The Pocket Guide to Critical Appraisal - Iain K. Crombie 2022-06-20
This second edition of the popular guide to critical appraisal is a fully updated revision of the previous edition. Written in the same easily accessible style, The Pocket Guide to Critical Appraisal now provides annotated checklists of the most common research designs. Consistent with recent developments in evidence-based medicine, these checklists distinguish between the risk of bias in the conduct of published studies and the value of the findings for healthcare delivery. Five new chapters have been added and the original chapters have been rewritten, making the new edition a complete and concise guide for the evaluation of research quality. In addition to the checklists, the book also: describes how to quickly identify the information needed for the critical appraisal provides simple explanations of statistical significance and the interpretation of confidence intervals reviews the major sources of bias and their impact on research findings explains how to summarise the risk of bias outlines the concept of certainty of evidence and how to calculate it identifies the challenges in assessing the value of research findings
The Pocket Guide to Critical Appraisal is an essential guide for all health professions and students who read research papers and use their findings.

Connecting the System to Enhance the Practitioner and Consumer Experience in Healthcare - E. Cummings 2018-08-30

Health informatics plays a central role in the digital transformation of the healthcare sector. The integration and connection of health services, practitioners and consumers is critical to the realisation of the improvements promised by digital health, and the secondary use of health data has led to ground-breaking research discoveries. Increased reliance upon all types of digital media has also established health informatics as a viable specialisation in healthcare. This book presents the proceedings of the 26th national Health Informatics Conference (HIC 2018), Australia's premier health informatics event, held in Sydney, Australia, in July/August 2018. The conference provides an environment for clinicians, researchers, health IT professionals, industry and

consumers to integrate, educate and share the knowledge which drives innovative thinking, and this year's theme, 'Today's best practice, innovation today and preparing for tomorrow', focuses on the important issues of connecting the system, being smart with data, and enhancing the practitioner and consumer experience in healthcare interactions. The papers presented here reflect this theme, highlighting cutting-edge research evidence, technology updates and innovations from the digital transformation of the healthcare sector. Covering a wide spectrum of work, and encompassing major theoretical concepts, examples of key applications of new technologies and important new developments in the field of health informatics, the book will be of interest to all those working in the healthcare sector.

[Emergency Triage](#) - Kevin Mackway-Jones 2014-02-03

The Manchester Triage System (MTS) is the most widely used triage system in the UK, Europe and Australia, with tens of millions of patients being processed through hospital emergency departments. It is also used in hospitals throughout Brazil. Emergency Triage is the core text for the MTS, which utilises a risk averse system of prioritisation for patients in all unscheduled care settings. As such, it is an essential text for all emergency department staff using the MTS, in particular triage nurses. The book is both a training tool and a reference for daily use in the Emergency Department and prehospital settings. This edition features revised protocols that reflect new approaches to prioritisation, with accompanying revised flowcharts - the core part of the book. Table of Contents Presentation flow charts index 1: Introduction 2: The decision-making process and triage 3: The triage method 4: Pain assessment as part of the triage process 5: Patient management, triage and the triage nurse 6: Auditing the triage process 7: Telephone triage 8: Beyond prioritisation to other applications This Edition was updated in 2023 to Version 3.8.

National Clinical Coding Standards - NHS Digital 2017-04-24

This title gives specific instruction on the use of the ICD-10 classification for morbidity coding in areas of potential ambiguity to safeguard data consistency through national clinical coding standards. The National Clinical Coding Standards ICD-10 are for use with the World Health Organisation (WHO) International Statistical Classification of Diseases and Related Health Problems, Tenth Revision 5th Edition (ICD-10) when translating diagnoses and other health related problems recorded in a patient's medical record for morbidity coding. The classification of diagnoses using ICD-10 is a mandatory national requirement for the NHS Admitted Patient Care (APC) Commissioning Data Set. Where a standard within the WHO ICD-10 Volume 2 differs to a national clinical coding standard, the national clinical coding standard must take precedence.

EBOOK: Diagnosis-Related Groups in Europe: Moving towards transparency, efficiency and quality in hospitals - Reinhard Busse 2011-11-16

Diagnosis Related Group (DRG) systems were introduced in Europe to increase the transparency of services provided by hospitals and to incentivise greater efficiency in the use of resources invested in acute hospitals. In many countries, these systems were also designed to

contribute to improving - or at least protecting - the quality of care. After more than a decade of experience with using DRGs in Europe, this book considers whether the extensive use of DRGs has contributed towards achieving these objectives. Written by authors with extensive experience of these systems, this book is a product of the EuroDRG project and constitutes an important resource for health policy-makers and researchers from Europe and beyond. The book is intended to contribute to the emergence of a 'common language' that will facilitate communication between researchers and policy-makers interested in improving the functioning and resourcing of the acute hospital sector. The book includes: A clearly structured introduction to the main 'building blocks' of DRG systems An overview of key issues related to DRGs including their impact on efficiency, quality, unintended effects and technological innovation in health care 12 country chapters - Austria, England, Estonia, Finland, France, Germany, Ireland, the Netherlands, Poland, Portugal, Spain and Sweden Clearly structured and detailed information about the most important DRG system characteristics in each of these countries Useful insights for countries and regions in Europe and beyond interested in introducing, extending and/ or optimising DRG systems within the hospital sector

Cochrane Handbook for Systematic Reviews of Interventions -

Julian P. T. Higgins 2008-11-24

Healthcare providers, consumers, researchers and policy makers are inundated with unmanageable amounts of information, including evidence from healthcare research. It has become impossible for all to have the time and resources to find, appraise and interpret this evidence and incorporate it into healthcare decisions. Cochrane Reviews respond to this challenge by identifying, appraising and synthesizing research-based evidence and presenting it in a standardized format, published in The Cochrane Library (www.thecochranelibrary.com). The Cochrane Handbook for Systematic Reviews of Interventions contains methodological guidance for the preparation and maintenance of Cochrane intervention reviews. Written in a clear and accessible format, it is the essential manual for all those preparing, maintaining and reading Cochrane reviews. Many of the principles and methods described here are appropriate for systematic reviews applied to other types of research and to systematic reviews of interventions undertaken by others. It is hoped therefore that this book will be invaluable to all those who want to understand the role of systematic reviews, critically appraise published reviews or perform reviews themselves.
