

Sexual Matrix Boy Meets Girl On The Evol

Factsheet Five - 1990

Multivariate Statistical Analysis - Sam Kash Kachigan 1991

This classic book provides the much needed conceptual explanations of advanced computer-based multivariate data analysis techniques: correlation and regression analysis, factor analysis, discrimination analysis, cluster analysis, multi-dimensional scaling, perceptual mapping, and more. It closes the gap between spiraling technology and its intelligent application, fulfilling the potential of both.

[Censoring Sex Research](#) - Thomas K Hubbard 2016-06-16

This volume sheds light on one of the most explosive episodes of censure of academic scholarship in recent decades. Bruce Rind, a former psychology professor at Temple University, investigated sexual relations between male adults and adolescents through history and across cultures, from highly institutionalized relationships in Ancient Greece and Rome, to 33 contemporary cultures including the USA, and among various species. His conclusions that these relations, when consensual, are not always negative was radical, but based in his research findings. Even before publication of an invited article on the topic, he was subjected to intensive attacks, censured, and censored. This book presents a substantially extended version of Rind's original, unpublished article, plus 12 scholarly responses to his work that argue for or against Rind's conclusions or offer useful context on his work. For anyone interested in sex research and the academic freedom issues surrounding it, whether supportive of or vehemently opposed to Rind's ideas, this book is a must-read.

The Mark of the Beast - Mark S. Roberts 2008
The Mark of the Beast historically and critically examines the dire effects of the process of animalization on both humans and animals. Roberts provides a general account of the theoretical division between humans and

animals begun largely in the work of Aristotle and continued in that of Descartes and Kant. Following the philosophical provenance of the idea of animality, Roberts explores the practical and "scientific" uses of this idea, focusing largely on what Stephen J. Gould terms the "biodeterministic tradition" by evaluating the primarily nineteenth century theories of atavism, craniology, recapitulation, and so on, while also exploring the use of medical and psychological techniques of animalization.

The New York Times Book Review - 1994-04
Presents extended reviews of noteworthy books, short reviews, essays and articles on topics and trends in publishing, literature, culture and the arts. Includes lists of best sellers (hardcover and paperback).

Statistical Analysis - Sam Kash Kachigan 1986
This classic book provides the much needed conceptual explanations of advanced computer-based multivariate data analysis techniques: correlation and regression analysis, factor analysis, discrimination analysis, cluster analysis, multi-dimensional scaling, perceptual mapping, and more. It closes the gap between spiraling technology and its intelligent application, fulfilling the potential of both.

Understanding Sexuality - Kurt Haas 1993

The Civilization of Illiteracy - Mihai Nadin 1997

Phenomena related to the transition from a literacy-dominated civilization to one of various means of expression and communication are at the center of his book. The fall of totalitarian regimes, the current structural difficulties of the European Community, the burden of state bureaucracies, the world-wide effort of re-engineering, and the global economy are part of the bigger picture of a necessary development.

[The Sexual Matrix](#) - Sam Kash Kachigan 1990

Theories of Human Development - Michael G. Green 2015-07-14

The authors have grouped the theories into three classical "families" which differ in their views relative to the prime motives underlying human nature. They show how theories are specific examples of more general points of view called paradigms. The theories chosen to represent the three paradigms (the Endogenous Paradigm, Exogenous Paradigm, and the Constructivist Paradigm) were selected because they met four criteria: importance, as judged by academic and research psychologists fertility, as judged by the amount of research the theory has generated scope, as judged by the variety of phenomena the various theories explain family resemblance, as judged by how well each theory represents its paradigm The authors present the "paradigm case" in the lead chapter for each paradigm. This paradigm case is the "best example" for the paradigm. The authors explain why paradigm cases are important, and give them more detailed treatment than other theories in the same paradigm.

Evolution Science and Ethics in the Third Millennium - Robert Cliquet 2018-01-10

The book aims to revitalise the interdisciplinary debate about evolutionary ethics and substantiate the idea that evolution science can provide a rational and robust framework for understanding morality. It also traces pathways for knowledge-based choices to be made about directions for future long-term biological evolution and cultural development in view of adaptation to the expected, probable and possible future and the ecological sustainability of our planetary environment The authors discuss ethical challenges associated with the major biosocial sources of human variation: individual variation, inter-personal variation, inter-group variation, and inter-generational variation. This book approaches the long-term challenges of the human species in a holistic way. Researchers will find an extensive discussion of the key theoretical scientific aspects of the relationship between evolution and morality. Policy makers will find information that can help them better understand from where we are coming and inspire them to make choices and take actions in a longer-term perspective. The general public will find food for thoughts.
