Cosmic Perspectives in Space Physics S. Biswas 2013-12-01 In the early years of the twentieth century, Victor Hess of Germany flew instruments in balloons and so discovered in 1912 that an extra-terrestrial radiation of unknown origin is incident on the earth with an almost constant intensity at all times. These penetrating non solar radiations which were called Cosmic Rays by Millikan, USA, opened the new frontier of space physics and many leading scientists were attracted to it. At the end of World War II a number of space vehicles, e.g. stratospheric balloons, rockets and satellites were developed. In 1950 and onwards, these vehicles enabled spectacular advances in space physics and space astrophysics. New horizons were opened in the explorations of cosmic rays, the earth's magnetosphere, the Sun and the heliosphere, the moon and the planets. Using space-borne instruments, exciting discoveries were made of stars, and galaxies in the infra-red, ultra violet, x-ray and gamma-ray wavelengths. In this text book these fascinating new findings are presented in depth and on a level suitable for senior undergraduate and graduate students, research scientists and scientists of other disciplines. Although there are several excellent books and monographs on different aspects, most of these deal with specific areas. In this text book the findings of space physics and astrophysics are presented in an integrated manner with proper introductions to the fundamental aspects, and these are supplemented by relevant ground based observations.

Astroparticle Physics and Cosmology Subhendra Mohanty 2020-10-09 Cosmology and astroparticle physics have seen an avalanche of discoveries in the past decade (IceCube - high energy neutrinos, LIGO - gravitational waves, Fermi- gamma-ray telescope, Xenon-1T - dark matter detection, PLANCK- cosmic microwave radiation, EHT picture of black hole, SDSS -galaxy surveys), all of which require a multidisciplinary background for analyzing the phenomena. The arena for testing particle physics models is in the multimessenger astronomical observations and at the same time

cosmology now requires a particle physics basis for explaining many phenomena. This book discusses the theoretical tools of particle physics and general relativity which are essential for understanding and correlating diverse astronomical observations.

Cosmic Citizens and Moonshot Thinking Rohan Roberts 2018-08-16 From award-winning educator, innovation expert, and Global Teacher Prize finalist, Rohan Roberts, comes a provocative look at why our current education system is not fit for purpose and why we need to overhaul it. *Cosmic Citizens and Moonshot Thinking: Education in an Age of Exponential Technologies* takes a fresh approach to what we need to do differently to prepare our children for a world of exponential technologies, disruptive innovations, and ubiquitous A.I. In this groundbreaking book, Roberts outlines the purpose of education in a world of increased outsourcing and automation and explains how we can future-proof our youth to survive and thrive in a world of accelerating change. Through interactions with corporate leaders, interviews with principals, meetings with parents, and surveys of students, this book considers how the best and brightest students would overhaul their education system. The book highlights the role of neuroscience in education and explores several fascinating concepts such as radical openness, abundance mindsets, the gig economy, the technological singularity, intelligent optimism, the age of imagination, humanics, transhumanism, and the importance of Enlightenment values as we advance into the 21st Century. Underpinning this book is a constant focus on the importance of bringing a sense of awe into education and fostering a sense of cosmic wonder when contemplating human purpose and human existence. Written in a style that is discursive, contemplative, and with a sense of urgency, this book will appeal to students, parents, teachers, school principals, and to anyone who recognises that the only real and long-lasting way to create a better society is to first fix our education system.

Origins of Life Douglas Whittet 2017-12-07 *Origins of Life: A Cosmic Perspective* presents an overview of the concepts, methods, and theories of astrobiology and origins of life research while presenting a summary of the latest findings. The book provides insight into the environments and processes that gave birth to life on our planet, which naturally informs our assessment of the probability that has arisen (or will arise) elsewhere. In addition, the book encourages readers to go beyond basic concepts, to explore topics in greater depth, and to engage in lively discussions. The text is intended to be suitable for mid- and upper-level undergraduates and beginning graduate students and more generally as an introduction and overview for researchers and general readers seeking to follow current developments in this interdisciplinary field. Readers are assumed to have a basic grounding in the relevant sciences, but prior specialized knowledge is not required. Each chapter concludes with a list of questions and discussion topics as well as suggestions for further reading. Some questions can be answered with reference to material in the text, but others require further reading and some have no known answers. The intention is to encourage readers to go beyond basic concepts, to explore topics in greater depth, and, in a classroom setting, to engage in lively discussions with class members.

Expanding Worldviews: Astrobiology, Big History and Cosmic Perspectives Ian Crawford 2022-06-09 This book collates papers presented at two international conferences (held at the Australian National University in 2018 and Birkbeck College London in 2019) exploring the relationships between big history and astrobiology and their wider implications for society. These two relatively new academic disciplines aim to integrate human history with the wider history of the universe and the search for life elsewhere. The book will show that, despite differences in emphasis, big history and astrobiology share much in common, especially their interdisciplinary approaches and the cosmic and evolutionary perspectives that they both engender. Specifically, the book addresses the unified, all-embracing, nature of knowledge, the impact of big history on humanity and the world at large, the possible impact of SETI on astrobiology and big history, the cultural signature of Earth's inhabitants beyond our own planet, and the political implications of a planetary worldview. The principal readership is envisaged to comprise scholars working in the fields of astrobiology, big history and space exploration interested in forging interdisciplinary links between these diverse topics, together with educators, and a wider public, interested in the societal implications of the cosmic and evolutionary perspectives engendered by research in these fields.

Starry Messenger Neil deGrasse Tyson 2022-09-20 NEW YORK TIMES BESTSELLER Bringing his cosmic perspective to civilization on Earth, Neil deGrasse Tyson shines new light on the crucial fault lines of our time—war, politics, religion, truth, beauty, gender, and race—in a way that stimulates a deeper sense of unity for us all. In a time when our political and cultural views feel more polarized than ever, Tyson provides a much-needed antidote to so much of what divides us, while making a passionate case for the twin chariots of enlightenment—a cosmic perspective and the rationality of science. After thinking deeply about how science sees the world and about Earth as a planet, the human brain has the capacity to reset and recalibrates life's priorities, shaping the actions we might take in response. No outlook on culture, society, or civilization remains untouched. With crystalline prose, *Starry Messenger* walks us through the scientific palette that sees and paints the world differently. From insights on resolving global conflict to reminders of how precious it is to be alive, Tyson reveals, with warmth and eloquence, an array of brilliant and beautiful truths that apply to us all, informed and enlightened by knowledge of our place in the universe.

A (C)osmosis Art in-between Disciplines Ioannis Michaloudis 2021-08-10 The relationship of humankind to the cosmos has a very long history, and has raised many more questions than can be adequately answered. Why has the cosmos been a source of awe and wonder since the beginning of civilizations? How are the arts of today related to our engagement with the cosmos? Who are the contemporary practitioners working in this field? This volume is the first publication on this particular theme written for a general audience, and initiates a discourse on art inspired and driven by the fact that humans are enthusiastic observers of Earth and the universe surrounding it. Furthermore, by proposing the parenthetical idea of (C)osmosis Art, the book serves to introduce a new conceptual framework intrigued and inspired by the interactions between art, science and technology.

Summary of Oliver Burkeman's Four Thousand Weeks Milkyway Media 2021-10-14 Buy now to get the main key ideas from Oliver Burkeman's

Four Thousand Weeks Four Thousand Weeks (2021) is a self-help book about using our time effectively, but not in the conventional sense. British journalist and author Oliver Burkeman argues that time management as we know it has failed horribly and we need to stop pretending otherwise. The average human life expectancy is outrageously short. If you live to be eighty, you'll have lived for about four thousand weeks. Thus, it's no surprise that ancient Greek philosophers considered the brevity of human life to be the defining problem of our existence. Unfortunately, the modern discipline of time management seems to focus solely on productivity. While productivity matters to some extent, we must remember that the world is full of wonder and we should make time to experience more of that wonder.

Mars, A Cosmic Stepping Stone Kevin Nolan 2008-08-05 **"Mars - A Cosmic Stepping Stone"** connects ordinary people with the relevance of space exploration in a way not seen since Carl Sagan. **The book encapsulates, completely and understandably, the 'big picture' about humanity's path to uncovering its cosmic connections and how Mars is critical to that. Few, if any books in the area have attempted to do this and achieve it, since those of Sagan. The book presents the broadest, most complete, most up-to-date and most exciting account of humanity's fascination with, and future intentions regarding the Red Planet. The book is built on the authors 31 years experience of astronomy and 22 years of communicating science to the public, resulting in many unique ideas and unprecedented ways of conveying them. The author is establishing a reputation in his country for this. Such an emphasis is a priority for the book - more so than conveying facts. Few currently available books approach the subject from such a stand point. A new generation, the second generation since the start of space exploration, deserve literature that encapsulates the important issues of the subject and sets them on their own path of exploration. The book connects with issues pertinent to today's world. In a global community full of stresses, this book unfolds a positive human story that is of direct relevance to everyone. In a world full of frivolous interpretations and portrayed fear regarding science, the book brings to the table a grounded yet enigmatic perspective that will bestow a sense of optimism and inclusion.**
