The Impact of Self-service Technologies on Interfirm Relationships Raechel N. Johns 2011

Technology has impacted the way businesses operate in a business-to-business (B2B) context and has influenced services by altering the way services are delivered (Bitner, Ostrom and Meuter, 2002). The increased use of self-service technologies (SSTs) could have a great impact on business-to-business relationships yet there is a shortage of research in the area (Johns and Perrott, 2008). Electronic banking, encouraged by banks as a way to reduce service delivery costs and improve service quality for customers, is one technology that has streamlined business transactions (Sathye, 1999; Hughes and Hughes, 2004). Banking has attempted to move what used to be a physical transaction to one that is virtual and this is having implications for relationships between banks and their customers. Despite this there is little understanding of the impact of self-service technologies on relationships in a business context; do they enhance or hinder these relationships? This thesis reviews the results and implications of an exploratory study conducted with a sample of Australian business bank customers and interviews with six Australian financial institutions. Findings indicate that two customer segments exist - a Transaction-Oriented segment and a Relationship-Oriented segment. Unlike existing literature that states bank customers prefer relationships (Eriksson and Marquardt, 2001), the findings indicate that this is only the case for one segment of business customers. This has implications for trust of the bank; however it does not appear to negatively impact on commitment to the relationship unless a better option becomes available. More broadly, the findings suggest that Relationship Marketing theory is applicable to relationship-oriented

customers; however in the new business context of self-service delivery, traditional theory on relationships does not apply for transaction-oriented customers. Service-Dominant Logic is more applicable in a self-service business-to-business context due to its focus on value co-creation and customised offerings for customers.

The Developmental Course of Romantic Relationships Brian G. Ogolsky 2013-07-18 Recipient of the 2014 International Association for Relationship Researchers Book Award! This multidisciplinary text highlights the development of romantic relationships, from initiation to commitment or demise, by highlighting the historical context, current research and theory, and diversity of patterns.

Engagingly written with colorful examples, the authors examine the joy, stress, power-struggles, intimacy, and aggression that characterize these relationships. Readers gain a better understanding as to why, even after the pain and suffering associated with a breakup, most of us go right back out and start again. Relationships are examined through an interdisciplinary lens –psychological, sociological, environmental and communicative perspectives are all considered. End of chapter summaries, lists of key concepts, and additional readings serve as a review. As a whole the book explores what precipitates success or failure of these relationships and how this has changed over time. Highlights of the book’s coverage: Incorporates both cross-sex and same-sex romantic relationships Examines the roles of gender, race, class, culture, age, and sexuality in relationship development Looks at multiple types of romantic relationships in emerging adulthood, including dating and cohabitation Explores both positive and negative relational processes Analyzes the latest and most important scholarship. The book opens with an introduction followed by a historical overview of the development of relationships. Next relationship development models are examined including the influence of social factors and the interaction of the partners involved. This volume

examines how partners initiate romantic relationships, including infatuation, sexual attraction, and the impact of technology; how cohabitation affects the quality of the future of the relationship; and the individual, social, and circumstantial factors that predict stability or break-ups in romantic relationships. The book ends with an examination of the “dark side” of relationships, and suggestions for future research on romantic pairings. Intended as a supplement for advanced undergraduate or graduate courses in marriage and family, personal/close/intimate relationships, or interpersonal/family communication taught in human development and family studies, psychology, social work, sociology, communication, counseling and therapy, this book also appeals to researchers and practitioners interested in the romantic relationship processes.

The Emergence of the Relationship Economy Scott Allen 2008 The convergence of technology that accelerates the power of relationships and facilitates dynamic communications-- peer to peer and to entire communities--is revolutionary to say the least. The book examines the factors that are influencing the emergence of The Relationship Economy. The book defines The Relationship Economy as: "The people and things we are connected with in our personal networks who or that distribute or consume our capital, which in turn influences our individual production outputs." The book analyzes the factors that are influencing an emerging economy based on the sum of factors driving massive and significant changes to the way everyone will work, play, and live. This emergence will have an especially profound effect on businesses and individuals. While individual factors are self-evident, the collective factors, taken as a whole, are the basis for individual conclusions for strategic opportunities that can be gained from the new economy. The book provides the knowledge, tools and suggested skills necessary for improved comprehension of the strategic issues required to succeed in The Relationship Economy, and provides the context of actions that enable success. It covers an emerging opportunity for the global community of users/consumers/prosumers/citizens, consumer brands, corporations, non-governmental organizations and governments to play a critical role in forging this new carbon neutral economy: The Relationship Economy. This book details an emerging economy, driven by factors that are affecting massive changes to the way people work, play, and live. This emergence will have an especially profound effect on business. While individual factors are self-evident, when taken collectively, they are the basis that individuals use to identify strategic opportunities to be gained from the new economy. Recent Advances in Digital Media Impacts on Identity, Sexuality, and Relationships Wright, Michelle F. 2019-11-29 Between adolescence and adulthood, individuals begin to explore themselves mentally and emotionally in an attempt to figure out who they are and where they fit in society. Social technologies in the modern age have ushered in an era where these evolving adolescents must circumvent the negative pressures of online influences while also still trying to learn how to be utterly independent. *Recent Advances in Digital Media Impacts on Identity, Sexuality, and Relationships* is a collection of critical reference materials that provides imperative research on identity exploration in emerging adults and examines how digital media is used to help explore and develop one's identity. While highlighting topics such as mobile addiction, online intimacy, and cyber aggression, this publication explores a crucial developmental period in the human lifespan and how digital media hinders (or helps) maturing adults navigate life. emerging technologies, educational settings are also challenged to respond to the issues that have arisen as a consequence. This book focuses on that challenge: using psychological theory as a lens to highlight the positive uses of new technologies in relationships and educational settings, and to advocate technological learning opportunities and social support where the misuse and abuse of ICT occurs. *The Impact of Technology on Relationships in Educational Settings* sets out to explore the role of ICTs in relationship forming, social networking and social relationships within our schools and has grown out of the European Cooperation in Science and Technology (COST); Action on cyberbullying, involving 28 participating countries, and two non-COST countries, of which Australia is one. This cutting edge international text offers cross-cultural, psychological perspectives on the positive uses of new and emerging technologies to improve social relationships and examples of best practice to prevent virtual bullying. This comes at a time when much of the focus in current writings has been on the more negative aspects which have emerged as new technologies evolved: cyberbullying, cyber-aggression and cybersafety concerns. This text is ideally suited to researchers and practitioners in the fields of Educational and developmental psychology, as well as those specialising in educational technology and the sociology of education.

The Big Disconnect Catherine Steiner-Adair, EdD. 2014-08-12 Clinical psychologist Catherine Steiner-Adair takes an in-depth look at how the Internet and the digital revolution are profoundly changing childhood and family dynamics, and offers solutions parents can use to successfully shepherd their children through the technological wilderness. As the focus of the family has turned to the glow of the screen—children constantly texting their friends or going online to do homework; parents working online around the clock—everyday life is undergoing a massive transformation. Easy access to the Internet and social media has erased the boundaries that protect children from

damaging exposure to excessive marketing and the unsavory aspects of adult culture. Parents often feel they are losing a meaningful connection with their children. Children are feeling lonely and alienated. The digital world is here to stay, but what are families losing with technology's gain? As renowned clinical psychologist Catherine Steiner-Adair explains, families are in crisis as they face this issue, and even more so than they realize. Not only do chronic tech distractions have deep and lasting effects but children also desperately need parents to provide what tech cannot: close, significant interactions with the adults in their lives. Drawing on real-life stories from her clinical work with children and parents and her consulting work with educators and experts across the country, Steiner-Adair offers insights and advice that can help parents achieve greater understanding, authority, and confidence as they engage with the tech revolution unfolding in their living rooms.

Out of Touch Michelle Drouin 2022-02-01 A behavioral scientist explores love, belongingness, and fulfillment, focusing on how modern technology can both help and hinder our need to connect. A Next Big Idea Club nominee. Millions of people around the world are not getting the physical, emotional, and intellectual intimacy they crave. Through the wonders of modern technology, we are connecting with more people more often than ever before, but are these connections what we long for? Pandemic isolation has made us even more alone. In *Out of Touch*, Professor of Psychology Michelle Drouin investigates what she calls our intimacy famine, exploring love, belongingness, and fulfillment and considering why relationships carried out on technological platforms may leave us starving for physical connection. Drouin puts it this way: when most of our interactions are through social media, we are taking tiny hits of dopamine rather than the huge shots of oxytocin that an intimate in-person relationship would provide. Drouin explains that intimacy is not just

sex—although of course sex is an important part of intimacy. But how important? Drouin reports on surveys that millennials (perhaps distracted by constant Tinder-swiping) have less sex than previous generations. She discusses pandemic puppies, professional cuddlers, the importance of touch, “desire discrepancy” in marriage, and the value of friendships. Online dating, she suggests, might give users too many options; and the internet facilitates “infidelity-related behaviors.” Some technological advances will help us develop and maintain intimate relationships—our phones, for example, can be bridges to emotional support. Some, on the other hand, might leave us out of touch. Drouin explores both of these possibilities.

Futures of Journalism Ville J. E. Manninen 2022-05-04 This book examines how technologies are changing, will change, or could change the relationship between audiences and news media. It highlights how novel technologies could have fundamental implications for the way that news media interact with wider society. The book comprises of four thematic parts. Firstly, it focuses on the impact of technological development on the news media business, exploring how news media uses new technologies to improve their sustainability. Secondly, it considers the ethical dilemmas that arise when audience-news media relationships are transformed by technological development. The third part of the book approaches the effects of novel technologies from the journalists' viewpoint: how do new technologies intervene in the audience-news media relationship through journalistic work? Finally, the fourth part dissects the ways new technologies can impact audience-news media relationships through transforming audience agency, audience preferences and news media's understanding of them.

Technology, Communication, and Couples' Intimacy Emily C. Campbell 2015 "In recent decades, technology development and use have proliferated societies across the world (Cole et al., 2009). Technology is defined as innovative equipment with specific functions that people use to achieve a goal (Parasuraman, 2000). In general, technology advancements have become an integral part of North Americans' daily routines (Duggan, & Brenner, 2013; Rainie, 2010; Smith, 2012). As a result, technology influences the structure and processes of intimate relationships (Hertlein, 2012; Hertlein & Blumer, 2014). Hertlein and Blumer (2014) developed the Couple and Family Technology framework to explain the impacts of technology on intimate relationships. According to this

framework, technology has transformed individuals' interactions including the initiation, maintenance, and termination processes within romantic relationships. The relationship between technology and intimate relationships, however, is multifaceted. Partners' uses of technology can impact their relational intimacy, and couples' pre-existing relationship dynamics can impact how they use technology in their intimate relationships (Campbell & Murray, in press; Hertlein, 2012; Hertlein & Ancheta; Lanigan, 2009; Murray & Campbell, in press). Therefore, couples are confronted with negotiating patterns of technology use in order to become satisfied with ones' own and ones' partners' technology use behaviors. Current literature trends indicate that positive and negative impacts of technology on couples' intimacy are evident (Hertlein & Ancheta, 2014; Hertlein & Blumer, 2014; Murray & Campbell, in press). To date, however, minimal research has been done to identify the individual and relational characteristics that influence technology use on relational intimacy. Therefore, the purpose of this study was to identify individual and relational background characteristics that impact how partners view and use technology, as well as examine the impact partners' use has on their relational intimacy. Specifically, this study was used to determine if there are identifiable groups of people based on the following characteristics: Technology readiness (TR), couple communication, and uses of technology that enhance or reduce couples' intimacy. In addition, the impact of participants' personal and relational background characteristics (i.e., age, gender, relationship duration, and relationship satisfaction) were examined to inform clinicians about different types of technology engagement that can positively or negatively impact couples' intimacy. In this study, it was found that four clusters existed based on scores of TR, communication, intimacy-enhancing and intimacy-reducing uses of technology. Each group was provided with an identification descriptive label (i.e., Secure, Pursuer, Dismissive, and Fearful) based on the unique combination of

variables of each group. Group differences were most relative to the newly developed variables of couple communication (CC) and technology-mediated intimacy (TMI). The demographic variables of age, relationship duration, and gender also contributed to differences among the clusters. A final finding of this study was that partners' intimacy-enhancing and intimacy-reducing uses of technology were significant predictors of relationship satisfaction. The clinical implications of these results and directions for future research are discussed."--Abstract from author supplied metadata.

The Couple and Family Technology Framework Katherine M. Hertlein 2013-07-18 Couples and families worldwide have a constant electronic connection to others, a fact that is influencing the concerns and issues they bring to therapy. The authors of this resource help mental health practitioners to better deal with concerns such as online infidelity, online dating, internet addictions, cyber bullying, and many more by introducing the Couple and Family Technology (CFT) framework, a multi-theoretical approach that doesn't require clinicians to change their preferred clinical approach. The CFT framework acknowledges the ways in which couples navigate their relationship with technology and a partner simultaneously, and it attends to, and in some cases incorporates the role of technology in therapeutic ways. Included in the authors' discussion of how different technologies affect relationships is • a survey of what individuals' motivations of usage are • an examination of the specific issues that emerge in treatment • a study of the risks particularly

relevant to intimate relationships, and • an introduction of the first-ever technology-based genogram. They also examine technological usage across different developmental points in a couple's lifespan, with attention given throughout to people from various cultural backgrounds. Along with the CFT framework, the authors also introduce a new discipline of family research: Couple and Family Technology. This discipline integrates three broad perspectives in family science and helps therapists maintain a systemic focus in assessing and treating couples where issues of the Internet and new media are problematic. Online resources can be accessed by purchasers of the book and include videos, additional case studies, glossary, and forms.

The Digital Invasion Dr. Archibald D. Hart 2013-07-01 In the world of technology, there are just two kinds of people: digital natives and digital immigrants. Digital natives are those born after the advent of the internet. They are comfortable with swift technological change and take the presence of technology in their lives almost completely for granted. They have "digital DNA" flowing through their bodies. On the other hand, digital immigrants are those born before the advent of the internet. Their comfort level with our technology-soaked world is more variable. But they are affected by the digital invasion just as much as their native children. With the latest research supporting them, Dr. Archibald Hart and Dr. Sylvia Hart Frejd uncover both the subtle and the dramatic ways digital technology is changing us from within, focusing their exposé on the impact on the spiritual life of individuals. Through insights from neuroscience and psychology, they offer readers therapeutic and biblical strategies for handling the digital invasion in order to become good stewards of their digital lives. Parents, educators, students, counselors, and pastors will especially appreciate this cultural wake-up call.

phones, tablets, TV, PS and movie and video games. However, these are just the positive attributes of technology; there are also a number of negative effects that it has brought upon the society in general. This research paper seeks to discuss these negative impacts of technology upon the society and the general way of living. Arguably, some of these technological advancements have increased stress levels and isolation within the society. As it appears, technology has had a rational impact on the meaning of “social”. It has touched many different aspects of life including education, communication, transport, war, and even fashion. Many in the society are worried about the rapid transformation in human attention.

Quantified Lives and Vital Data Rebecca Lynch 2017-10-05 This book raises questions about the changing relationships between technology, people and health. It examines the accelerating pace of technological development and a general shift to personalized, patient-led medicine. Such relationships are increasingly mediated through particular medical technologies, drawn together by the authors as 'personal medical devices' (PMDs) - devices that are attached to, worn by, interacted with, or carried by individuals for the purposes of generating biomedical data and carrying out medical interventions on the person concerned. The burgeoning PMD field is advancing rapidly

across multiple domains and disciplines - so rapidly that conceptual and empirical research and thinking around PMDs, and their clinical, social and philosophical implications, often lag behind new technical developments and medical interventions. This timely and original volume explores the significant and under-researched impact of personal medical devices on contemporary understandings of health and illness. It will be a valuable read for scholars and practitioners of medicine, health, science and technology and social science.

Connecting Families Carman Neustaedter 2012-08-28 New technologies are radically changing the way that families connect with one another: we can text our teenagers from work, eat dinner with far-away parents via video link, and instantly upload and share photos after a family day out. Whether we are bridging time or distance, and whether we are enhancing our closest relationships or strengthening the bonds of extended family, as computer technologies alter the communication landscape, they in turn are changing the way we conduct and experience family life. This state of the art volume explores the impact of new communication systems on how families interact - how they share their lives and routines, engage in social touch, and negotiate being together or being apart - by considering a range of different family relationships that shape the nature of communication. Composed of three sections, the first looks at what is often the core of a 'family', the couple, to understand the impact of technology on couple relationships, communication, and feelings of closeness. The second section studies immediate families that have expanded beyond just the individual or couple to include children. Here, the emphasis is on connection for communication,

coordination, and play. The third section moves beyond the immediate family to explore connections between extended, distributed family members. This includes connections between adult children and their parents, grandparents and grandchildren, and adult siblings. Here family members have grown older, moved away from 'home', and forged new families. Researchers, designers and developers of new communication technologies will find this volume invaluable. *Connecting Families: The Impact of New Communication Technologies on Domestic Life* brings together the most up-to-date studies to help in understanding how new communication technologies shape – and are shaped by – family life, and offers inspiration and guidance for design by making clear what families need and value from technological systems.

Morris 2018-12-25 Unexpected ways that individuals adapt technology to reclaim what matters to them, from working through conflict with smart lights to celebrating gender transition with selfies. We have been warned about the psychological perils of technology: distraction, difficulty empathizing, and loss of the ability (or desire) to carry on a conversation. But our devices and data are woven into our lives. We can't simply reject them. Instead, Margaret Morris argues, we need to adapt technology creatively to our needs and values. In *Left to Our Own Devices*, Morris offers examples of individuals applying technologies in unexpected ways—uses that go beyond those intended by developers and designers. Morris examines these kinds of personalized life hacks, chronicling the ways that people have adapted technology to

strengthen social connection, enhance well-being, and affirm identity. Morris, a clinical psychologist and app creator, shows how people really use technology, drawing on interviews she has conducted as well as computer science and psychology research. She describes how a couple used smart lights to work through conflict; how a woman persuaded herself to eat healthier foods when her photographs of salads garnered “likes” on social media; how a trans woman celebrated her transition with selfies; and how, through augmented reality, a woman changed the way she saw her cancer and herself. These and the many other “off-label” adaptations described by Morris cast technology not just as a temptation that we struggle to resist but as a potential ally as we try to take care of ourselves and others. The stories Morris tells invite us to be more intentional and creative when left to our own devices.

Relationships 5. 0 Elyakim Kislev 2022 "The decision to marry was announced after two months of "dating." Zheng Jiajia, 31, a Chinese engineer from the city of Hangzhou carried his wife, Ying-Ying, to the wedding ceremony. She wore a black suit with a red scarf, as traditionally accustomed. With the appearance of a young, slender Chinese woman, Ying-Ying generated warmth and responded dexterously to speech and hugs. At home, Zheng had enabled her to walk and even to help with household chores. Surrounded by his mother and friends, Zheng married his robot wife on March 28, 2017. When asked what he thought was missing, Zheng emotionally replied: "A beating heart."--*Social Informatics* Luca Maria Aiello 2014-12-30
