New Islamic Urbanism - Stefan Maneval
2019-12-04

Since the dawn of the oil era, cities in Saudi Arabia have witnessed rapid growth and profound societal changes. As a response to foreign architectural solutions and the increasing popularity of Western lifestyles, a distinct style of architecture and urban planning has emerged. Characterised by an emphasis on privacy, expressed through high enclosures, gates, blinds, and tinted windows, 'New Islamic Urbanism' constitutes for some an important element of piety. For others, it enables alternative ways of life, indulgence in banned

social practices, and the formation of both publics and counterpublics. Tracing the emergence of 'New Islamic Urbanism', this book sheds light on the changing conceptions of public and private space, in the twentieth and early twenty-first centuries, in the Saudi city of Jeddah. It challenges the widespread assumption that the public sphere is exclusively male in Muslim contexts such as Saudi Arabia, where women's public visibility is limited by the veil and strict rules of gender segregation. Showing that the rigid segregation regime for which the country is known serves to constrain the movements of men and women alike, Stefan Maneval provides a nuanced account of the negotiation of public and private spaces in Saudi

Arabia.

Bi-Sexual? the Tareq Blakely Story - Linard
Freeman 2013-05-30

A young man is sent to prison after protecting his mother from a brutal attack. While in prison he is forced to transform himself into a savage in order to survive. It is during this time that he gets introduced to the term "prison gay," and is lured into a world that he had no idea existed.

From Sherds to Landscapes - Mark Altaweel
2021-05-20

This volume honors McGuire Gibson and his years of service to archaeology of Mesopotamia, Yemen, and neighboring regions. Professor Gibson spent most of his career at the University of Chicago's Near Eastern Languages and Civilizations department and the Oriental Institute. Many of his students, colleagues, and friends have contributed to this volume, reflecting Gibson's diverse interests. The volume presents new results in areas such as landscape archaeology, urbanism, the ancient languages of

Mesopotamia, history of Mesopotamia, the archaeology of Iran and Yemen, prehistory, material culture, and wider archaeological topics.

Big Breasts and Wide Hips - Yan Mo 2004

Jintong, his mother, and his eight sisters struggle to survive through the major crises of twentieth century China, which include civil war, invasion by the Japanese, the cultural revolution, and communist rule in the new China.

Probing the Depths of Evil and Good -
2007-01-01

In the few years since the attack on the World Trade Center on September 11, 2001, evil has become a central theme in the media and human consciousness: the evil of terrorism, the evil of secular culture, concern for poverty, and climate change... Yet different cultures and religious traditions have different ideas of what evil is and what its root causes are. Although there is no massive clash of cultures, many disagreements and also conflicts in the world arise from the

deep differences in views of evil. This volume explores religious views of evil. Scholars from different religions and from various parts of the world describe how people probe the depths of evil—and by necessity that of good—from their own background in various worldviews. In their explorations, almost all address the need to go beyond morality, and beyond legalistic definitions of evil and of good. They point to the radical depths of evil in the world and in human society and reinforce our intuition that there is no easy solution. But if we can gain a better understanding of what people from other worldview traditions and cultures consider evil, we are that much closer to a more peaceful world.

The Bike Path Killer - Michael Beebe
2012-03-01

"He Raped. . . Altemio Sanchez was a modern-day Jekyll and Hyde—a family man who resided in Buffalo, New York, with a wife and two sons, worked nights as a machinist, and concealed a

terrible secret. Once a year, after his shift, he'd make a side trip to a secluded spot where women would ride bikes and jog. He was called ""The Bike Path Rapist""—until he crossed the line from rape to murder. He Killed. . . For fourteen years, the Bike Path Killer mercilessly raped and murdered his prey, eluding police every step of the way. Then, the killings stopped. People wondered whether he'd left town, had been locked up in prison for another crime, or maybe even died. But when another woman's corpse with the same lethal signature surfaced, authorities knew the Bike Path Killer was back. And He Almost Got Away With It. Now, for the first time, two award-winning reporters follow a depraved killer's bloody trail of terror to the bitter end: his horrifying confession. . . Includes 16 pages of shocking photos. "

Postcolonial Migrants and Identity Politics -

Ulbe Bosma 2012

These transfers of sovereignty resulted in extensive, unforeseen movements of citizens and subjects to their former countries. The phenomenon of postcolonial migration affected not only European nations, but also the United States, Japan and post-Soviet Russia. The political and societal reactions to the unexpected and often unwelcome migrants was significant to postcolonial migrants' identity politics and how these influenced metropolitan debates about citizenship, national identity and colonial history. The contributors explore the historical background and contemporary significance of these migrations and discuss the ethnic and class composition and the patterns of integration of the migrant population.

Nutritional Bioavailability of Iron - Constance Kies 1982

Abstract: Research results concerning aspects of iron (Fe) bioavailability from various foods and interactions of Fe with other nutrients are

reported by experts for nutritionists and food and agricultural chemists. Several areas address the determination of available Fe in foods, changes in Fe availability caused by food processing, physiochemical food properties affecting Fe chemistry, and food additives that either enhance or inhibit Fe intake.

The relationship of ascorbic acid in aiding Fe absorption is discussed, as is the inhibitory action of dietary fiber. Two important human nutrition aspects cover Fe availability in human milk, and the differences in Fe utilization between vegetarians and omnivores. When careful choice is made of food combinations, food additives, and proper processing methods, humans can utilize a greater portion of the Fe in low-energy foods. (wz).

Handbook of African Medicinal Plants, Second Edition - Maurice M. Iwu 2014-02-04
With over 50,000 distinct species in sub-Saharan Africa alone, the African continent is endowed with an enormous wealth of plant resources.

While more than 25 percent of known species have been used for several centuries in traditional African medicine for the prevention and treatment of diseases, Africa remains a minor player in the global natural products market largely due to lack of practical information. This updated and expanded second edition of the Handbook of African Medicinal Plants provides a comprehensive review of more than 2,000 species of plants employed in indigenous African medicine, with full-color photographs and references from over 1,100 publications. The first part of the book contains a catalog of the plants used as ingredients for the preparation of traditional remedies, including their medicinal uses and the parts of the plant used. This is followed by a pharmacognostical profile of 170 of the major herbs, with a brief description of the diagnostic features of the leaves, flowers, and fruits and monographs with botanical names, common names, synonyms, African names, habitat and

distribution, ethnomedicinal uses, chemical constituents, and reported pharmacological activity. The second part of the book provides an introduction to African traditional medicine, outlining African cosmology and beliefs as they relate to healing and the use of herbs, health foods, and medicinal plants. This book presents scientific documentation of the correlation between the observed folk use and demonstrable biological activity, as well as the characterized constituents of the plants.

Cities Under Siege - Stephen Graham
2011-11-01

Cities are the new battleground of our increasingly urban world. From the slums of the global South to the wealthy financial centers of the West, Cities Under Siege traces the spread of political violence through the sites, spaces, infrastructure and symbols of the world's rapidly expanding metropolitan areas. Drawing on a wealth of original research, Stephen Graham shows how Western militaries and security

forces now perceive all urban terrain as a conflict zone inhabited by lurking shadow enemies. Urban inhabitants have become targets that need to be continually tracked, scanned and controlled. Graham examines the transformation of Western armies into high-tech urban counter-insurgency forces. He looks at the militarization and surveillance of international borders, the use of 'security' concerns to suppress democratic dissent, and the enacting of legislation to suspend civilian law. In doing so, he reveals how the New Military Urbanism permeates the entire fabric of urban life, from subway and transport networks hardwired with high-tech 'command and control' systems to the insidious militarization of a popular culture corrupted by the all-pervasive discourse of 'terrorism.'

A Recovery for All - Isabel Ortiz 2012

The world's financial and economic crisis has taken a toll on children and poor households. High food and commodity prices, unemployment

and austerity measures have aggravated persistent inequalities and contributed to a substantial rise in hunger and social tensions. Now, more than ever, investments for the world's poor are needed to recover lost ground in pursuit of development objectives. People everywhere are demanding change. This book describes the social impacts of the crisis, policy responses to date and United Nations alternative proposals for 'A Recovery for All.' With a foreword by Sir Richard Jolly.

Applications to Ethical Issues and Futuristic Ideas". Many of the articles within this volume deal with translational efforts taking the results of experiments on laboratory animals and applying them to humans. In many cases, these interventions are intended to help people with disabilities in such a way so as to either restore or extend brain function. Traditionally, therapies in brain augmentation have included electrical and pharmacological techniques. In contrast, some of the techniques discussed in this volume add specificity by targeting select neural populations. This approach opens the door to where and how to promote the best interventions. Along the way, results have empowered the medical profession by expanding their understanding of brain function. Articles in this volume relate novel clinical solutions for a host of neurological and psychiatric conditions such as stroke, Parkinson's disease, Huntington's disease, epilepsy, dementia, Alzheimer's disease, autism spectrum disorders

(ASD), traumatic brain injury, and disorders of consciousness. In disease, symptoms and signs denote a departure from normal function. Brain augmentation has now been used to target both the core symptoms that provide specificity in the diagnosis of a disease, as well as other constitutional symptoms that may greatly handicap the individual. The volume provides a report on the use of repetitive transcranial magnetic stimulation (rTMS) in ASD with reported improvements of core deficits (i.e., executive functions). TMS in this regard departs from the present-day trend towards symptomatic treatment that leaves unaltered the root cause of the condition. In diseases, such as schizophrenia, brain augmentation approaches hold promise to avoid lengthy pharmacological interventions that are usually riddled with side effects or those with limiting returns as in the case of Parkinson's disease. Brain stimulation can also be used to treat auditory verbal hallucination, visuospatial (hemispatial) neglect,

and pain in patients suffering from multiple sclerosis. The brain acts as a telecommunication transceiver wherein different bandwidth of frequencies (brainwave oscillations) transmit information. Their baseline levels correlate with certain behavioral states. The proper integration of brain oscillations provides for the phenomenon of binding and central coherence. Brain augmentation may foster the normalization of brain oscillations in nervous system disorders. These techniques hold the promise of being applied remotely (under the supervision of medical personnel), thus overcoming the obstacle of travel in order to obtain healthcare. At present, traditional thinking would argue the possibility of synergism among different modalities of brain augmentation as a way of increasing their overall effectiveness and improving therapeutic selectivity. Thinking outside of the box would also provide for the implementation of brain-to-brain interfaces where techniques, proper to

artificial intelligence, could allow us to surpass the limits of natural selection or enable communications between several individual brains sharing memories, or even a global brain capable of self-organization. Not all brains are created equal. Brain stimulation studies suggest large individual variability in response that may affect overall recovery/treatment, or modify desired effects of a given intervention. The subject's age, gender, hormonal levels may affect an individual's cortical excitability. In addition, this volume discusses the role of social interactions in the operations of augmenting technologies. Finally, augmenting methods could be applied to modulate consciousness, even though its neural mechanisms are poorly understood. Finally, this volume should be taken as a debate on social, moral and ethical issues on neurotechnologies. Brain enhancement may transform the individual into someone or something else. These techniques bypass the usual routes of accommodation to environmental

exigencies that exalted our personal fortitude: learning, exercising, and diet. This will allow humans to preselect desired characteristics and realize consequent rewards without having to overcome adversity through more laborious means. The concern is that humans may be playing God, and the possibility of an expanding gap in social equity where brain enhancements may be selectively available to the wealthier individuals. These issues are discussed by a number of articles in this volume. Also discussed are the relationship between the diminishment and enhancement following the application of brain-augmenting technologies, the problem of “mind control” with BMI technologies, free will the duty to use cognitive enhancers in high-responsibility professions, determining the population of people in need of brain enhancement, informed public policy, cognitive biases, and the hype caused by the development of brain- augmenting approaches.

Diagnosis and Management of

Mitochondrial Disorders - Michelangelo Mancuso 2019-05-03

This book will help readers navigate the complexity of mitochondrial disorders, by addressing the role of mitochondrial dysfunction and the complex pathophysiological mechanisms associated with a growing number of illnesses, not only of neurological interest. Further, it provides updated concepts on genotype-phenotype correlations, clinical syndromes, diagnostic algorithms and therapies. Written by the world’s foremost mitochondrial researchers, the book comprehensively presents the state-of-the-art in mitochondrial medicine, making it of interest to a wide variety of specialists, including neurologists, geneticists, internists and biologists.

The Military's Role in Counterterrorism - Geraint Hughes 2011-01-01

The author examines historical and contemporary examples of military involvement in counterterrorism, outlining the specific roles

which the armed forces of liberal democracies have performed in combating terrorism, both in a domestic and international context. He describes the political, strategic, conceptual, diplomatic, and ethical problems that can arise when a state's armed forces become engaged in counterterrorism, and argues that military power can only be employed as part of a coordinated counterterrorist strategy aimed at the containment and frustration -- rather than the physical elimination -- of the terrorist group(s) concerned.

Twelve Years A Slave, Illustrated Edition - Solomon Northup 2014-04-08

Kidnapped and sold into slavery in the American South, freeman Solomon Northup spent twelve years in bondage before being freed. *Twelve Years a Slave* is Northup's moving memoir, revealing unimaginable details of the horrors he faced as a slave on Southern plantations, and his unshakable belief that he would return home to his family. Written in the year after Northup was

freed and published in the wake of Harriet Beecher Stowe's *Uncle Tom's Cabin*, Northup's story was quickly taken up by abolitionist groups and news organizations as part of the fight against slavery, and continues to resonate more than a century after the end of the American Civil War.

Post-Colonial Immigrants and Identity Formations in the Netherlands - Ulbe Bosma 2012

In this book Ulbe Bosma explores the experience of immigrants in the Netherlands over sixty years and three generations. Looking at migrants from all countries, Bosma teases out how their ethnic identities are informed by Dutch culture, and how these immigrant identities evolve over time. "Fascinating, comprehensive, and historically grounded, this essential volume reveals how the colonial past continues to shape multicultural Dutch society. . . It is an important counterpart to work on France, Britain, and Portugal."—Andrea Smith,

Postcolonial Netherlands - Gert Oostindie

2011

"The Netherlands is home to one million citizens with roots in the former colonies Indonesia, Suriname and the Antilles. Entitlement to Dutch citizenship, pre-migration acculturation in Dutch language and culture as well as a strong rhetorical argument ('We are here because you were there') were strong assets of the first generation. This 'postcolonial bonus' indeed facilitated their integration. In the process, the initial distance to mainstream Dutch culture diminished. Postwar Dutch society went through serious transformations. Its once lily white population now includes two million non-Western migrants and the past decade witnessed heated debates about multiculturalism. The most

important debates about the postcolonial migrant communities centeracknowledgment and the inclusion of colonialism and its legacies in the national memorial culture. This resulted in state-sponsored gestures, ranging from financial compensation to monuments. The ensemble of such gestures reflect a guilt-ridden and inconsistent attempt to 'do justice' to the colonial past and to Dutch citizens with colonial roots. Postcolonial Netherlands is the first scholarly monograph to address these themes in an internationally comparative framework. Upon its publication in the Netherlands (2010) the book elicited much praise, but also serious objections to some of the author's theses, such as his prediction about the diminishing relevance of postcolonial roots"--Publisher's description.
