A Seat on the Aisle, Please! - Elizabeth Kavalier 2007-07-05

Half of all women will experience some form of debilitating pelvic disease or discomfort during their lifetime. These will include chronic urinary tract infections, various kinds of incontinence, pelvic floor prolapse, and interstitial cystitis. There has been a tendency to dismiss many symptoms of these disorders as an inevitable consequence of the aging process or, worse still, as indicators of underlying psychological disease. This concise new book suggests a new approach to urinary tract disorders is long overdue. It sympathetically explains what these diseases are and what women can do to get themselves properly diagnosed and treated.

Urolithiasis Research - H. Fleisch 2012-12-06

In recent years, a growing interest has prompted increasing numbers of research publications and scientific conferences on the subject of urolithiasis. The aims of this symposium were three: a) to review and inte

grate recent progress in major subject areas, b) to discuss current research developments and c) to stimulate interchange between investigators in Europe and in America. In a series of morning lectures, invited, recognized experts presented comprehensive reviews of major fields of urolithiasis research such as the physical chemistry of crystal formation, the metabolism of stone forming substances, and modes of therapy. A special emphasis was given to general renal physiology and the renal excretion of Ca⁺⁺, Pi, Mg, oxalate and urate. Despite its obvious importance, renal function has been relatively neglected in urolithiasis research. New research results were presented by the mechanism of after noon poster sessions. This procedure permitted informal lengthy discussions between those participants especially interested and the responsible investigator himself. In addition, informal group discussions were organized during the evenings on an ad hoc basis. In this volume, both the review lectures and brief summaries of the poster presentations have been collected. Interchange between European and American investigators was achieved by the direct participation of a large delegation from North America. This large attendance was made possible by the generous support of the National Institute for Arthritis, Metabolism and Digestive Disease U.S. N.I.H.
