of mankind?

Neurobiology of Chemical Communication - Carla Mucignat-Caretta
2014-02-14

Intraspecific communication involves the activation of chemoreceptors and subsequent activation of different central areas that coordinate the responses of the entire organism—ranging from behavioral modification to modulation of hormones release. Animals emit intraspecific chemical signals, often referred to as pheromones, to advertise their presence to members of the same species and to regulate interactions aimed at establishing and regulating social and reproductive bonds. In the last two decades, scientists have developed a greater understanding of the neural processing of these chemical signals. *Neurobiology of Chemical Communication* explores the role of the chemical senses in mediating intraspecific communication. Providing an up-to-date outline of the most recent advances in the field, it presents data from laboratory and wild species, ranging from invertebrates to vertebrates, from insects to humans. The book examines the structure, anatomy, electrophysiology, and molecular biology of pheromones. It discusses how chemical signals work on different mammalian and non-mammalian species and includes chapters on insects, *Drosophila*, honey bees, amphibians, mice, tigers, and cattle. It also explores the controversial topic of human pheromones. An essential reference for students and researchers in the field of pheromones, this is also an ideal resource for those working on behavioral phenotyping of animal models and persons interested in the biology/ecology of wild and domestic species.

This is the text where the author began to advance the ideas that would go on to take life as "performativity theory," as well as some of the first articulations of the possibility for subversive gender practices. Hypnobirthing - Siobhan Miller 2019-04-04

THIS BOOK WILL MAKE YOUR BIRTH BETTER. IT IS FOR EVERY PARENT AND EVERY TYPE OF BIRTH. Expert hypnobirthing teacher and founder of The Positive Birth Company Siobhan Miller has made it her mission to change the way we approach and experience birth. Through her teaching she seeks to educate and empower parents - and their birth partners - so that they can enjoy amazing and positive birth experiences, however they choose to bring their babies into the world. So, what is hypnobirthing? Essentially, it's a form of antenatal education, an approach to birth that is both evidence-based and logical.

Hypnobirthing certainly doesn't involve being hypnotised; instead, it teaches you how your body works on a muscular and hormonal level when in labour and how you can use various relaxation techniques to ensure you are working with your body (rather than against it), making birth more efficient and comfortable. Siobhan's advice and guidance will change your mindset and enable you to navigate your birth with practical tools that ensure you feel calm and in control throughout. By the time you finish this book you'll feel relaxed, capable and genuinely excited about giving birth.

Bearing in mind the subjective nature of sex, the book explores cultural concerns around sexualisation, pornography, and sex addiction, as well as drawing on research from sexual communities and the applied area of sex therapy. When so much of our relationship to sex happens in the mind, The Psychology of Sex shows us how important it is to understand where our ideas about sex come from.

Revoked - Allison Frankel 2020

"[The report] finds that supervision -- probation and parole -- drives high numbers of people, disproportionately those who are Black and brown, right back to jail or prison, while in large part failing to help them get needed services and resources. In states examined in the report, people are often incarcerated for violating the rules of their supervision or for low-level crimes, and receive disproportionate punishment following proceedings that fail to adequately protect their fair trial rights."-- Publisher website.
