Different: Gender Through the Eyes of a Primatologist - Frans de Waal 2022-04-05

“Every new book by Frans de Waal is a cause for excitement, and this one is no different. A breath of fresh air in the cramped debate about the differences between men and women.

Fascinating, nuanced, and very timely.” —Rutger Bregman, author of *Humankind: A Hopeful History* In *Different*, world-renowned primatologist Frans de Waal draws on decades of observation and studies of both human and animal behavior to argue that despite the linkage between gender and biological sex, biology does not automatically support the traditional gender roles in human societies. While humans and other primates do share some behavioral differences, biology offers no justification for existing gender inequalities.

Using chimpanzees and bonobos to illustrate this point—two ape relatives that are genetically equally close to humans—de Waal challenges widely held beliefs about masculinity and femininity, and common assumptions about authority, leadership, cooperation, competition, filial bonds, and sexual behavior. Chimpanzees are male-dominated and violent, while bonobos are female-dominated and peaceful. In both species, political power needs to be distinguished from physical dominance. Power is not limited to the males, and both sexes show true leadership capacities. *Different* is a fresh and thought-provoking approach to the long-running debate about the balance between nature and nurture, and where sex and gender roles fit in. De Waal peppers his discussion with details from his own life—a Dutch childhood in a family of six boys, his marriage to a French woman with a different orientation toward gender, and decades of academic turf wars over outdated scientific theories that have proven

*Downloaded from
legacy.opendemocracy.net on
2019-07-01 by guest*

hard to dislodge from public discourse. He discusses sexual orientation, gender identity, and the limitations of the gender binary, exceptions to which are also found in other primates. With humor, clarity, and compassion, *Different* seeks to broaden the conversation about human gender dynamics by promoting an inclusive model that embraces differences, rather than negating them.

Tree of Origin - Frans B. M. de Waal
2009-07-01

How did we become the linguistic, cultured, and hugely successful apes that we are? Our closest relatives--the other mentally complex and socially skilled primates--offer tantalizing clues. In *Tree of Origin* nine of the world's top primate experts read these clues and compose the most extensive picture to date of what the behavior of monkeys and apes can tell us about our own evolution as a species. It has been nearly fifteen years since a single volume addressed the issue of human evolution from a primate perspective,

and in that time we have witnessed explosive growth in research on the subject. *Tree of Origin* gives us the latest news about bonobos, the make love not war apes who behave so dramatically unlike chimpanzees. We learn about the tool traditions and social customs that set each ape community apart. We see how DNA analysis is revolutionizing our understanding of paternity, intergroup migration, and reproductive success. And we confront intriguing discoveries about primate hunting behavior, politics, cognition, diet, and the evolution of language and intelligence that challenge claims of human uniqueness in new and subtle ways. *Tree of Origin* provides the clearest glimpse yet of the apelike ancestor who left the forest and began the long journey toward modern humanity.

Bonobo - Frans B. M. Waal 1997

the least known of the great apes. 75 color plates.

The New Chimpanzee - Craig Stanford
2018-03-12

The history of research into the lives of wild chimpanzees now spans more than a half-century since Jane Goodall began it all. The past 20 years have seen tremendous advances in our understanding of our closest kin. These include revelations about our very similar genomes, but also many new discoveries about social behavior and ecology. New cultural traditions and forms of tool use, new evidence for the causes of violence, new evidence of patterns of hunting and meat-eating, and much more. Chimpanzees are new and different apes than they were at the close of the last century. *The New Chimpanzee* synthesizes the findings of the past 20 years and offers new insights and interpretations of what researchers have learned. *The New Chimpanzee* draws from results of the 7 longest term (25-55 years) research projects from which we've

learned the most about the species, augmented by other shorter field projects conducted in recent years, including my own.--
Good Natured - Frans B. M. DE WAAL
2009-06-30

Demonic Males - Richard W. Wrangham 1996
Whatever their virtues, men are more violent than women. Why do men kill, rape, and wage war, and what can be done about it? Drawing on the latest discoveries about human evolution and about our closest living relatives, the great apes, "Demonic Males" offers some startling new answers to these questions.

The Chimpanzee and Me - Ben Garrod
2020-04-02

Ben Garrod: As seen on TV - Baby Chimps Rescue. 'Celebrities blamed for the rise in people keeping primates as pets in Britain' TIMES 2. '4,500 primates owned as pets in the UK' SKY NEWS. 'As ownership of exotic pets booms, no wonder experts are asking...

conservation or cruelty?' DAILY MAIL. The Chimpanzee & Me is a unique look at conservation of the species and Ben's life-long love of chimps, illustrated with full colour photos. For over a decade, Ben Garrod has studied chimpanzees to find ways to protect and conserve them. We join Ben on a journey that has taken him around the world, studying eastern chimps in the humid forests of Uganda and the critically endangered western chimps of Liberia. In his trademark infectious, lighthearted style, Ben describes encounters with chimpanzees that highlight the different threats they face. From the illegal international pet trade, to bushmeat markets, and the effects of relentless habitat destruction - not to mention how your new furniture, your toothpaste and even your mobile phone are all implicated in their falling numbers. In an interview with world-renowned primatologist Dr Jane Goodall, Ben shows how we can protect the chimps of the future and help conserve this endlessly

fascinating species.

Primate Psychology - Dario Maestriperi
2009-07-01

In more ways than we may sometimes care to acknowledge, the human being is just another primate--it is certainly only very rarely that researchers into cognition, emotion, personality, and behavior in our species and in other primates come together to compare notes and share insights. This book, one of the few comprehensive attempts at integrating behavioral research into human and nonhuman primates, does precisely that--and in doing so, offers a clear, in-depth look at the mutually enlightening work being done in psychology and primatology. Relying on theories of behavior derived from psychology rather than ecology or biological anthropology, the authors, internationally known experts in primatology and psychology, focus primarily on social processes in areas including aggression, conflict resolution, sexuality, attachment, parenting,

*Downloaded from
legacy.opendemocracy.net on
2019-07-01 by guest*

social development and affiliation, cognitive development, social cognition, personality, emotions, vocal and nonvocal communication, cognitive neuroscience, and psychopathology. They show nonhuman primates to be far more complex, cognitively and emotionally, than was once supposed, with provocative implications for our understanding of supposedly unique human characteristics. Arguing that both human and nonhuman primates are distinctive for their wide range of context-sensitive behaviors, their work makes a powerful case for the future integration of human and primate behavioral research.

Peacemaking Among Primates - F. B. M. de Waal 1989

Examines how simians cope with aggression, and how they make peace after fights.

The Summer Isles - Frans de Waal 2016-05-19

What separates your mind from the mind of an animal? Maybe you think it's your ability to design tools, your sense of self, or your grasp of past and future - all traits that have helped us

define ourselves as the pre-eminent species on Earth. But in recent decades, claims of human superiority have been eroded by a revolution in the study of animal cognition. Take the way octopuses use coconut shells as tools, or how elephants can classify humans by age, gender, and language. Take Ayumu, the young male chimpanzee at Kyoto University who demonstrates his species' exceptional photographic memory. Based on research on a range of animals, including crows, dolphins, parrots, sheep, wasps, bats, whales, and, of course, chimpanzees and bonobos, Frans de Waal explores the scope and depth of animal intelligence, revealing how we have grossly underestimated non-human brains. He overturns the view of animals as stimulus-response beings and opens our eyes to their complex and intricate minds. With astonishing stories of animal cognition, *Are We Smart Enough to Know How Smart Animals Are?* challenges everything you thought you knew about animal - and human

Hierarchy in the Forest - Christopher BOEHM
2009-06-30

Are humans by nature hierarchical or egalitarian? *Hierarchy in the Forest* addresses this question by examining the evolutionary origins of social and political behavior. Christopher Boehm, an anthropologist whose fieldwork has focused on the political arrangements of human and nonhuman primate groups, postulates that egalitarianism is in effect a hierarchy in which the weak combine forces to dominate the strong. The political flexibility of our species is formidable: we can be quite egalitarian, we can be quite despotic. *Hierarchy in the Forest* traces the roots of these contradictory traits in chimpanzee, bonobo, gorilla, and early human societies. Boehm looks at the loose group structures of hunter-gatherers, then at tribal segmentation, and finally at present-day governments to see how these conflicting tendencies are reflected.

Hierarchy in the Forest claims new territory for biological anthropology and evolutionary biology by extending the domain of these sciences into a crucial aspect of human political and social behavior. This book will be a key document in the study of the evolutionary basis of genuine altruism. Table of Contents: The Question of Egalitarian Society Hierarchy and Equality Putting Down Aggressors Equality and Its Causes A Wider View of Egalitarianism The Hominoid Political Spectrum Ancestral Politics The Evolution of Egalitarian Society Paleolithic Politics and Natural Selection Ambivalence and Compromise in Human Nature References Index Reviews of this book: This well-written book, geared toward an audience with background in the behavioral and evolutionary sciences but accessible to a broad readership, raises two general questions: 'What is an egalitarian society?' and 'How have these societies evolved?'...[Christopher Boehm] takes the reader on a journey from the Arctic to the Americas,

*Downloaded from
legacy.opendemocracy.net on
2019-07-01 by guest*

from Australia to Africa, in search of hunter-gatherer and tribal societies that emanate the egalitarian ethos--one that promotes generosity, altruism and sharing but forbids upstartism, aggression and egoism. Throughout this journey, Boehm tantalizes the reader with vivid anthropological accounts of ridicule, criticism, ostracism and even execution--prevalent tactics used by subordinates in egalitarian societies to level the social playing field...Hierarchy in the Forest is an interesting and thought-provoking book that is surely an important contribution to perspectives on human sociality and politics. --Ryan Earley, American Scientist Reviews of this book: Combing an exhaustive ethnographic survey of human societies from groups of hunter-gatherers to contemporary residents of the Balkans with a detailed analysis of the behavioral attributes of non-human primates (chimpanzees, gorillas, bonobos), Boehm focuses on whether humans are hierarchical or egalitarian by nature...[Boehm's hypotheses] are

invariably intriguing and well documented...He raises topics of wide interest and his book should get attention. --Publishers Weekly Boehm has been the first to look at egalitarianism with a cold, unromantic eye. He sees it as a victory over hierarchical tendencies, which are equally marked in our species. I would predict that his insightful examination will reverberate within anthropology and the social sciences as well as among biologists interested in the evolution of social systems. --Frans de Waal, Emory University Hierarchy in the Forest is an original and stimulating contribution to thinking about the origins of egalitarianism. I personally find Boehm's ideas convincing, but whether one agrees with him or not, he has formulated his hypotheses in such a way that this book is likely to set the terms of the discussion for the foreseeable future. --Barbara Smuts, University of Michigan The most unique and interesting feature of this clear, well written book is the way Boehm links the study of nonhuman primates

*Downloaded from
legacy.opendemocracy.net on
2019-07-01 by guest*

(particularly chimpanzees) to traditional concepts of political anthropology. As a political scientist, I was intrigued by Boehm's suggestion that democracy, both ancient and modern, could be understood as the expression of the same natural dispositions that support the egalitarianism of nomadic bands and sedentary tribes. I expect that many scholars in biology, anthropology, and the social sciences would learn from this stimulating book. Even those who disagree with Boehm's arguments are likely to be provoked in instructive ways. --Larry Arnhart, Northern Illinois University
Chris Boehm boldly and cogently attacks a whole orthodoxy in anthropology which sees hunter-gatherer 'egalitarianism' as somehow the basic form of human society. No praise can be too high for Boehm's brilliant and courageous book. --Robin Fox, Rutgers University

Macchiavellian Intelligence - Dario Maestriperi
2008-09-15

Judged by population size and distribution, homo

sapiens are clearly the most successful primates. A close second, however, would be rhesus macaques, who have adapted to—and thrived in—such diverse environments as mountain forests, dry grasslands, and urban sprawl. Scientists have spent countless hours studying these opportunistic monkeys, but rhesus macaques have long been overshadowed in the public eye by the great apes, who, because of their greater intelligence, are naturally assumed to have more to teach us, both about other primates and about humans as well. Dario Maestriperi thinks it is high time we shelve that misperception, and with Macchiavellian Intelligence he gives rhesus macaques their rightful turn in the spotlight. The product of more than twenty years studying these fascinating creatures, Macchiavellian Intelligence caricatures a society that is as much human as monkey, with hierarchies and power struggles that would impress Machiavelli himself. High-status macaques, for instance,

*Downloaded from
legacy.opendemocracy.net on
2019-07-01 by guest*

maintain their rank through deft uses of violence and manipulation, while altruism is almost unknown and relationships are perpetually subject to the cruel laws of the market.

Throughout this eye-opening account, Maestriperi weds his thorough knowledge of macaque behavior to his abiding fascination with human society and motivations. The result is a book unlike any other, one that draws on economics as much as evolutionary biology, politics as much as primatology. Rife with unexpected connections and peppered with fascinating anecdotes, Macchiavellian Intelligence has as much to teach us about humans as it does about macaques, presenting a wry, rational, and wholly surprising view of our humanity as seen through the monkey in the mirror.

Primates and Philosophers - Frans de Waal

2016-03-22

Can virtuous behavior be explained by nature, and not by human rational choice? "It's the

animal in us," we often hear when we've been bad. But why not when we're good? Primates and Philosophers tackles this question by exploring the biological foundations of one of humanity's most valued traits: morality. In this provocative book, renowned primatologist Frans de Waal argues that modern-day evolutionary biology takes far too dim a view of the natural world, emphasizing our "selfish" genes and reinforcing our habit of labeling ethical behavior as humane and the less civilized as animalistic. Seeking the origin of human morality not in evolution but in human culture, science insists that we are moral by choice, not by nature. Citing remarkable evidence based on his extensive research of primate behavior, de Waal attacks "Veneer Theory," which posits morality as a thin overlay on an otherwise nasty nature. He explains how we evolved from a long line of animals that care for the weak and build cooperation with reciprocal transactions.

Drawing on Darwin, recent scientific advances,

*Downloaded from
legacy.opendemocracy.net on
2019-07-01 by guest*

and his extensive research of primate behavior, de Waal demonstrates a strong continuity between human and animal behavior. He probes issues such as anthropomorphism and human responsibilities toward animals. His compelling account of how human morality evolved out of mammalian society will fascinate anyone who has ever wondered about the origins and reach of human goodness. Based on the Tanner Lectures de Waal delivered at Princeton University's Center for Human Values in 2004, *Primates and Philosophers* includes responses by the philosophers Peter Singer, Christine M. Korsgaard, and Philip Kitcher and the science writer Robert Wright. They press de Waal to clarify the differences between humans and other animals, yielding a lively debate that will fascinate all those who wonder about the origins and reach of human goodness.

Wild Chimpanzees - Adam Clark Arcadi
2018-06-21

An introduction to chimpanzee behavior and

conservation, synthesizing findings from long-term field studies in the African rainforest belt.

Guns, Germs and Steel - Jared Diamond
2013-07-04

****WINNER OF THE PULITZER PRIZE**** 'A book of big questions, and big answers' Yuval Noah Harari, bestselling author of *Sapiens* Why has human history unfolded so differently across the globe? And what can it teach us about our current crisis? Jared Diamond puts the case that geography and biogeography, not race, moulded the contrasting fates of Europeans, Asians, Native Americans, sub-Saharan Africans, and aboriginal Australians. An ambitious synthesis of history, biology, ecology and linguistics, *Guns, Germs and Steel* is a ground-breaking and humane work of popular science that can provide expert insight into our modern world. 'The most absorbing account on offer of the emergence of a world divided between have and have-nots... Never before put together so coherently, with such a combination of

expertise, charm and compassion' The Times
Gorilla Society - Alexander H. Harcourt
2008-09-15

Societies develop as a result of the interactions of individuals as they compete and cooperate with one another in the evolutionary struggle to survive and reproduce successfully. Gorilla society is arranged according to these different and sometimes conflicting evolutionary goals of the sexes. In seeking to understand why gorilla society exists as it does, Alexander H. Harcourt and Kelly J. Stewart bring together extensive data on wild gorillas, collected over decades by numerous researchers working in diverse habitats across Africa, to illustrate how the social system of gorillas has evolved and endured. Gorilla Society introduces recent theories explaining primate societies, describes gorilla life history, ecology, and social systems, and explores both sexes' evolutionary strategies of survival and reproduction. With a focus on the future, Harcourt and Stewart conclude with

suggestions for future research and conservation. An exemplary work of socioecology from two of the world's best known gorilla biologists, Gorilla Society will be a landmark study on a par with the work of George Schaller—a synthesis of existing research on these remarkable animals and the societies in which they live.

Mama's Last Hug - Frans de Waal 2019-03-14
Mama's Last Hug opens with the moving farewell between Mama, a dying chimpanzee matriarch, and her human friend, a professor who inspired the author's work. Their parting, the video of which has been watched by millions online, is not only a window into the deep bonds they shared, but into the remarkable emotional capacities of animals. In this groundbreaking and entertaining book, primatologist Frans de Waal draws on his renowned studies of the social and emotional lives of chimpanzees, bonobos and other primates, and personal encounters with many other species, to

Downloaded from
legacy.opendemocracy.net on
2019-07-01 by guest

illuminate new ideas and findings about animal emotions: joy, grief, shame, love, pain and happiness. Exploring the facial expressions of animals, human and animal politics, and animal consciousness, de Waal illustrates how profoundly we have underestimated animals' emotional experiences. He argues that emotions occupy a far more significant place in the way we organise our societies than a more rationalist approach would advocate. His radical proposal is that emotions are like organs: humans haven't a single organ that other animals don't have, and the same can be said of our emotions.

Chimpanzee Politics - Frans de Waal 2007-09-30
The first edition of Frans de Waal's Chimpanzee Politics was acclaimed not only by primatologists

for its scientific achievement but also by politicians, business leaders, and social psychologists for its remarkable insights into the most basic human needs and behaviors. Still considered a classic, this updated edition is a detailed and thoroughly engrossing account of rivalries and coalitions—actions governed by intelligence rather than instinct. As we watch the chimpanzees of Arnhem behave in ways we recognize from Machiavelli (and from the nightly news), de Waal reminds us again that the roots of politics are older than humanity.
