Bioactive Components of Human Milk -

David S. Newburg 2012-12-06

The major emphasis in this book is a compilation and definition of what is known about components of human milk, including glycoconjugates, that inhibit common pathogens of the infant. Also discussed are other bioactive constituents whose relevant biological roles are also beginning to be defined. Hormonal and

cytokine activity, immunomodulating and autoinflammatory agents, xenobiotics, and conditionally essential nutrients in milk could have roles in the protection of the infant, but may also participate in digestive processes, maternal-infant communication, maturation of the gut, central nervous system, and other components of infant growth and development. Like the protective activities, these are discussed in terms of their presence in milk, structures, potential functions, and structure/function relationship. Components whose role is nutritional support during early development of the infant are also included.

A Comparative Study to Assess the Effectiveness of Acupressure Vs Reflexology on Lactation Among Immediate Postnatal Mothers in Selected Hospitals - Arzta Sophia S 2023-04-04

God created women with an innate ability to feed her neonate with breast milk which is naturally healthy, economical, convenient and important for proper development. Breast milk is best for the neonate. Mother is the greatest gift from God to the world. Every woman should be respected and supported. Child birth creates an immense joy in the whole family. It is a joy and expectation of the entire family^{1, 2, 3} Mother is a person who can completely fulfill the needs of the new born baby in the early neonatal period by feeding her neonate with breast milk.⁴ The postpartum period involves the mother passing through many changes emotionally and physically.⁵ The word lactation is derived from a Latin word lactan which means sucking. The word which is used to refer to the action of lactating comes from the word lactate which means to produce and to supply breast milk to feed the baby. Lactation is under the control of numerous endocrine glands particularly the pituitary hormones prolactin and oxytocin.⁶ Lactation is influenced by the sucking process and by maternal emotions. Milk production is influenced by the maternal well being. Child birth and breast feeding are unique experience

in the life of each woman. Human milk is remarkable and renewable resource. It cannot be duplicated. Human milk has no substitute and the breast is the natural apparatus for feeding the baby.⁷ Breast milk is not only the best, but also must for the wellbeing of the babies. Lack of feeding especially exclusive breast feeding during the first few days of baby's life is important. W.H.O. estimates that 1.5 millions of infant's life can be saved each year through breast feeding.⁸ Breast feeding is the most important thing for every mother and baby. It is the unique experience to be cherished.

Breastfeeding and Maternal and Infant Health Outcomes in Developed Countries - U.s.

Department of Health and Human Services
2014-06-28

The purpose of this report is to summarize the literature concerning the relationship of breastfeeding and various infant and maternal health outcomes. Two key questions are addressed: 1. What are the benefits and harms for infants and children in terms of short-term outcomes, such as infectious diseases (including otitis media, diarrhea, and lower respiratory tract infections), sudden infant death syndrome (SIDS) and infant mortality, and longer term outcomes such as cognitive development, childhood cancer (including leukemia), type I and II diabetes, asthma, atopic dermatitis, cardiovascular disease (including hypertension), hyperlipidemia, and obesity, compared among those who mostly breastfeed, mostly formula feed, and mixed feed; and how are these outcomes associated with duration of the type of feeding? Do the harms and benefits differ for any specific subpopulations based on socio-demographic factors? 2. What are the benefits and harms on maternal health short-term outcomes, such as postpartum depression and return to pre-pregnancy weight, and long-term outcomes, such as breast cancer, ovarian cancer, diabetes and osteoporosis, compared among breastfeeding, formula feeding, and mixed feeding, and how are these associated with duration of the type of feeding? Do the harms and benefits differ for any specific subpopulations based on socio-demographic factors?

Great Minds in Management - Ken G. Smith
2005-09-22

In *Great Minds In Management* Ken G. Smith and Michael A. Hitt have brought together some of the most influential and original thinkers in management. Their contributions to this volume not only outline their landmark contributions to management theory, but also reflect on the process of theory development, presenting their own personal accounts of the gestation of these theories. The result is not only an ambitious and original panorama of the key ideas in management theory presented by their originators, but also a unique collection of reflections on the process of theory development, an area which to date little has been written about by those who have actually had experience of building theory. In their concluding chapter, Ken G. Smith and Michael A. Hitt draw together some common themes about the development of management theory over the last half a century, and suggest some of the conclusions to be drawn about how theory comes into being. Contributors: Chris Argyris, Albert Bandura, Jay B. Barney, Lee R. Beach, Kim Cameron, Michael R. Darby, Robert Folger, R. Edward Freeman, Michael Frese, J. Richard Hackman, Donald C. Hambrick, Michael A. Hitt, Anne S. Huff, Gary P. Latham, Edwin A. Locke, Henry Mintzberg, Terrence R. Mitchell, Richard T. Mowday, Ikujiro Nonaka, Greg R. Oldham, Jeffrey Pfeffer, Lyman W. Calcium in Human Health - Connie M. Weaver
2007-11-10

The Nutrition and Health Series of books have had great success because each volume has the consistent overriding mission of providing health professionals with texts that are essential because each includes (1) a synthesis of the state of the science; (2) timely, in-depth reviews by the leading researchers in their respective fields; (3) extensive, - to-date fully annotated reference lists; (4) a detailed index; (5) relevant tables and figures; (6) identification of paradigm shifts and the consequences; (7) virtually no

overlap of information between chapters, but targeted, interchapter referrals; (8) suggestions of areas for future research; and (9) balanced, data-driven answers to patient/health professionals' questions that are based on the totality of evidence rather than the findings of any single study. The series volumes are not the outcome of a symposium. Rather, each editor has the potential to examine a chosen area with a broad perspective, both in subject matter as well as in the choice of chapter authors. The international perspective, especially with regard to public health initiatives, is emphasized where appropriate. The editors, whose trainings are both research- and practice-oriented, have the opportunity to develop a primary objective for their book; define the scope and focus, and then invite the leading authorities from around the world to be part of their initiative. The authors are encouraged to provide an overview of the field, discuss their own research, and relate the research findings to potential human health consequences.

Safety of Silicone Breast Implants - Institute of Medicine 2000-01-06

The Dow Corning case raised serious questions about the safety of silicone breast implants and about larger issues of medical device testing and patient education. *Safety of Silicone Breast Implants* presents a well-documented, thoughtful exploration of the safety of these devices, drawing conclusions from the available research base and suggesting further questions to be answered. This book also examines the sensitive issues surrounding women's decisions about implants. In reaching conclusions, the committee reviews: The history of the silicone breast implant and the development of its chemistry. The wide variety of U.S.-made implants and their regulation by the Food and Drug Administration. Frequency and consequences of local complications from implants. The evidence for and against links between implants and autoimmune disorders, connective tissue disease, neurological problems, silicone in breast milk, or a proposed new syndrome. Evidence that implants may be associated with lower frequencies of breast cancer. *Safety of Silicone Breast Implants* provides a comprehensive, well-organized review of the science behind one of the most significant

medical controversies of our time.

Nutrition During Lactation - Institute of Medicine 1991-02-01

On the basis of a comprehensive literature review and analysis, *Nutrition During Lactation* points out specific directions for needed research in understanding the relationship between the nutrition of healthy mothers and the outcomes of lactation. Of widest interest are the committee's clear-cut recommendations for mothers and health care providers. The volume presents data on who among U.S. mothers is breastfeeding, a critical evaluation of methods for assessing the nutritional status of lactating women, and an analysis of how to relate the mother's nutrition to the volume and composition of the milk. Available data on the links between a mother's nutrition and the nutrition and growth of her infant and current information on the risk of transmission through breastfeeding of allergic diseases, environmental toxins, and certain viruses (including the HIV virus) are included. *Nutrition During Lactation* also studies the effects of maternal cigarette smoking, drug use, and alcohol consumption.

Breasts Across Motherhood: Lived Experiences and Critical Examinations - Patricia Drew 2020-03-01

Breasts are integral to mothers' bodies; over the life course, they can swell, droop, be judged, be aroused, lactate, be altered, be removed. A

woman's own breasts may be foremost in her mind during some life events, only to recede into the background at other times. Breasts are complex; they are enveloped by larger cultural meanings that go far beyond their mammary gland function, and we cannot fully understand breasts without examining the myriad discourses surrounding them. Social policies, cultural norms, and interpersonal interactions all help construct localized breast discourses which, in turn, shape mothers' breast experiences.

Through examining commonalities and differences over the lifespan, we can see that women's breast experiences inform us about the social conditions in which women live their lives.

Quicklet on Jared Diamond's Why Is Sex Fun? (CliffsNotes-like Book Summary) -

Scott James 2012-04-04

ABOUT THE BOOK Jared Diamonds Why is Sex Fun? is sexual anthropology for the layman. As he says in the quote from his preface above, hes speculating, not lecturing. He does it with wisdom, humor and a lot of insight based on research and a deep appreciation for his subject matter. He tackles topics we normally dont think about, like why only women lactate, or why we have sex when a woman isnt fertile. He writes through a combination of historical, emotional, and anthropological perspectives. His aim is to enlighten and explain, and he does it by weaving together current scientific understanding and research with his own unique brand of extrapolation. Because of his background as a scientist, he takes the tone of an academic paper, but transcends the dry delivery that

dooms most research. He stops short of pop science, a la Freakonomics or Malcolm Gladwell. Hes not just riffing possible theories from the research that others have done. Hes extending the inquiry and looking for answers to broad questions. MEET THE AUTHOR Scott James has a degree in English and has worked as a teacher, lecturer and editor for over a decade. He is a published author and poet, and freelances as a self-publishing and marketing consultant for start-ups. He lives in San Francisco with his wife. EXCERPT FROM THE BOOK In Why is Sex Fun?, Jared Diamond tackles a series of questions about human sexuality that are not easily explained by evolution. In each chapter he presents a question, explains why it is not easily answered (or not as easily answered as some scientists would have us believe), lays out several opposing points of view, and works through his reasoning As humans, we tend to think that whatever other animals do is strange, but Diamond makes it clear from the beginning that when it comes to sex, we are the strange ones. We pair up for the long-term, share parental care, live close to other couples, have sex in private, hide ovulation, and get menopause. He lays out the argument that natural selection maximizes the transmission of genes, and for humans, doing that has meant developing sexual and reproductive behaviors that diverge dramatically from our closest animal relatives. Diamond seems to suggest that the rest of the animal kingdom looks at us and wonders, why do they do that?! Diamond moves into even more contentious territory, delving into the Battle of the Sexes. Here he looks at why men and women have evolved to take on different roles in sexual reproduction and resulting child-rearing. Youll find no equal right arguments here; he makes a subtle case for gender roles having at least some basis in evolutionary necessity. The chapters in this volume bring together perspectives from Spain, Brazil, Canada, and the United States, among other countries. They include historical and contemporary examinations, and feature diverse types of writing such as first-person narrative accounts, academic interviews, and art analyses. Contributors come from an array of fields including nursing, sociology, English, art history, and psychology. Each chapter offers readers a unique context for understanding how temporally- and geographically-situated breast understandings shape mothers' personal breast views and breast-related body practices. Taken together, the chapters in this edited collection reveal the significant ways that societies shape mothers' embodied experiences and breasted selves.
