Making Socialists Jane Martin 2010-10-15 Making Socialists combines a biographical study of a virtually unknown woman with an original exploration of several major themes in late nineteenth- and early twentieth-century political and educational history. More than a local politician, Mary Bridges Adams was among the dynamic late nineteenth-century women activists who sought to transform government policy through socialist initiatives, with the ultimate (utopian) aim of creating a social nation. The author has assembled a thorough range of sources, including new materials that will bring fresh insights to this biography and more generally to Labour Party and socialist

historiography, well-studied topics. The people Adams knew and the circles in which she travelled are particularly attractive features of this book. Foes thought her an awful woman: friends like George Bernard Shaw remembered the power of her oratory. Placed against the circumstances in which she lived and presented as part of a militant and anti-capitalist tradition within labor history, her life story contributes to new ways of seeing both socialist and feminist politics.

Critical Care Outreach Lee Cutler 2006-07-11 Following the publication of the department of health document - Comprehensive Critical Care (2000), the majority of hospitals in England have set up Critical Care Outreach Teams. The Government provided a significant sum of money for hospitals to set up outreach services. There are now calls for an evaluation of their impact. The book is set out in five key sections. Each section features chapters that address the conceptual and real life issues. In each section there is a chapter, set out as a case study example, demonstrating how innovative practices and service developments are going on around critical care outreach. The book will draw upon the knowledge, experience and clinical expertise of senior critical care nurses and doctors from a critical care network. The book will have a definite practical application and will provide tips to enhance practice. * Chapters contain useful 'how to' guides, prompts for critical thinking and case studies. * Very little has previously been published on this topic

Parents and Family Planning Services Ann Cartwright 2017-07-12 Parents and Family Planning Services focuses on parents of a sample of newborns in twelve areas of England and Wales during the 1970s. The parents were asked about their contraceptive practices, attitudes toward different methods of birth control, and opinions of-and experience with-different types of services. General practitioners, health visitors, and doctors at family planning clinics were interviewed about their views and practices. This juxtaposition of the attitudes of parents and professionals highlights the reasons why people do not use effective methods of birth control, and leads to suggestions as to how they could be helped to do so. Several chapters discuss fathers' attitudes and actions, the views of parents and professionals, and the influence of religion, social class, education, and geographic location. The final chapter is concerned with possible changes in contraceptive habits, and the ways in which services can develop to help more women avoid unwanted pregnancies. The work has ongoing policy implications, and also indicates how attitudes and change evolve over time. Parents and Family Planning Services is predicated on the assumption that unwanted fertility is to be avoided. It underscores the need for a proliferation of different sorts of services: more clinics, an increase in the help and advice given at hospitals, the development of a supportive and integrated home service. This volume is a significant contribution to the literature in this vital field. It remains essential reading for both professionals and concerned policy personnel, particularly those

Artificial Hells Claire Bishop 2012-07-24 Since the 1990s, critics and curators have broadly accepted the notion that participatory art is the ultimate political art: that by encouraging an audience to take part an artist can promote new emancipatory social relations. Around the world, the champions of this form of expression are numerous, ranging from art historians such as Grant Kester, curators such as Nicolas Bourriaud and Nato Thompson, to performance theorists such as Shannon Jackson. *Artificial Hells* is the first historical and theoretical overview of socially engaged participatory art, known in the US as "social practice." Claire Bishop follows the trajectory of twentieth-century art and examines key moments in the development of a participatory aesthetic. This itinerary takes in Futurism and Dada; the Situationist International; Happenings in Eastern Europe, Argentina and Paris; the 1970s Community Arts Movement; and the Artists Placement Group. It concludes with a discussion of long-term educational projects by contemporary artists such as Thomas Hirschhorn, Tania Bruguera, Pawe? Althamer and Paul Chan. Since her controversial essay in *Artforum* in 2006, Claire Bishop has been one of the few to challenge the political and aesthetic ambitions of participatory art. In *Artificial Hells*, she not only scrutinizes the emancipatory claims made for these projects, but also provides an alternative to the ethical (rather than artistic) criteria invited by such artworks. *Artificial Hells* calls for a less prescriptive approach to art and politics, and for more compelling, troubling and bolder forms of participatory art and criticism.

The Future of Technology Tom Standage 2005-08-01 From the industrial revolution to the railway age, through the era of electrification, the advent of mass production, and finally to the information age, the same pattern keeps repeating itself. An exciting, vibrant phase of innovation and financial speculation is followed by a crash, after which begins a longer, more stately period during which the technology is actually deployed properly. This collection of surveys and articles from *The Economist* examines how far technology has come and where it is heading. Part one looks at topics such as the “greying” (maturing) of IT, the growing importance of security, the rise of outsourcing, and the challenge of complexity, all of which have more to do with implementation than innovation. Part two looks at the shift from corporate computing towards consumer technology, whereby new technologies now appear first in consumer gadgets such as mobile phones. Topics covered will include the emergence of the mobile phone as the “digital Swiss Army knife”; the rise of digital cameras, which now outsell film-based ones; the growing size and importance of the games industry and its ever-closer links with other more traditional parts of the entertainment industry; and the social impact of technologies such as text messaging, Wi-Fi, and camera phones. Part three considers which technology will lead the next great phase of technological disruption and focuses on biotechnology, energy technology, and nanotechnology.

this book is also available under a Creative Commons (CC-BY-NC-ND) license, thanks to the support of the Wellcome Trust. The Industrial Revolution produced injury, illness and disablement on a large scale and nowhere was this more visible than in coalmining. Disability in the Industrial Revolution sheds new light on the human cost of industrialisation by examining the lives and experiences of those disabled in an industry that was vital to Britain's economic growth. Although it is commonly assumed that industrialisation led to increasing marginalisation of people with impairments from the workforce, disabled mineworkers were expected to return to work wherever possible, and new medical services developed to assist in this endeavour. This book explores the working lives of disabled miners and analyses the medical, welfare and community responses to disablement in the coalfields. It shows how disability affected industrial relations and shaped the class identity of mineworkers. The book will appeal to students and academics interested in disability, occupational health and social history.

Participation in Courts and Tribunals Jacobson, Jessica 2020-09-30 Available Open Access under CC-BY-NC licence Effective participation in court and tribunal hearings is regarded as essential to justice, yet many barriers limit the capacity of defendants, parties and witnesses to participate. Featuring policy analysis, courtroom observations and practitioners' voices, this significant study reveals how participation is supported in the courts and tribunals of England and Wales. Including reflections on changes to the justice system as a result of the COVID-19 pandemic, it also details the socio-structural, environmental, procedural, cultural and personal factors which constrain participation. This is an invaluable resource that makes a compelling case for a principled, explicit commitment to supporting participation across the justice system of England and Wales and beyond. *Reports* Institute of Community Studies 1957

Communism in Britain, 1920 - 39 Thomas P. Linehan 2007 The British Communist Party (CPGB) offered a complete identity that could reach into virtually all aspects of life: personal conduct, moral codes, health and diet, personal hygiene, and aesthetic judgments. Communism in Britain, 1920-39 contends that it functioned as a "political religion" for some joiners who opted to enter the congregation of the communist devoted. Based on extensive use of primary evidence, this is the first study of interwar British communism to set the communist experience within the framework of the life cycle. The CPGB sought to address the communist experience at all the principal phases of life--its reach therefore extended to children and youth and control over the various aspects of the adult experience including marital and kinship relations.

Community Nursing and Primary Healthcare in Twentieth-Century Britain Helen M. Sweet 2007-12-12 This book takes a fresh look at community nursing history in Great Britain, examining the essentially generalist and low profile, domiciliary end of the professional nursing spectrum throughout the twentieth century. It charts the most significant changes affecting the nurse's work on the district including compulsory registration for general nursing, changes in organization, training, conditions of service, and workload. A strong oral history component provides a unique insight into the professional images of district nursing and the complexities of inter- and intra-professional relationships as well as into the changing day-to-day working experiences of the district nurse at 'grass-roots' level. Use of oral history and records of individual nurses attempts to rectify the tendency of nursing history to view nurses as if they were a homogenous group of professionals, thereby recognizing the different experiences of nurses in different regions and environments. The book also considers the degree of influence of medically related technologies and of developments in drugs, materials, communications, and transport on the professional development of district nursing.

Safeguarding Vulnerable Adults and the Law Michael Mandelstam 2008-11-15 The protection of vulnerable adults is a fast emerging area of work for local authorities, the NHS and other agencies. *Safeguarding Vulnerable Adults and the Law*, sets this within a comprehensive legal framework. The relevant law and guidance is extensive. It includes Department of Health guidance (No Secrets), human rights, the regulation of health and social care providers, the barring of carers from working with vulnerable adults, care standards tribunal cases, mental capacity, undue influence, assault, battery, wilful neglect, ill treatment, manslaughter, murder, theft, fraud, sexual offences, data protection and the sharing of information. The book focuses on how these areas of law apply to vulnerable adults, and brings together an extensive body of case law to illustrate this. Also covered is how local authorities and the NHS may themselves be implicated in the harm - through abuse, neglect or omission - suffered by vulnerable adults. For example, in terms of the gross lapses in standards of care, infection control, nutrition and basic dignity sometimes to be found in hospitals. All those working in community care, adult social work, health care and housing will find this book invaluable. Local authorities, the NHS, voluntary organisations and students will find this to be essential reading.

Birth Control, Sex, and Marriage in Britain 1918-1960 Kate Fisher 2006-07-13 The first half of the twentieth century witnessed a revolution in contraceptive behaviour as the large Victorian family disappeared. This book offers a new perspective on the gender relations, sexual attitudes, and contraceptive practices that accompanied the emergence of the smaller family in modern Britain.

Kate Fisher draws on a range of first-hand evidence, including over 190 oral history interviews, in which individuals born between 1900 and 1930 described their marriages and sexual relationships. By using individual testimony she challenges many of the key conditions that have long been envisaged by demographic and historical scholars as necessary for any significant reduction in average family size to take place. Dr Fisher demonstrates that a massive expansion in birth control took place in a society in which sexual ignorance was widespread; that effective family limitation was achieved without the mass adoption of new contraceptive technologies; that traditional methods, such as withdrawal, abstinence, and abortion were often seen as preferable to modern appliances, such as condoms and caps; that communication between spouses was not key to the systematic adoption of contraception; and, above all, that women were not necessarily the driving force behind the attempt to avoid pregnancy. Women frequently avoided involvement in family planning decisions and practices, whereas the vast majority of men in Britain from the interwar period onward viewed the regular use of birth control as a masculine duty and obligation. By allowing this generation to speak for themselves, Kate Fisher produces a richer understanding of the often startling social attitudes and complex conjugal dynamics that lay behind the vast changes in contraceptive behaviour and family size in the twentieth century.

addresses both empirically-validated treatments and accumulated clinical wisdom where research is lacking. Noteworthy features include the following: Content is organized according to DSM-5® categories to make for rapid retrieval of relevant treatment information for the busy clinician. Outcome studies and expert opinion are presented in an accessible way to help the clinician know what treatment to use for which disorder, and how to tailor the treatment to the patient. Content is restricted to the major psychiatric conditions seen in clinical practice while leaving out less common conditions and those that have limited outcome research related to the disorder, resulting in a more streamlined and affordable text. Chapters are meticulously referenced and include dozens of tables, figures, and other illustrative features that enhance comprehension and recall. An authoritative resource for psychiatrists, psychologists, and psychiatric nurses, and an outstanding reference for students in the mental health professions, Gabbard's Treatments of Psychiatric Disorders, Fifth Edition, will prove indispensable to clinicians seeking to provide excellent care while transitioning to a DSM-5® world.
