A Harvest of Memories Dick Jeffers 2006 Chapter 1. The Boss Man. Introduces my father and mother. If it wasn't for them I wouldn't have been around to write these stories! Chapter 2. Growing up a Protestant. Is mostly about growing up as a small boy in a Protestant culture in Ireland. Chapter 3. The Hungry Thirties: A brief explanation of the Hungry Thirties abroad and at home, also explains why the shortage of money in olden times didn't prevent people from living and enjoying themselves in spite of its absence! Chapter 4. Hitler's War. How it benefited Ireland. Emigrant's money being sent home, and the opportunity to work, which was unavailable at home. Chapter 5. War and Horses: During the war years horses of all kinds were in big demand and gave my Father the opportunity to show his mettle. Chapter 6. Dismal Fifties: We break away from Thirties thinking, but progress is slow! Chapter 7. The EEC. Entry to Europe and consequent benefits. Chapter 8: The Fordson Tractor: Irelands first approach to mechanisation, and how it was adopted wholeheartedly by the farm worker. Chapter 9. The Ferguson TE 20: This tractor was the turning point in mechanised farming, but it took a while to sell itself to 'Doubtful Thomas's' in the farming fraternity. Chapter 10. The Reaper and Binder: The half way stage between backbreaking work in the harvest field, and today's modern combine harvester. Chapter 11. Thrashing: Sweat, dust, and rat killing, and the hazards faced on road and in haggard when moving from farm to farm. Chapter 12: The Agricultural Contractor: Very much in vogue today, but was always there in bygone times as additional farm income. Chapter 13. Neighbours: How to, and how not to, get along with them, and their real worth in times of trouble or need. Chapter 14. A Settin' of Eggs: A settin' of eggs relates how important the money earned from selling eggs was to the farmer's wife, and how it doesn't pay to get too greedy. Chapter 15: Pin Money: Many of today's women, married or single, are financially independent and what they earn could hardly be described as 'pin money'. Yesterday's rural woman struggled hard for her independence, be it selling eggs, butter, the odd calf or piglet, or thinning roots for farmers and cutting sheaves at thrashing time. Bord Failte and the B@B's set her up and gave some the chance to earn real money. Chapter 16: Daisy the House Cow: Queen of the farmyard, her welfare was important not only to the farmer and his family but various other farm animals. Her yearly journey to a suitor is recorded Chapter 17: Sheep: A law unto themselves, and the bane of all owners when any form of control is practiced. The buying and selling of them is an art form. Chapter 18: Fairs Old and New: The period covered is from the old hand spittin' an' clappin' fair green days, to the modern Livestock auction ring. The Dealin' Man was PR personified! Chapter 19. Training of the Collie Pup: The Collie Pup and how he should not be trained. Chapter 20. The Rescue of Kelpie: A favourite sheepdog who was lost and was rescued. Chapter 21. The Farm Labourer: His trials and tribulations. Low wages and long hours usually carried with a cheerful disposition. Chapter 22. The Farm Labourers Wife: The same trials only female. The options of the single girl were limited. The best was made of a bad lot. Chapter 23. The County Show: All the hoopla of preparation, then disappointment when honour is called into question. Chapter 24. The Gunner Ryan: A dacent man not over fond of work, but needs must when the Devil drives. Prayers to our Lady are of little help. Chapter 25. The Campaign: Harvesting sugar beet, the exact opposite of gr

The Trying Game Amy Klein 2020-04-07 From the author of "Fertility Diary" for the New York Times Motherlode blog comes a reassuring, no-nonsense guide to both the emotional and practical process of trying to get pregnant, written with the smarts, warmth, and honesty of a woman who has been in the trenches. "A compassionate, often funny, well-researched, and ultimately empowering guide."—Lori Gottlieb, New York Times bestselling author of *Maybe You Should Talk to Someone* There are so many ways to be Not Pregnant: You can be young, old, partnered, or unpartnered. Maybe you have endometriosis. Maybe you don't have enough eggs or your partner doesn't have enough sperm. Or maybe there's nothing wrong except you're Just. Not. Pregnant. Amy Klein has been there. Faced with fertility obstacles, she quickly became an expert. After nine rounds of IVF, four miscarriages, three acupuncturists, two rabbis, and one reproductive immunologist, she finally became a mother. And she wrote about it all for the New York Times Motherlode blog in her "Fertility Diary" column. Now, Amy has written the book she wishes she'd had when she was trying to get pregnant. With advice from medical experts as well as real women, she outlines your options every step of the way, from questions you should ask to advice on getting your mother-in-law to mind her own beeswax. In this comprehensive road map to infertility, you'll find topics such as: • whether to freeze your eggs • finding (and affording) a clinic • what to expect during your first IVF cycle • baby envy—aka it's okay to skip your friend's shower • whether the alternative route—acupuncture, herbs, supplements—is for you • helpful tips, charts, and more! Empowering, compassionate, and down-to-earth, *The Trying Game* will show you what to expect when you're not expecting with heart and humanity when you need it the most.

Poultry for Profit and Pleasure Robyn G. Alders 2004 This publication is part of a series which seeks to raise awareness amongst policymakers and agricultural support services in low and middle income countries about sustainable income generation opportunities for small-scale farmers and local communities. It contains guidance on the keeping of poultry, and topics discussed include: the history of domestic poultry production, its contribution to sustainable rural livelihoods, key components of rural poultry production, diversification and intensification issues, utilisation of poultry products. It includes examples of case studies of poultry production schemes in Bangladesh, South Africa, Guatemala, Cambodia and the Philippines.

I'm Taking My Eggs and Going Home Lisa Manterfield 2010-11-20 Lisa Manterfield was a sensible 32-year-old when she met The One—a man who sparked a passion for tango, an urge to break down closed doors, and a deep-rooted desire to reproduce. Five years later she was a baby addict, hiding her addiction, plotting a maternity ward heist, and threatening anything that got in her way, including her beloved husband and his pesky practicality. In this gritty, award-winning memoir, Manterfield traces her spiraling route from rational 21st-century woman to desperate mama-wannabe. She examines the siren song of motherhood, the insidious lure of the fertility industry, and the repercussions of being childless in a mom-centric society. But this isn't just another infertility story with another miracle baby ending, nor is it a sad introspective of a childless woman; this is a story about love, desire, and choices—and ultimately about hope. It is the story of a woman who escapes her addiction, not with a baby, but with her sanity, her marriage, and her sense-of-self intact. 2012 Independent Publishers Book Awards winner.

The Male Biological Clock Harry Fisch 2013-09-24 Say "biological clock" and most people think "women." Yet men have biological clocks too, reveals Dr. Harry Fisch, one of the country's leading experts in male infertility and author of this groundbreaking new book, *The Male Biological Clock*. Men's clocks tick at a different rate from women's and of course cause an entirely different set of bodily and behavioral changes over the course of a lifetime. But while men's clocks don't strike a "midnight" toll heralding an end to fertility the way menopause does for women, male fertility, testosterone levels, and sexuality all do decline with age. Dr. Fisch's book emphasizes that even young men can have testosterone levels as low as those of much older men, leading to infertility, sexual problems, and other serious health issues. Another startling revelation is that men over thirty-five are twice as likely to be infertile as men younger than twenty-five. In addition, as men age, the quality of their sperm declines significantly, giving rise to an increased chance of a Down syndrome baby, other genetic abnormalities, and miscarriage. Every couple should know all the risks and issues facing men, because these affect two of the most important things in their life: their ability to have children and their capacity to have good sex. *The Male Biological Clock* is must reading for every man and every couple who is struggling to have children or improve their sex life. Many of Dr. Harry Fisch's findings are startling -- beginning with the fact that infertility is not mostly a women's problem -- and he offers many helpful suggestions for how to deal with declining testosterone, changing sexual needs, and the fertility industry. We have all heard stories of men becoming fathers in their seventies or even eighties, yet most of us are unaware that these are dangerously deceptive exceptions. Older men face a number of increased risks as fathers, and often find their sex lives and well-being changing considerably. The good news: Much can be done to slow down and even reverse the effects of a man's biological clock. *The Male Biological Clock* tells you what you need to

know and how you can achieve optimal fertility and sexuality.

Women, Livestock Ownership and Markets Jemimah Njuki 2013-10-23 This book provides empirical evidence from Kenya, Tanzania and Mozambique and from different production systems of the importance of livestock as an asset to women and their participation in livestock and livestock product markets. It explores the issues of intra-household income management and economic benefits of livestock markets to women, focusing on how types of markets, the types of products and women's participation in markets influence their access to livestock income. The book further analyses the role of livestock ownership, especially women's ownership of livestock, in influencing household food security through increasing household dietary diversity and food adequacy. Additional issues addressed include access to resources, information and financial services to enable women more effectively to participate in livestock production and marketing, and some of the factors that influence this access. Practical strategies for increasing women's market participation and access to information and services are discussed. The book ends with recommendations on how to mainstream gender in livestock research and development if livestock are to serve as a pathway out of poverty for the poor and especially for women.

It Starts with the Egg Rebecca Fett 2019-02-28 A practical and evidence-backed approach for improving egg quality and fertility-- fully revised and updated in 2019. The latest scientific research reveals that egg quality has a powerful impact on how long it takes to get pregnant and the risk of miscarriage. Poor egg quality is in fact the single most important cause of age-related infertility, recurrent miscarriage, and failed IVF cycles. Based on a vast array of scientific research, *It Starts with the Egg* provides a comprehensive program for improving egg quality in three months, with specific advice tailored to a variety of fertility challenges-- including endometriosis, unexplained infertility, diminished ovarian reserve, PCOS, and recurrent miscarriage. With concrete strategies such as minimizing exposure to common environmental toxins, choosing the right vitamins and supplements to safeguard developing eggs, and harnessing nutritional advice shown to boost IVF success rates, this book offers practical solutions that will help you get pregnant faster and deliver a healthy baby.

Having Your Baby Through Egg Donation Ellen Sarasohn Glazer 2012-02-15 Increasingly, friends, family members or physicians are asking, "Have you thought about egg donation?" It is asked of women who have lost ovaries (or ovarian function) to cancer treatment, women born without ovaries or having lost them to surgery, women unable to attempt pregnancy until over 30, young women being diagnosed with premature ovarian failure, and gay couples, more and more of whom are considering parenthood. *Having Your Baby Through Egg Donation* is a comprehensive book for people considering parenthood through donated ova, and those supporting them. It takes readers through the decision-making process, focusing on questions they are likely to be asking themselves, including: "Are we candidates for egg donation?" "Will it work?" "How much does it cost?" "How do we find a donor?" "How do we talk about our decision with others?" "How will we tell our children?" Ethical questions related to egg donation are also examined: "Can a donor truly have informed consent?" "Is it ethically correct for donors to receive payment, and, if so, is the payment for 'time and effort' or for their eggs?" In simple, clear, informative, and sensitive language, the book addresses feelings that arise for individuals and couples facing egg donation decisions and provides information, understanding and guidance for prospective families and the professionals who support them in their the journey.

Value chains for nutritious food: Analysis of the egg value chain in the Tigray region of Ethiopia Hirvonen, Kalle 2020-10-07 Eggs have high potential for improving nutrition outcomes in low-income countries, yet very few children in such settings consume eggs on a regular basis despite widespread poultry ownership. To redress this disconnect, a number of interventions have been implemented to improve household production of poultry products, as well as caregiver awareness of the nutritional benefits of eggs and other animal-sourced foods. However, very few of these interventions have tried to leverage food markets to improve nutrition, even though most rural people predominantly rely on markets for the majority of their non-staple food consumption. This study was implemented to better understand the constraints to purchasing eggs for consumption by young children in rural Ethiopia, with a view to informing the design of market-oriented interventions that might cost-effectively increase children's egg consumption. To do so we analyzed secondary datasets on poultry ownership, household and child egg consumption, and retail egg prices to understand egg markets and the egg value chain in Tigray. Similar to other contexts in sub-Saharan Africa, we find that two-thirds of households own poultry, though only one-quarter of young children consumed eggs in the past 24 hours. Although markets in Tigray are well integrated – likely because of the important role of egg aggregators – egg prices remain high. A modest consumption level of 2.5 eggs per person per week would cost around 10 percent of the total budget of households in the poorest quintile of households, even though eggs are more affordable than other animal-sourced foods. We find that egg consumption among young children is not constrained by fasting associated with Orthodox Christianity. High prices are likely the main constraint and are a function of low levels of intensification in egg production, which is dominated by backyard poultry systems characterized by high mortality rates and low productivity.

Bea and Tea Cakes West Hand 2023-06-28 On a beautiful, sun-kissed day, Bea eagerly prepared to embark on a new adventure to the market. With her passion for baking, she envisioned bringing joy to the entire village with her delectable treats. "Mommy, Daddy, I'm off to gather ingredients and bake some adorable tea cakes!" Little Bea exclaimed with pure excitement, a wide grin spreading across her face. As she made her way to the market, Bea couldn't help but feel a sense of anticipation and wonder. The bustling crowds and vibrant colors of the marketplace only fueled her excitement further. After some time, Bea took a look at her checklist. "Hmm, flour, check, sugar, check, milk, check, eggs," she looked inside her bag and then back at the list. "Eggs, I need to buy eggs." After scouring the market for hours, Bea's hopes of baking were dashed as every shop had run out of eggs. Disheartened, she began to walk back home. But that's when she stumbled upon a peculiar sight. Three women were selling eggs, but these were no ordinary eggs. They were a vibrant shade of blue and green, and the hen that laid them seemed just as mysterious as her owners. Curiosity piqued, Bea approached the women and inquired about the eggs. Little did she know, these women were not your average egg vendors. They were witches, and their response to her question was far from ordinary. "How much for a dozen?" With a sinister tone, one of the witches whispered, "The cost may be your life." Bea's heart raced as she realized the gravity of the situation. Would Bea risk her life for a dozen eggs? Or would she turn back and abandon her baking dream? Only time would tell...

Freezing Fertility Lucy van de Wiel 2020-12-15 Analyzes how the possibility of egg freezing changes what it means to be fertile and to age in the 21st century Welcomed as liberation and dismissed as exploitation, egg freezing (oocyte cryopreservation) has rapidly become one of the most widely-discussed and influential new reproductive technologies of this century. In *Freezing Fertility*, Lucy van de Wiel takes us inside the world of

fertility preservation—with its egg freezing parties, contested age limits, proactive anticipations and equity investments—and shows how the popularization of egg freezing has profound consequences for the way in which female fertility and reproductive aging are understood, commercialized and politicized. Beyond an individual reproductive choice for people who may want to have children later in life, *Freezing Fertility* explores how the rise of egg freezing also reveals broader cultural, political and economic negotiations about reproductive politics, gender inequities, age normativities and the financialization of healthcare. Van de Wiel investigates these issues by analyzing a wide range of sources—varying from sparkly online platforms to heart-breaking court cases and intimate autobiographical accounts—that are emblematic of each stage of the egg freezing procedure. By following the egg's journey, *Freezing Fertility* examines how contemporary egg freezing practices both reflect broader social, regulatory and economic power asymmetries and repoliticize fertility and aging in ways that affect the public at large. In doing so, the book explores how the possibility of egg freezing shifts our relation to the beginning and end of life.

Principles of Oocyte and Embryo Donation Mark V. Sauer 2013-03-01 The versatility of oocyte and embryo donation has proven to be extremely valuable to both patients and doctors engaged in reproductive medicine. Originally thought to be applicable only to a rather small subset of infertile women, today busy practices commonly recommend the procedure and it is estimated that nearly all of the 400 or more IVF programs in the United States provide these services. Oocyte and embryo donation has established itself as a mainstay procedure within assisted reproductive care, and the breadth, depth and complexity of practice is deserving of focused attention. Much has changed within the field of oocyte and embryo donation since the publication of the first edition of *Principles of Oocyte and Embryo Donation* in 1998, thus the need for a completely updated and more expansive text. The second edition of this book provides an overview of the major issues affecting men and women engaged in the practice of oocyte and embryo donation. A primary emphasis has been placed on defining the standards of practice that have evolved over the past 30 years, clearly stating the outcomes expected from adhering to these established protocols. Details of both the basic science and the clinical medicine are presented together and attention is also focused on the non-reproductive aspects inherent to this unique method of assisted reproduction that involves opinions from lawyers, ethicists, mental health care professionals and theologians. Oocyte and embryo donation requires a working knowledge of the medicine, the law and the ethics that underlies its foundation. This book is intended to serve as a complete and comprehensive reference for all health care professionals that provide services related to egg donation, reproductive endocrinologists, obstetrician-gynecologists, and fellows and residents entering the fertility field.

Assessing the Medical Risks of Human Oocyte Donation for Stem Cell Research National Research Council 2007-03-22 It is widely understood that stem cell treatments have the potential to revolutionize medicine. Because of this potential, in 2004 California voters approved Proposition 71 to set up a 10-year, \$3 billion program to fund research on stem cells. Under the direction of the California Institute for Regenerative Medicine, this program will pay to build facilities for stem cell research and will fund doctors and scientists to carry out research with the ultimate goal of helping to develop therapies based on stem cells. For this research to move forward, however, will require a steady supply of stem cells, particularly human embryonic stem cells. Those stem cells are collected from developing human embryos created from eggs-or oocytes-harvested from the ovaries of female donors. Thus much of the promise of stem cells depends on women choosing to donate oocytes to the research effort. The oocyte donation process is not without risk, however. Donors are given doses of hormones to trigger the production of more eggs than would normally be produced, and this hormone treatment can have various side effects. Once the eggs have matured in the ovary, they must be retrieved via a surgical procedure that is typically performed under anesthesia, and both the surgery and the anesthesia carry their own risks. Furthermore, given the very personal nature of egg donation, the experience may carry psychological risks for some women as well. With this in mind, in 2006 the California Institute for Regenerative Medicine contracted with the National Academies to organize a workshop that would bring together experts from various areas to speak about the potential risks of oocyte donation and to summarize what is known and what needs to be known about this topic. The Committee on Assessing the Medical Risks of Human Oocyte Donation for Stem Cell Research was formed to plan the workshop, which was held in San Francisco on September 28, 2006. This report is a summary and synthesis of that workshop.

Beyond Second Opinions Judith Steinberg Turiel 2022-09-23 *Beyond Second Opinions* is both an exposé of the risks, errors, and distortions surrounding fertility medicine and an authoritative guide for people seeking treatment. Accessible, comprehensive, and extremely well-informed, this book takes the reader beyond hype to the hard data on diagnoses and treatments. Judith Steinberg Turiel, a consumer health activist and herself a veteran of fertility treatments, uses the most up-to-date medical literature to shed new light on difficult decisions patients face today and on reproductive questions society must begin to address now. Those who are seeking a more balanced perspective to help them make better, more informed decisions will find a wealth of information about current reproductive interventions—from simple fertility pills to dazzling experimental options—as well as a discussion of the non-medical forces (economic and political) that shape an individual's treatment choices and reproductive outcomes. Despite quantities of information showered upon patients, they remain woefully misinformed; some fertility treatments may actually reduce chances for a successful pregnancy and threaten a patient's health. Turiel looks beyond surface claims to the real information, often uncovering counterintuitive findings and sometimes scandalous revelations. She exposes a realm of unregulated expansion, unscientific experimentation, and recent scandal over stolen embryos. Weaving together first-hand accounts, compelling stories, a range of scientific information, and lively anecdotes, Turiel addresses the persistent gulfs that separate medical professionals and health care consumers. In the process she arms laypeople with what they might not learn about infertility practices from doctors, patient education brochures, and the newspaper. Poultry production in Burkina Faso: Potential for poverty reduction and women's empowerment Hoffmann, Vivian 2020-01-31 Poultry rearing is widespread in rural Burkina Faso, and contributes to both the food security and cash income of smallholders farmers. The landlocked status of the country, coupled with increasing demand for poultry in urban areas implies an opportunity for significant, pro-poor growth through this sector. We use data from a survey of 1800 poultry producers to characterize smallholder poultry producers and their practices. We find that 88% of households in program areas raised poultry. While access to vaccination services and veterinary medicines at the village level is high, uptake of these services is limited, especially among smaller producers. Fewer women than men own poultry, but most women report that they control the proceeds from sales of their own birds, indicating the potential for development of the poultry sector to generate relatively equitable gains in terms of gender. Access to credit appears to increase women's poultry ownership, but remains limited, as does women's access to poultry output markets.

When Doctors Become Patients Robert Klitzman 2008 For many doctors, their role as powerful healer precludes thoughts of ever getting sick themselves. When they do, it initiates a profound shift of awareness-- not only in their sense of their selves, which is invariably bound up with the "invincible doctor" role, but in the way that they view their patients and the doctor-patient relationship. While some books have been written from first-person perspectives on doctors who get sick-- by Oliver Sacks among them-- and TV shows like "House" touch on the topic, never has there been a "systematic, integrated look" at what the experience is like for doctors who get sick, and what it can teach us about our current health care system and more broadly, the experience of becoming ill. The psychiatrist Robert Klitzman here weaves together gripping first-person accounts of the experience of doctors who fall ill and see the other side of the coin, as a patient. The accounts reveal how dramatic this transformation can be-- a spiritual journey for some, a radical change of identity for others, and for some a new way of looking at the risks and benefits of treatment options. For most however it forever changes the way they treat their own patients. These questions are important not just on a human interest level, but for what they teach us about medicine in America today. While medical technology advances, the health care system itself has become more complex and frustrating, and physician-patient trust

is at an all-time low. The experiences offered here are unique resource that point the way to a more humane future.

Guidelines for Human Embryonic Stem Cell Research National Research Council 2005-09-15 Since 1998, the volume of research being conducted using human embryonic stem (hES) cells has expanded primarily using private funds because of restrictions on the use of federal funds for such research. Given limited federal involvement, privately funded hES cell research has thus far been carried out under a patchwork of existing regulations, many of which were not designed with this research specifically in mind. In addition, hES cell research touches on many ethical, legal, scientific, and policy issues that are of concern to the public. This report provides guidelines for the conduct of hES cell research to address both ethical and scientific concerns. The guidelines are intended to enhance the integrity of privately funded hES cell research by encouraging responsible practices in the conduct of that research.

Getting Pregnant For Dummies Lisa A. Rinehart 2020-02-04 The hands-on guide that addresses the common barriers to achieving pregnancy and offers tips to maximize your potential for fertility For millions of people, starting a family is a lifelong dream. However, many face challenges in welcoming children into the world. According to the Centers for Disease Control and Prevention (CDC), approximately 12% of women in the US from ages 15 to 44 have difficulty getting pregnant or staying pregnant. A variety of factors exist that can contribute to infertility, such as ovulation disorders, uterine abnormalities, congenital defects, and a host of environmental and lifestyle considerations. But infertility is not just a female problem. For approximately 35% of couples with infertility, a male factor is identified along with a female factor, while in 8% of couples, a male factor is the only identifiable cause. Fortunately, there are many treatment options that offer hope. Getting Pregnant For Dummies discusses the difficulties related to infertility and offers up-to-date advice on the current methods and treatments to assist in conception. This easy-to-read guide will help you understand why infertility occurs, its contributing risk factors, and the steps to take to increase the chances of giving birth. From in vitro fertilization (IVF) to third party reproduction (donor sperm or eggs and gestational surrogacy) to lifestyle changes to understanding genetic information to insurance, legal and medication considerations, this book covers all the information you need to navigate your way to the best possible results. Packed with the latest information and new developments in medical technology, this book: Helps readers find real-life solutions to getting pregnant Covers the latest information on treatments for infertility for both women and men Offers advice on choosing the option best suited for an individual's unique situation Explains the different types and possible causes of infertility issues Provides insight to genetic testing information Provides suggestions for lifestyle changes that help prepare for conception Getting Pregnant For Dummies is an indispensable guide for every woman trying to conceive and for men experiencing infertility issues.

Never Put All Your Eggs in One Bastard Peta Mathias 2016-10-31 Funny, passionate, outrageous and honest, this is a memoir about travel, house renovations, food, music, men and change. 'I've escaped more houses than I've said Hail Marys.' Peta Mathias has been making major moves since leaving home to train as a nurse, before living in Canada, London and later France, where she set up her own restaurant. Although she returned to New Zealand, writing food books and making television series, she continued to yoyo back to Europe and started culinary tours to Spain, Italy, Morocco, India, Vietnam, and the recurring attraction: France. In this 'memoir of sorts', Peta looks back at the patterns of her life while she embarks on the next big stage in it: selling her beloved cottage in Auckland to buy a dilapidated old house in Uzès in the south of France and transforming the old wreck into a stylish home and cooking school. This new domesticity is set against her nomadic instincts and past history of running away from all conventional expectations of settling down. Spiced with recipes, the thrills and tribulations of reinventing yourself and her trademark humour, this book is really about never putting all your eggs in one bastard.

The Cradle Will Fall Brown Sands 2004-06 This book is about arrogance and the cavalier attitude of a generation toward relationships, sex and conception. The Cradle Will Fall exposes the chaos and pain that follows the selling of eggs and sperm without thinking it result in offspring: human beings. The attempts at cover up, the lies and deceit by Lisle's parents, Stefan and Patch, showcases their selfishness and the disregard for parenting that resulted in murder and suicide. Patch falls madly in love with Stefan, a sperm donor, who uses her and his other women to sell their eggs. Stefan a lover to three generations of women directs his hate and anger towards women by overloading clinics in a small area with his sperm. The women in the area and women in his life become intertwined forever, because of his deceit and rage. Myrl grew up thinking that her father had died only to find out that they had already met: had a relationship. Patch, her mother, told her the devastating truth about her father on the same day she told her that her wedding plans with Lisle must stop immediately. Enveloped with hopelessness: Myrl, Lisle, Caro, Negril and Beverli found the passion and strength to weave through the treachery and disloyalty of their parents to find lasting love.

Eggs Unscrambled Agnes Fischer 2017-04-25 Everything you need to know about egg freezing . . . because your most productive years coincide with your most reproductive years. "I have plenty of time to think about having kids . . ." "I've always liked the idea of having kids, but I never met the right partner . . ." "Can't I freeze my eggs later . . . ?" Sound familiar? Eggs Unscrambled is the girlfriend's guide to everything you need to know about your reproductive options, especially the groundbreaking technology that has revolutionized the modern woman's life: oocyte cryopreservation. With the help of NYU Langone Fertility Center's Dr. Nicole Noyes and Dr. Sarah Druckenmiller, Fischer debunks common misconceptions about fertility, offers no-nonsense details of the egg freezing process, and lays out a real plan to help you make important life-changing decisions in an informed way. THE TRUTH: —The number of eggs in a woman's ovaries peaks while she is still in the womb, and it is all downhill from there! —Women only spend about twelve minutes every year talking to their gynecologists. —Men have a biological clock, too. THE LIES: —Getting pregnant is easy. —Prince Charming will come, one day. —You have all the time in the world—even into your forties—to get pregnant. THE ESSENTIAL QUESTIONS: —At what age should you start considering egg freezing? —Are you willing to be a single mom? —Can you afford the expensive procedure?

Bea and Tea Cakes (Chinese Version) West Hand 2023-07-17 On a beautiful, sun-kissed day, Bea eagerly prepared to embark on a new adventure to the market. With her passion for baking, she envisioned bringing joy to the entire village with her delectable treats. "Mommy, Daddy, I'm off to gather ingredients and bake some adorable tea cakes!" Little Bea exclaimed with pure excitement, a wide grin spreading across her face. As she made her way to the market, Bea couldn't help but feel a sense of anticipation and wonder. The bustling crowds and vibrant colors of the marketplace only fueled her excitement further. After some time, Bea took a look at her checklist. "Hmm, flour, check, sugar, check, milk, check, eggs," she looked inside her bag and then back at the list. "Eggs, I need to buy eggs." After scouring the market for hours, Bea's hopes of baking were dashed as every shop had run out of eggs. Disheartened, she began to walk back home. But that's when she stumbled upon a peculiar sight. Three women were selling eggs, but these were no ordinary eggs. They were a vibrant shade of blue and green, and the hen that laid them seemed just as mysterious as her owners. Curiosity piqued, Bea approached the women and inquired about the eggs. Little did she know, these women were not your average egg vendors. They were witches, and their response to her question was far from ordinary. "How much for a dozen?" With a sinister tone, one of the witches whispered, "The cost may be your life." Bea's heart raced as she realized the gravity of the situation. Would Bea risk her life for a dozen eggs? Or would she turn back and abandon her baking dream? Only time would tell...

Sex Cells Rene Almeling 2011-09-20 "What happens when sex cells sell? Do human bodies become degraded objects of commerce? Challenging simplistic accounts of commodification, Almeling offers a compelling analysis of contemporary markets for eggs and sperm. A superb contribution to 21st century economic sociology." -Viviana A. Zelizer, author of *Economic Lives: How Culture Shapes the Economy* "This is a highly informative book. Almeling provides a balanced approach to this highly controversial subject. Although you might be conflicted by the ethical issues, you will definitely be extremely well-informed when you finish this book." -Alan H. DeCherney, MD, National Institute of Child Health and Human Development "Almeling offers a wonderfully thoughtful analysis and an innovative cultural lens for viewing the gendered lives of sex cells and their commodification in the contemporary USA." -Rayna Rapp, author of *Testing Women, Testing the Fetus: The Impact of Amniocentesis in America*

Ways to Sell What You Grow - Making Money with Your Farm Selling Agricultural Products Darla Noble 2015-01-09 Ways to Sell What You Grow - Making Money with Your Farm Selling Agricultural Products Table of Contents Introduction Chapter 1: Agriculture and the Internet Chapter 2: Networking Equals Sales Chapter 3: Local Outlets Chapter 4: Cutting out the Middle Man Chapter 5: Good Business Conclusion Author Bio Introduction There was a time when farmers took their excess eggs, cream, and butter to town on Saturday to trade for coffee, sugar, flour, baking powder, and other things such as nails, fabric, and shoes they couldn't grow or produce for themselves. The store owner would then have eggs, cream, and butter to sell to the people living in the community who did not farm. The 'system' worked; everyone's needs were met and they were happy. That's not the way it is done today, though, is it? Today's farmers are either: A—large-scale producers who grow and sell commercially for a large corporation such as Del Monte®, Tyson® or one of the other major players in the industry. These farmers depend on government policies and programs and the businessman's thoughts and decisions in regards to what is going to put the most money in their pockets. This leaves these farmers wearing two very big hats—the one of farmer and the one of businessman trying to meet the demands of corporate America. B—small producers (like you, most likely) who raise and produce livestock, food, and grain/hay for themselves and (hopefully) some of the people living in their own community who buy what they take to the farmer's market or directly off their farm. This does somewhat resemble the days of old, except for the fact that you have a much smaller customer base. I say this because the number of people buying from the grocery store is vastly larger than the number of people buying from people like you. But what would you say if I told you there are ways to narrow those margins and to make your products available to the masses without being swallowed up by the corporate jungle? If you would say 'sign me up', then keep reading, because that's what this book is all about. By reading this book you will discover ways to reach out to potential customers (literally) around the world. You will discover how and why networking can expand your earning potential, why the middle man isn't always necessary, and how doing away with 'him' will increase your bank account. Yes, this will require you to put on a business hat, but it's one that actually fits and can be

worn comfortably. So get comfortable and get ready to make your world-wide debut in the world of agriculture.

The Modern Farm Hen Chesla C Sherlock 2021-01-05 Originally Published 1922 Features 69 Illustrations Newly Edited with new typesetting for ease of reading. Contains some archaic punctuation. Advice, building plans, wisdom and recipes for anyone interested in building a profitable business from raising chickens for eggs and meat. From the Preface of the book: A few farmers have recognized the fine profit to be made from the production of high-class market eggs and the sale of hatching eggs and baby chicks in the breeding season. They have laid out the farm poultry work so that it can be efficiently handled in connection with general farming. And they are making good money. The thought has been with the author for some years that the methods used by these progressive men and women, if placed in a form accessible to other farmers, should do much towards elevating the general standard of the farm hen and would make farm poultry generally more profitable. The result has been the bringing together of this book which is written entirely for farmers and is based upon the experience and the methods of actual farmers. It deals only from the practical standpoint, keeping ever in mind the units and the conditions best adapted for average farm conditions. It attempts to reduce into a formula, as much as possible, every step along the road to poultry success. It should answer many of the questions which people are constantly raising as to the possibilities in poultry for the farmer. It will answer questions of methods, procedure and means. It exists for no other purpose. What Farm Poultry Raisers Are Doing A Practical Farm Flock Unit The Selection of Breeds Buildings and Equipment for the Flocks The Laws and Principles of Breeding Care of the Farm Flock Breeding Pen Natural and Artificial Incubation Successful Brooding of Chicks How to Feed Poultry of All Ages Developing the Young Stock Properly Culling Farm Poultry for Any Purpose Care and Management for "Winter Eggs" Artificial Lighting for Winter Eggs Marketing Farm Eggs Successfully How to Sell and Advertise Stock Poultry Diseases and Remedies This edition is only available in paperback.

100 Questions and Answers about Cancer and Fertility Kutluk H. Oktay 2007-08 Approximately 130,000 of people diagnosed with cancer in the United States each year are in their reproductive years and 1,000,000 cancer survivors are diagnosed during their reproductive years. Whether you're a newly diagnosed cancer patient, a survivor, or loved one of someone suffering from infertility, this book offers help. The only text available to provide both the doctor's and patient's views, 100 Questions & Answers About Cancer & Fertility, provides practical, authoritative answers to 100 of the most common questions asked by cancer patients and survivors about fertility. Written by an ObGyn/reproductive medicine specialist and cancer/fertility patient advocate, with commentary from actual patients, this is an invaluable resource for anyone struggling with the medical, physical, and emotional turmoil of cancer and infertility. "I am a cancer survivor but I am also a Dad. When I look at my three beautiful children and realize that they would not be here if I wasn't told to bank my sperm, I feel overwhelmed with gratitude. They are my life they are my legacy. Every cancer survivor deserves the chance to be a parent, and this book can make it happen!" - Lance Armstrong Chairman Lance Armstrong Foundation See the interview from the "Today" show with authors Lindsay Nohr Beck and Kutluk H.Oktay See the interview from the "Today" show with authors Lindsay Nohr Beck and Kutluk H.Oktay **Then Came You** Jennifer Weiner 2012-05-08 The plans of four women--including a college student egg donor, a working-class surrogate mother, a wealthy woman, and her stepdaughter--are thrown into turmoil when the wealthy woman's husband suddenly dies and names the stepdaughter the unborn baby's guardian.

Exploring the Biological Contributions to Human Health Institute of Medicine 2001-07-02 It's obvious why only men develop prostate cancer and why only women get ovarian cancer. But it is not obvious why women are more likely to recover language ability after a stroke than men or why women are more apt to develop autoimmune diseases such as lupus. Sex differences in health throughout the lifespan have been documented. Exploring the Biological Contributions to Human Health begins to snap the pieces of the puzzle into place so that this knowledge can be used to improve health for both sexes. From behavior and cognition to metabolism and response to chemicals and infectious organisms, this book explores the health impact of sex (being male or female, according to reproductive organs and chromosomes) and gender (one's sense of self as male or female in society). Exploring the Biological Contributions to Human Health discusses basic biochemical differences in the cells of males and females and health variability between the sexes from conception throughout life. The book identifies key research needs and opportunities and addresses barriers to research. Exploring the Biological Contributions to Human Health will be important to health policy makers, basic, applied, and clinical researchers, educators, providers, and journalists-while being very accessible to interested lay readers.

Science and Babies Institute of Medicine 1990-02-01 By all indicators, the reproductive health of Americans has been deteriorating since 1980. Our nation is troubled by rates of teen pregnancies and newborn deaths that are worse than almost all others in the Western world. Science and Babies is a straightforward presentation of the major reproductive issues we face that suggests answers for the public. The book discusses how the clash of opinions on sex and family planning prevents us from making a national commitment to reproductive health; why people in the United States have fewer contraceptive choices than those in many other countries; what we need to do to improve social and medical services for teens and people living in poverty; how couples should "shop" for a fertility service and make consumer-wise decisions; and what we can expect in the future--featuring interesting accounts of potential scientific advances.

The New Eugenics Judith Daar 2017-02-21 A provocative examination of how unequal access to reproductive technology replays the sins of the eugenics movement Eugenics, the effort to improve the human species by inhibiting reproduction of "inferior" genetic strains, ultimately came to be regarded as the great shame of the Progressive movement. Judith Daar, a prominent expert on the intersection of law and medicine, argues that current attitudes toward the potential users of modern assisted reproductive technologies threaten to replicate eugenics' same discriminatory practices. In this book, Daar asserts how barriers that block certain people's access to reproductive technologies are often founded on biases rooted in notions of class, race, and marital status. As a result, poor, minority, unmarried, disabled, and LGBT individuals are denied technologies available to well-off nonminority heterosexual applicants. An original argument on a highly emotional and important issue, this work offers a surprising departure from more familiar arguments on the issue as it warns physicians, government agencies, and the general public against repeating the mistakes of the past.

Women of the Northern Plains Barbara Handy-Marchello 2005 Winner of the 2006 Caroline Bancroft History Prize "Impressively researched and highly readable, Barbara Handy-Marchello's analysis of North Dakota farm women's roles will become the standard by which other works on the subject will be judged." Paula M. Nelson, author of *The Prairie Winnows Out Its Own In Women of the Northern Plains*, Barbara Handy-Marchello tells the stories of the unsung heroes of North Dakota's settlement era: the farm women. As the men struggled to raise and sell wheat, the women focused on barnyard labor--raising chickens and cows and selling eggs and butter--to feed and clothe their families and maintain their households through booms and busts. Handy-Marchello details the hopes and fears, the challenges and successes of these women--from the Great Dakota Boom of the 1870s and '80s to the impending depression and drought of the 1930s. Women of the frontier willingly faced drudgery and loneliness, cramped and unconventional living quarters, the threat of prairie fires and fierce blizzards, and the isolation of homesteads located miles from the nearest neighbor. Despite these daunting realities, Dakota farm women cultivated communities among their distant neighbors, shared food and shelter with travelers, developed varied income sources, and raised large families, always keeping in sight the ultimate goal: to provide the next generation with rich, workable land. Enlivened by interviews with pioneer families as well as diaries, memoirs, and other primary sources, *Women of the Northern Plains* uncovers the significant and changing roles of Dakota farm women who were true partners to their husbands, their efforts marking the difference between success and failure for their families. Barbara Handy-Marchello is a history professor at the University of North Dakota. She has written articles on rural women and is the co-author of *A History of the NDSU Seedstocks Project*. She lives near Fargo, North Dakota.

Fertility Holidays Amy Speier 2016-08-09 Each year, more and more Americans travel out of the country seeking low cost medical treatments abroad, including fertility treatments such as in vitro fertilization (IVF). As the lower middle classes of the United States have been priced out of an expensive privatized "baby business," the Czech Republic has emerged as a central hub of fertility tourism, offering a plentitude of blonde-haired,

blue-eyed egg donors at a fraction of the price. Fertility Holidays presents a critical analysis of white, working class North Americans' motivations and experiences when traveling to Central Europe for donor egg IVF. Within this diaspora, patients become consumers, urged on by the representation of a white Europe and an empathetic health care system, which seems nonexistent at home. As the volume traces these American fertility journeys halfway around the world, it uncovers layers of contradiction embedded in global reproductive medicine. Speier reveals the extent to which reproductive travel heightens the hope ingrained in reproductive technologies, especially when the procedures are framed as "holidays." The pitch of combining a vacation with their treatment promises couples a stress-free IVF cycle; yet, in truth, they may become tangled in fraught situations as they endure an emotionally wrought cycle of IVF in a strange place. Offering an intimate, first-hand account of North Americans' journeys to the Czech Republic for IVF, Fertility Holidays exposes reproductive travel as a form of consumption which is motivated by complex layers of desire for white babies, a European vacation, better health care, and technological success.
