

Sex And Behavior Status And Prospectus

Sex and Behavior - Thomas E. MacGill 1978

Hormones and Behaviour in Higher Vertebrates - J. Balthazart
2012-12-06

Fourth Conference of the European Society for Comparative Psychology and Biochemistry, Bielefeld, September 8-11, 1982

Sex and Behavior - Mcgill 1978-04-01

Discussion of the precise nature and position of boundaries between disciplines is nearly always counterproductive; the need is usually to cross them not to emphasize them. And any such discussion of the distinction between ethology and comparative psychology would today seem patently absurd. While there may be differences in outlook, no boundaries exist. But when Frank Beach started in research, that was not the case. Comparative psychology flourished in the United States whereas ethology was unknown. Beach started as a comparative psychologist and has always called himself either that or a behavioral endocrinologist. Yet, among the comparative psychologists of his generation, he has had closer links with the initially European ethologists than almost any other. He was indeed one of the editors of the first volume of *Behaviour*. That this should have been so is not surprising once one knows that his Ph. D. thesis concerned "The Neural Basis for Innate Behavior," that he used to sleep in the laboratory so that he could watch mother rats giving birth, and that in 1935 he was using model young to analyze maternal behavior. Furthermore, for nine years he worked in the American Museum of Natural History—in a department first named Experimental Biology and later, when Beach had saved it from extinction and become its chairman, the Department of Animal Behavior. It was in 1938, during Frank's time at the American Museum, that he was first introduced to Niko Tinbergen by Ernst Mayr.

Sperm Competition and the Evolution of Animal Mating systems - Robert L. Smith 2012-12-02

Sperm Competition and the Evolution of Animal Mating Systems describes the role of sperm competition in selection on a range of attributes from gamete morphology to species mating systems. This book is organized into 19 chapters and begins with the conceptualization of sperm competition as a subset of sexual selection and its implications for the insects. The following chapter describes the relationship between multiple mating and female fitness, with an emphasis on determining the conditions under which selection on females is likely to counteract selection on males for avoiding sperm competition. Other chapters consider the female perspective on sperm competition; the evolutionary causation at the level of the individual male gamete; and the correlation of high paternal investment and sperm precedence in the insects. The remaining chapters are arranged phylogenetically and explore the sperm competition in diverse animal taxa, such as the *Drosophila*, Lepidoptera, spiders, amphibians, and reptiles. These chapters also cover the evolution of direct versus indirect sperm transfer among the arachnids or the problem for kinship theory presented by multiple mating and sperm competition in the Hymenoptera. This book further discusses the remarkable potential for sperm competition among certain temperate bat species whose females store sperm through winter hibernation and the mixed strategies and male-caused female genital trauma as possible sperm competition adaptations in poeciliid fishes. The concluding chapter examines the predictions concerning testes size and mating systems in the primates and the possible role of sperm competition in human selection. This book is of great value to reproductive biologists and researchers.

Sexual Selection and the Origins of Human Mating Systems - Alan F. Dixson 2009-05-14

This book demonstrates how detailed comparative analyses of the anatomy, reproductive physiology, and behaviour of non-human primates and other mammals can offer profound insights into the origins of human sexual behaviour.

Behavioral Pharmacology of 5-HT - Paul Bevan 2013-05-13

This volume reviews the current state of research within the behavioral pharmacology of 5-HT. The book opens exciting new approaches to the interdisciplinary study of behavior and pharmacology with special reference to ethology, endocrinology, neuroanatomy and comparative aspects of drug action, and notes new developments in therapeutic drugs

of the future.

Reinventing the Sexes - Marianne van den Wijngaard 1997-04-22

"The book is accessible and well written, and the issues are thoughtfully analyzed." -- Choice An insightful examination of how traditional views of femininity and masculinity have influenced scientific research about sexual differences in the brain. The book chronicles the phallogocentric underpinnings of research in the field and the subsequent contribution of feminist intellectual thought to the modification of scientific practice.

Human Reproductive Behaviour - Laura Betzig 1988-03-31

Primate Paradigms - Linda Marie Fedigan 1992-06

This critical review of behavior patterns in nonhuman primates is an excellent study of the importance of female roles in different social groups and their significance in the evolution of human social life. "A book that properly illuminates in rich detail not only developmental and socioecological aspects of primate behavior but also how and why certain questions are asked. In addition, the book frequently focuses on insufficiently answered questions, especially those concerned with the evolution of primate sex differences. Fedigan's book is unique . . . because it places primate adaptations and our explanation of those patterns in a larger intellectual framework that is easily and appropriately connected to many lines of research in different fields (sociology, psychology, anthropology, neurobiology, endocrinology, and biology)—and not in inconsequential ways, either."—James McKenna, *American Journal of Primatology* "This is the feminist critique of theories of primate and human evolution."—John H. Cook, *Nature*

Foundations of Animal Behavior - Animal Behavior Society 1996-08

Beginning with Darwin's work in the 1870s, *Foundations of Animal Behavior* selects the most important works from the discipline's first hundred years—forty-four classic papers—and presents them in facsimile, tracing the development of the field. These papers are classics because they either founded a line of investigation, established a basic method, or provided a new approach to an important research question. The papers are divided into six sections, each introduced by prominent researchers. Sections one and two cover the origins and history of the field and the emergence of basic methods and approaches. They provide a background for sections three through six, which focus on development and learning; neural and hormonal mechanisms of behavior; sensory processes, orientation, and communication; and the evolution of behavior. This outstanding collection will serve as the basis for undergraduate and graduate seminars and as a reference for researchers in animal behavior, whether they focus on ethology, behavioral ecology, comparative psychology, or anthropology. Published in association with the Animal Behavior Society

Mammalian Sexuality - Alan F. Dixson 2021-06-03

The first detailed account of post-copulatory sexual selection and the evolution of reproduction in mammals.

Sex and Behavior - Mcgill 2013-06-29

Discussion of the precise nature and position of boundaries between disciplines is nearly always counterproductive; the need is usually to cross them not to emphasize them. And any such discussion of the distinction between ethology and comparative psychology would today seem patently absurd. While there may be differences in outlook, no boundaries exist. But when Frank Beach started in research, that was not the case. Comparative psychology flourished in the United States whereas ethology was unknown. Beach started as a comparative psychologist and has always called himself either that or a behavioral endocrinologist. Yet, among the comparative psychologists of his generation, he has had closer links with the initially European ethologists than almost any other. He was indeed one of the editors of the first volume of *Behaviour*. That this should have been so is not surprising once one knows that his Ph. D. thesis concerned "The Neural Basis for Innate Behavior," that he used to sleep in the laboratory so that he could watch mother rats giving birth, and that in 1935 he was using model young to analyze maternal behavior. Furthermore, for nine years he worked in the American Museum of Natural History—in a department first named Experimental Biology and later, when Beach had saved it from extinction and become its chairman, the Department of Animal Behavior. It was in 1938, during Frank's time at the American Museum, that he

was first introduced to Niko Tinbergen by Ernst Mayr.

Biographical History of Behavioral Neuroendocrinology - Randy J. Nelson 2022-11-29

Behavioral neuroendocrinologists are interested in the interactions between hormones and behaviors. This unique book tracks the development of behavioral neuroendocrinology from the first recognized paper in the field by Arnold Berthold in 1849 to the major contributors of the past century. It traces the history and development of the field by exploring the women and men who conducted the studies that revealed these hormone-behavioral relationships. Most chapters are written by the individuals who knew these pioneers best, and describe their stories and discuss the ways in which their work has shaped the field. Now is the perfect time for this book. The field is burgeoning and interest in the development of theoretical perspectives is thriving. Moreover, although this field was dominated by men early on, it has become a field with near sexual parity among its faculty, society membership, and leadership, and thus serves as an example of equitable science, training, and advocacy.

Biographical Memoirs - National Academy of Sciences 1998-07-01

Biographic Memoirs: Volume 73 contains the biographies of deceased members of the National Academy of Sciences and bibliographies of their published works. Each biographical essay was written by a member of the Academy familiar with the professional career of the deceased. For historical and bibliographical purposes, these volumes are worth returning to time and again.

Sex and Behavior - Thomas E. McGill 1978

Monkeys of Arashiyama, The - Linda M. Fedigan

In *The Monkeys of Arashiyama: Thirty-five Years of Research in Japan and the West*, Linda Fedigan and Pamela Asquith reveal the diversity of research on the Arashiyama Japanese macaques, and the Japanese and Western traditions in primate studies. The essays reflect studies by primatologists with the population at Arashiyama, Kyoto, and the subgroup which fissioned from the original macaque group, transferred to Texas in 1972. It is a comprehensive examination of this major research group, highlighted by some of the new and interesting findings on primate social organization.

Advances in the Study of Behavior - 1981-01-29

Advances in the Study of Behavior

[An Introduction to Animal Behaviour](#) - Aubrey Manning 1998-05-15

The new, reorganised, more user-friendly edition of a successful introductory text on animal behaviour.

Hormones and Animal Social Behavior - Elizabeth Adkins-Regan 2013-12-03

Research into the lives of animals in their natural environments has revealed a rich tapestry of complex social relationships and previously unsuspected social and mating systems. The evolution of this behavior is increasingly well understood. At the same time, laboratory scientists have made significant discoveries about how steroid and peptide hormones act on the nervous system to shape behavior. An exciting and rapidly progressing hybrid zone has developed in which these two fields are integrated, providing a fuller understanding of social behavior and the adaptive functions of hormones. This book is a guide to these fascinating connections between animal social behavior and steroid and peptide hormones--a synthesis designed to make it easier for graduate students and researchers to appreciate the excitement, engage in such integrative thinking, and understand the primary literature. Throughout, Elizabeth Adkins-Regan emphasizes concepts and principles, hypothesis testing, and critical thinking. She raises unanswered questions, providing an unparalleled source of ideas for future research. The chapter sequence is by levels of biological organization, beginning with the behavior and hormones of individuals, proceeding to social relationships and systems, and from there to development, behavioral evolution over relatively short time scales, life histories and their evolution, and finally evolution over longer time scales. The book features studies of a wide variety of wild and domestic vertebrates along with some of the most important invertebrate discoveries.

Psychology Library Editions: Comparative Psychology - Various Authors 2022-07-30

Psychology Library Editions: Comparative Psychology (16 Volume set) brings together a number of titles which explore animal behaviour and learning, some in isolation but mostly comparing it with human behaviour. Research in this area looks at many different issues, using various methods and examines species from insects to primates. The series of previously out-of-print titles, originally published between 1928 and 1997, with the majority from the 1970s and 1980s, includes contributions from many highly respected authors.
