Challenging Knowledge, Sex and Power -

Julie E. Mills 2013-07-18

Women in the developed world expect to work in the labour force over the course of their lives. On finishing school more girls are entering universities and undertaking professional training for careers than ever before. Males and females enter many high status professions in roughly equal numbers. However, engineering stands out as a profession that remains obstinately male dominated. Despite efforts to change, little progress has been made in attracting and retaining women in engineering. This book analyses the outcomes of a decade-long investigation into this phenomenon, framed by two questions: Why are there so few women in engineering? And why is this so difficult to change? The study includes data from two major surveys, accounts from female engineers in a range of locations and engineering fields, and case studies of three large engineering corporations. The authors explore the history and politics of several organisations related to women in engineering, and conclude with an analysis of a range of campaigns that have been waged to address the issue of women's minority status in engineering. *Challenging Knowledge, Sex and Power* will be of great interest to students of feminist economics, and is also relevant to researchers in women's studies and engineering education.

Women in Engineering - Margaret E. Layne
2009-06-05

Women in Engineering: Pioneers and Trailblazers introduces the visionary women who opened the door for today's female engineers. Pioneers such as Emily Roebling, Kate Gleason, Edith Clarke, and Katherine Stinson come to life in this anthology of essays, articles, lectures, and reports. In this book, the significant contributions women have made to engineering, in areas as diverse as construction management,

environmental protection, and industrial efficiency, are finally placed in their proper historical context. Studies on women engineers in the 1920s and in the years following World War II, underscore how far women have progressed in engineering, and how far they have to go. With selections that span a century of historical and social analysis, *Women in Engineering: Pioneers and Trailblazers* and its companion volume, *Women in Engineering: Professional Life*, present a range of perspectives on women in engineering that will be of interest to historians, engineers, educators, and students. About the Author Margaret E. Layne, P.E., is project director of Advance VT, a program created at Virginia Tech to increase the participation and advancement of women in academic science and engineering careers.

Recruitment Strategies Aiming to Attract Females Into Undergraduate Engineering Programs - Julie Anne Howenstine 2013

By 2009, the percentage of women who graduated with general undergraduate degrees had increased to almost 58% of all students who completed 4-year degree programs (National Center for Education Statistics, 2009a). These percentages, however, have not been reflected in the enrollment rates of females into undergraduate engineering programs. In 2009, the percentage of females enrolled in undergraduate engineering degrees was only 13% (National Center for Education Statistics, 2009b). Education is a lifelong decision and individuals are becoming more psychologically involved in their college choice (Maringe & Gibbs, 2009). Recruitment activities are only one factor in the college choice decision but are an important one. Recruitment strategies to attract under-represented groups to the field of engineering had in general lacked success.

Recruitment is a way to represent and promote a

*Downloaded from
legacy.opendemocracy.net on 2019-12-30
by guest*

college or a university truthfully to those who are seeking information about it (National Association for College Admission Counseling, 2009). Recruiting consists of initiatives and materials which serve to persuade prospective students to enroll in schools and specific degree programs. Understanding the specific types of recruitment strategies created for women and the way recruitment impacts enrollment trends of women will help institutions become more effective at attracting female students into engineering programs. While research on recruitment has identified some recruitment strategies effective in attracting women to engineering, such as mentoring to prospective students (Ocif & Marshall-Goodell, 1996; Wilkins et al., 2006), marketing learning and living communities (Jaschik, 2010; Kuh et al., 2006; Stinson, 1990; Trenor, 2007; Washington Center website, 2011), as well as offering female-focused financial aid programs (Astin 1997; Cech et al., 2008) to prospective students, we still do not fully understand the whole array of recruitment strategies geared towards women. This study explored, for the first time, the array of recruitment strategies used by institutions to recruit women into undergraduate engineering degree programs. Its purpose was to map what institutions do to recruit women into undergraduate engineering programs, and shed light on why and how these institutions use the recruitment strategies they use. In addition this study aimed to analyze a potential relationship of strategies geared specifically for women with enrollment trends of female undergraduates in engineering programs. Although the study identified a host of traditional and specialized recruitment strategies geared for women, it also confirmed that many institutions have not yet initiated activities to recruit women to their engineering programs. Amongst those women-specific recruitment initiatives that the study identified, mentoring programs, female-focused financial aid, and female campus visits emerged as the prevalent ones. In addition, institutions often included female students and faculty as recruiters and role models, emphasized the need to build relationships with university representatives and the institution in general, and utilized existing programs designed for women as part of their recruitment message.

Gender, Science and Innovation - Helen Lawton Smith 2020-01-31

Gender, Science and Innovation explores the contemporary challenges facing women scientists in academia and develops effective strategies to improve gender equality. Addressing an important gap in current knowledge, chapters offer a range of international perspectives from diverse contexts, countries and institutional settings. This book is an essential contribution to the literature for academics, researchers and policy makers concerned with improving gender equality in academia and seeking to learn from the experiences of others.

Finders Keepers - Joydeep Hor 2008

How do you find and keep talented staff? In the face of a growing skills shortage, this is one of the biggest issues facing business and HR managers today. In *Finders Keepers: How To Attract and Retain Great Employees*, ten Australian businesses tell us the secrets of their success. *Finders Keepers*, based on genuine Australian case studies, provides practical and legal tips on how to be a great 'finder' and 'keeper' of employees in a tight employment market. Learn from companies such as St George Bank, Sensis, Roche Products, KPMG and Integral Energy.

Handbook of Research on Recent Developments in Materials Science and Corrosion Engineering Education - Lim, Hwee Ling 2015-02-28

The latest research innovations and enhanced technologies have altered the discipline of materials science and engineering. As a direct result of these developments, new trends in Materials Science and Engineering (MSE) pedagogy have emerged that require attention. The *Handbook of Research on Recent Developments in Materials Science and Corrosion Engineering Education* brings together innovative and current advances in the curriculum design and course content of MSE education programs. Focusing on the application of instructional strategies, pedagogical frameworks, and career preparation techniques, this book is an essential reference source for academicians, engineering practitioners, researchers, and industry professionals interested in emerging and future trends in MSE

training and education.

Careers for Women in Science and Technology - United States. Congress. House. Committee on Science, Space, and Technology. Subcommittee on Energy 1994

Moving Students of Color from Consumers to Producers of Technology - Rankin, Yolanda 2016-12-12

In recent years, diversity in learning environments has become a pivotal topic of conversation for educators. By enhancing underrepresented students' computational thinking skills, it creates more room for future career opportunities. *Moving Students of Color from Consumers to Producers of Technology* is a comprehensive reference source that provides innovative perspectives on the need for diversity in computer science and engineering disciplines and examines best practices to build upon students' knowledge bases. Featuring coverage on an expansive number of topics and perspectives, such as, computational algorithmic thinking, STEM diversity, and distributed mentorship, this publication is ideally designed for academicians, researchers, and students interested in efforts to broaden participation in computer science careers fields for underrepresented students.

Engineers of Jihad - Diego Gambetta 2017-11-28

A groundbreaking investigation into why so many Islamic radicals are engineers. The violent actions of a few extremists can alter the course of history, yet there persists a yawning gap between the potential impact of these individuals and what we understand about them. In *Engineers of Jihad*, Diego Gambetta and Steffen Hertog uncover two unexpected facts, which they imaginatively leverage to narrow that gap: they find that a disproportionate share of Islamist radicals come from an engineering background, and that Islamist and right-wing extremism have more in common than either does with left-wing extremism, in which engineers are absent while social scientists and humanities students are prominent. Searching for an explanation, they tackle four general questions about extremism: Under which socioeconomic conditions do people join extremist groups? Does the profile of extremists reflect how they self-select into extremism or

how groups recruit them? Does ideology matter in sorting who joins which group? Lastly, is there a mindset susceptible to certain types of extremism? Using rigorous methods and several new datasets, they explain the link between educational discipline and type of radicalism by looking at two key factors: the social mobility (or lack thereof) for engineers in the Muslim world, and a particular mindset seeking order and hierarchy that is found more frequently among engineers. Engineers' presence in some extremist groups and not others, the authors argue, is a proxy for individual traits that may account for the much larger question of selective recruitment to radical activism. Opening up markedly new perspectives on the motivations of political violence, *Engineers of Jihad* yields unexpected answers about the nature and emergence of extremism.

Workforce Development - Roger Harris 2013-11-19

This book captures the essence of current workforce development perspectives and draws on extensive global research to uncover a range of issues confronting organisations. Taking primarily an Australian outlook after the global financial crisis and tracing the progress of a national industry sector, each chapter delves into a major area of interest for leaders. Overall, the authors make the case that workforce development is an amalgam of activities influenced by context, politics and economic development. As the world becomes increasingly connected and mobile, workforce development is proving to be a major activity for organisations because it impacts their longer-term survival and growth. To stay ahead, successful organisations focus on attracting, building, engaging and retaining talented people. However, in a financially turbulent era where strategy changes quickly, workforce development must not only plan and build the capabilities of people at work, but also contribute to making employment more socially sustainable for a better world. This book provides a thought-provoking collection of scholarly work for business leaders, human resource practitioners and academics working in adult education, business, psychology and social science disciplines. At the same time, it adopts an accessible style for students and others who

want to know more about the development of people at work.

Introduction of a Centralized College Recruitment Program to Attract More Female Engineers - R. B. Kennedy 1985

In an effort to alleviate large numbers of engineering vacancies and to provide a systematic input of new engineers, a centralized college recruitment program was initiated at the U.S. Army Missile Command at the beginning of Fiscal Year (FY) 1982. Review of traditional government recruitment procedures and increased demand for research personnel leading to the establishment of the centralized college recruitment program and equal employment opportunity for females are discussed. Recruitment results are compared for the first 3 years of the recruitment program and the 3 years immediately prior to its establishment. The comparison indicates the increased number of female engineers recruited during the 3 years of the centralized program was significant. For purposes of this study, significant increase was defined as doubling the number of female engineers recruited. A discussion of the possibility that the results may have been confounded by factors other than the recruitment intervention is provided. (Author).

Automation, Communication and Cybernetics in Science and Engineering 2013/2014 - Sabina Jeschke 2014-12-03

This book continues the tradition of its predecessors "Automation, Communication and Cybernetics in Science and Engineering 2009/2010 and 2011/2012" and includes a representative selection of scientific publications from researchers at the institute cluster IMA/ZLW & IfU. IMA - Institute of Information Management in Mechanical Engineering ZLW - Center for Learning and Knowledge Management IfU - Associated Institute for Management Cybernetics e.V. Faculty of Mechanical Engineering, RWTH Aachen University The book presents a range of innovative fields of application, including: cognitive systems, cyber-physical production systems, robotics, automation technology, machine learning, natural language processing, data mining, predictive data analytics, visual analytics, innovation and diversity management, demographic models, virtual and remote

laboratories, virtual and augmented realities, multimedia learning environments, organizational development and management cybernetics. The contributions selected reflect the fundamental paradigm shift toward an increasingly interdisciplinary research world - which has always been both the basis and spirit of the institute cluster IMA/ZLW & IfU.

GIEE 2011: Gender and Interdisciplinary Education for Engineers - André Béraud 2012-12-30

Attracting more young people, particularly women, in Engineering and Technology (ET) is a major concern in Europe today. Their participation in engineering occupations appears to be a key-issue for European economic and technical development, as well as a central achievement towards gender equality and social justice. Increasing young people's interest in the sciences and mathematics and underlining the importance of Engineering and Technology developments in shaping our collective future is an ongoing project in the education sector. This book presents various analyses and ideas for possible solutions. Aujourd'hui, attirer plus de jeunes et en particulier des jeunes femmes dans les formations d'ingénieurs est un souci majeur en Europe. C'est une clé pour aller vers l'égalité des sexes et favoriser le développement économique, scientifique et technologique de l'Europe. Accroître l'intérêt des jeunes pour les sciences et la technologie est essentiel pour notre futur collectif et constitue un défi majeur pour l'éducation. Ce livre présente des analyses et des idées pour de possibles solutions.

Re-engineering Engineering Education in Europe - Claudio Borri 2007

Contributing to the development and the enrichment of the European dimension in Engineering Education (EE), constituted the global goal of TREE. In other words to enhance the compatibility of the many diverse routes to the status of Professional Engineer which exist in Europe and, hence, to facilitate greater mobility of skilled personnel and integration of the various situations throughout Europe. The activity of the TN TREE, made up by some 110 higher education Institutions and Associations, has been developed along four main lines: A. the tuning line B. the education and research line C. the attractiveness of EE line D. the sustainability

line This volume, accompanied by a CD Rom, presents the results of three years of works in the frame of the Thematic Network TREE which was activated and financed in the frame of the SOCRATES Programme in the period 2004-2007. *US Black Engineer & IT* - 1997-10

Women and Engineering in Nigeria - A. J. Badekale 2003

Teaching and Learning in a Digital World -

Michael E. Auer 2018-02-09

This book gathers the Proceedings of the 20th International Conference on Interactive Collaborative Learning (ICL2017), held in Budapest, Hungary on 27-29 September 2017. The authors are currently witnessing a significant transformation in the development of education. The impact of globalisation on all areas of human life, the exponential acceleration of technological developments and global markets, and the need for flexibility and agility are essential and challenging elements of this process that have to be tackled in general, but especially in engineering education. To face these current real-world challenges, higher education has to find innovative ways to quickly respond to them. Since its inception in 1998, this conference has been devoted to new approaches

in learning with a focus on collaborative learning. Today the ICL conferences offer a forum for exchange concerning relevant trends and research results, and for sharing practical experience gained while developing and testing elements of new technologies and pedagogies in the learning context.

Managing Human Resources in Cross-border Alliances - Randall S. Schuler 2004

Considers the growing importance of cross-border alliances, in particular international joint ventures, mergers and acquisitions. Featuring case-studies and other added value features, this is an essential text for students of HRM.

Female-friendly Science - Sue Vilhauer Rosser 1990

The purpose of this book is to explore the potential of feminist pedagogical methods and theories of women's studies to attract women and people of color to science

Improving Women's Access to Higher Education - Halil Dundar 1993

Projects to increase female participation in higher education are most likely to succeed where there is a strong demand for educated women in the labor market, combined with a high private demand for higher education by women (and their parents).
