Viagra was developed in the United Kingdom. In 1998, the American pharmaceutical company Pfizer Inc. launched the drug on the market. The generic name for Viagra is sildenafil and Viagra is a brand name. The drug is also known by the name of Revatio. Viagra works by slowing down the action of PDE5, an enzyme that acts on the tissues of the penis. The PDE5 enzyme breaks down a substance responsible for blood flow into the penis. Inhibition of PDE5 increases blood flow to the penis. This helps men achieve and maintain an erection. However, sildenafil can only help maintain an erection during physical stimulation. Viagra (sildenafil) relaxes the muscles of the walls of the blood vessels and increases blood flow to particular areas of the body. Viagra is used to treat erectile dysfunction (impotence) in men. Another brand of sildenafil is Revatio, which is used to treat pulmonary arterial hypertension and improve exercise capacity in men and women. With age, our body undergoes several changes and, together with

your body, your sexual stamina also undergoes many changes. You may experience low libido or erectile dysfunction. In women, one of the main changes observed is vaginal dryness. This does not mean that your sexual power has reached the end. You can have an active sex life for a lifetime. [click Buy Now.....](#)

Viagra (Sildenafil) - John Leggette 2018-08-17
 Impotency, what earlier had been called 'curse from the heaven', is not a problem these days - all thanks to Viagra. Yes, the diamond-shaped blue pill completely changed the people's perception towards sexuality, just after its invention. If you still don't know what Viagra is, then here comes the answer. With 'sildenafil' as the generic name, Viagra is a drug that is used to treat men who have problem in getting an erection sufficient to reach mutually satisfactory sexual intercourse with the partner, a state better known as male impotence or erectile dysfunction (ED). Apart from those who suffer from erectile dysfunction, Viagra is beneficial for men with high blood pressure, heart conditions, and whose blood vessels have been damaged due to diabetes and high cholesterol levels. Take a look at the following sections to grab more info on the invention of Viagra and its functioning. Many men suffer from erectile dysfunction i.e. the incapability to get and uphold an erection long enough to have a satisfying sex. There are many reasons why ED is most visible in men over 45. The sex drive is often decreased even further in older men who use medicines of various kinds. There is a misconception about sex that sex drive steadily lessens, as our age progresses ahead, so we accept ED as a natural problem. But the fact is that for many men ED may be more the result of treatable physical conditions rather than an actual loss of sex drive. In many cases, ED is the result of over burden on man's body and his brain. Specialists in this field believe that impotence affects between 10 and 15 million men in America. Impotence usually has a physical cause such as some disease, any injury or drug side effects. Any problem that harms blood flow in the penis has the power to cause impotence. Incidence rises with age. About 5 percent of men at the age of 40 and between 15 and 25 percent of men at the age of 65 experience ED. Still, it is not an inevitable part

of aging. But with the launch of viagra in 1998, things have changed.
