LGBTQ Parents and Their Children during the Family Life Cycle - Nicola Carone 2021-03-26

Neurodevelopmental Parent-Infant Psychotherapy and Mindfulness - Maria Pozzi Monzo 2019-12-05

This innovative book explains and introduces the use of mindfulness in therapeutic work with parents and babies, covering issues such as feeding, crying, sleeping and relating, as well as other developmental challenges which affect family life, as practiced in both clinical sessions and in the home. The book is divided into two parts. Part 1 introduces: (1) what parent-infant psychotherapy is, its origin and evolution; (2) mindfulness, which consists in paying attention in a purposeful way in the present moment and not judgementally; and (3) the development and maturation of the brain and nervous system and how they are affected by the environment in utero and after birth. Part 2 then goes on to explore a range of topics such as parental mental illnesses, immigration, dislocation, loss, guilt, substance misuse, abuse, post-natal depression, congenital malformations and the role of fathers. It describes how these factors impact the parental relationship with, and the healthy development of the infant, drawing from relevant research to demonstrate the effectiveness of parent-infant psychotherapy and mindfulness. The practice of psychoanalytic psychotherapy aided by mindfulness is a useful intervention for distressed families with infants, while a mindful approach to oneself and one's baby can ease parental anxiety and free-loving capacities. Neurodevelopmental Parent-Infant Psychotherapy and Mindfulness is an essential resource for clinicians and researchers working on parent and infant relations and will also appeal to curious new or future parents.

Affect Imagery Consciousness - Silvan S. Tomkins, PhD 2008-02-15
"...brilliant..."--Malcolm Gladwell, Author of Blink "The writings for which this essay is offered as a Prologue consumed him from the mid-1950s through the end of his life in 1991. Knowing it was his lifework, Tomkins conflated life and work, reifying the superstition that its completion would equal death and refusing to release for publication long-completed material. He knew the risks associated with this obsessive, neurotic behavior, and the results were as bad as predicted. The first two volumes of *Affect Imagery Consciousness* (AIC) were released in 1962 and 1963, Volume III in 1991 shortly before he succumbed to a particularly virulent strain of small cell lymphoma, and Volume IV a year after his death. This last book contains Tomkins's understanding of neocortical cognition, ideas that are even now exciting, but until this current publication of his work as a single supervolume, almost nobody has read it. The bulk of his audience had died along with the enthusiasm generated by his ideas. Big science is now more a matter of big machines and unifocal discoveries as the basis for pars pro toto reasoning than big ideas based on the assembly and analysis of all that is known. Tomkins ignored nothing from any science past or present that might lead him toward a more certain understanding of the mind. Every idea, every theory deserved attention if only because significant observations can loiter in blind alleys."--From the Prologue by Donald L. Nathanson, MD
Volume 1 of Springer's magisterial new two-volume edition of Tomkins's magnum opus comprises *The Positive Affects* and *The Negative Affects*.
Parenting Matters - National Academies of Sciences, Engineering, and Medicine 2016-12-21

Decades of research have demonstrated that the parent-child dyad and the environment of the family "which includes all primary

caregivers are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Children of Substance-Abusing Parents - Shulamith Lala Ashenberg Straussner, PhD, CAS 2011-05-10

"Children of Substance-Abusing Parents: Dynamics and Treatment" is a necessary reference for all mental health professionals and students who need to understand and treat this population. It offers an invaluable look at treatment options and programmatic interventions across the life span and fills an important gap in the current literature. The contributors include a wide range of experts who provide up-to-date evidence-based clinical and programmatic strategies for working with children of alcohol and other substance-abusing parents of any age and in almost any practice setting. This highly recommended book is a valuable resource for all practitioners and students concerned about this very large, but often hidden group of individuals and families." From the Foreword by Sis Wenger President/CEO National Association for Children of Alcoholics Parental drug abuse and alcoholism have an enormously detrimental impact on children and adolescents. Children whose parents suffer from drug abuse or alcoholism often face multiple physical, mental, and behavioral issues. They are at a greater risk for depression, anxiety, low self esteem, and addiction, and also are known to have poor school attendance, difficulty concentrating, and lower IQ scores. This book offers health care practitioners proactive programs and innovative strategies to use with this vulnerable population. Taking a comprehensive, life course approach, the authors discuss the implications and interventions at the prenatal stage, through childhood, adolescence, young adulthood, and adulthood. With this book, social workers and health care practitioners can help assess and intervene with children of substance abusing parents. Key topics: Dynamics in families with substance abusing parents and treatment implications Issues across the life span of children of substance abusing parents Prevention and early intervention programs for pregnant women who abuse substances Programs for young children, adolescents, college students, and children with incarcerated parents

Family and HIV/AIDS - Willo Pequegnat 2011-10-22

Three decades into the HIV pandemic, the goals remain clear: reduce the number of infections, improve the health outcomes of those who are infected, and eliminate disparities in care. Recognizing their complex role as educators, mentors, and caregivers, *Family and HIV/AIDS* assembles a wealth of findings from successful prevention and intervention strategies and provides models for translating evidence into effective real-world practice. Chapters spotlight the differing roles of mothers and fathers in prevention efforts, clarify the need for family/community collaborations, and examine core issues of culture, ethnicity, gender, and diagnosis (e.g., minority families, adolescents with psychological disorders). Throughout, risk reduction and health promotion are shown as a viable public health strategy A reference with considerable utility across the health, mental health, and related disciplines, *Family and HIV/AIDS* will be a go-to resource for practitioners working with families, researchers studying at-risk populations, administrators seeking to create new (or evaluate existing) prevention and care programs, and policymakers involved in funding such programs.
