*Evidence-Based Treatments for Trauma Related Disorders in Children and Adolescents* Markus A. Landolt 2017-02-13 This handbook presents the current evidence-based psychological treatments for trauma related disorders in childhood and adolescence and in addition provides clearly structured, up-to-date information on the basic principles of traumatic stress research and practice in that age group, covering epidemiology, developmental issues, pathogenetic models, diagnostics, and assessment. Each of the chapters on treatment, which form the core of the book, begins with a summary of the theoretical underpinnings of the approach, followed by a case presentation illustrating the treatment protocol session by session, an analysis of special challenges typically encountered in implementing this treatment, and an overview of the current evidence base for the treatment approach. A special section considers modern treatments in particular settings, such as schools, hospitals, and juvenile justice systems, and the concluding chapters provide an integrative discussion on how to treat traumatized children and adolescents and an outlook. The book will be invaluable for clinical child and adolescent psychologists, child and adolescent psychiatrists, psychotherapists, and other mental health professionals working with traumatized children and adolescents.

**Psychological Assessment of Sexually Abused Children and Their Families** William N Friedrich 2002 Designed for professionals in the field of child maltreatment, this authoritative book presents a compelling theoretical framework that guide's assessment of children and adolescents who have been sexually abused and their parents. The book is designed to make it easier for clinicians to select a number of measures or procedures across three dimensions that have considerable clinical relevance - attachment, dysregulations, and self-perception. *Psychological Assessment of Sexually Abused Children and Their Families* features in particular the assessment of sexually aggressive children and an extensive set of interview formats, checklists, and other forms that clinicians will find especially useful in evaluating children and their families. The book is also richly illustrated with case studies.

*Handbook of Child Maltreatment* Jill E. Korbin 2013-11-26 This Handbook examines core questions still remaining in the field of child maltreatment. It addresses major challenges in child maltreatment work, starting with the question of what child abuse and neglect is exactly. It then goes on to examine why maltreatment occurs and what its consequences are. Next, it turns to prevention, treatment and intervention, as well as legal perspectives. The book studies the issue from the perspective of the broader international and cross-cultural human experience. Its aim is to review what is known, but even more importantly, to examine what remains to be known to make progress in helping abused children, their families, and their communities.

**Clinical Applications of Evidence-based Family Interventions** Jacqueline Corcoran 2003 Mental health service delivery systems are increasingly moving toward empirically-validated approaches, and practitioners need guidelines as to how such treatments may be implemented in daily practice. **Encyclopedia of Stress** 2000-04-19 Stress is generally defined as a strain upon a bodily organ or mental power. Depending on its duration and intensity, stress can have short- or long-lasting effects: it has been linked to heart disease, immune deficiency, memory loss, behavioral disorders, and much more. These effects on the individual also have a major impact on health care costs and services, employee productivity, and even violent crime. The Encyclopedia of Stress is the first comprehensive reference source on stressors, the biological mechanisms involved in the stress response, the effects of activating the stress response mechanisms, and the disorders that may arise as a consequence of acute or chronic stress. While other books focus on specific aspects of stress, this three-volume set covers the entire spectrum of topics, with nearly 400 articles in all. In addition to the subjects traditionally associated with the hypothalamic-pituitary-adrenal axis (whereby the brain sends a message to the body to react), the Encyclopedia includes a wide range of related topics such as neuroimmune interactions, cytokines, enzymatic disorders, effects on the cardiovascular system, immunity and inflammation, and physical illnesses. It also goes beyond the biological aspects of stress to cover topics such as stress and behavior, psychiatric and psychosomatic disorders, workplace stress, post-traumatic stress, stress-reduction techniques, and current therapies. Moderators and Mediators of Youth Treatment Outcomes Marija Maric 2015 The study of moderation and mediation of youth treatment outcomes has been recognized as enormously beneficial in recent years. However, these benefits have never been fully documented or understood by researchers, clinicians, and students in training. After nearly 50 years of youth treatment outcome research, identifying moderators and mediators is the natural next step—shifting focus to mechanisms responsible for improved outcomes, identifying youth who will benefit from certain treatments or who are in need of alternative treatments, and recognizing the challenges associated with the study of moderators and mediators and their routine use in clinical practice. *Moderators and Mediators of Youth Treatment Outcomes* examines conceptual and methodological challenges related to the study of moderation and mediation and illustrates potential treatment moderators and mediators for specific disorders. The volume also considers empirical evidence for treatment moderators and mediators of specific disorders and illustrates how theoretical and empirical knowledge regarding moderators and mediators can be harnessed and disseminated to clinical practice. This book will be invaluable to researchers conducting treatment outcome studies (both efficacy and effectiveness), clinicians interested in evidence-based work and in understanding for whom and why certain treatments work, and students of clinical child and adolescent psychology and psychiatry.

Evidence-Based Approaches for the Treatment of Maltreated Children Susan Timmer 2013-11-29 This volume provides an overview of the research describing the effects of child maltreatment on mental health, cognitive and social-emotional development. It offers descriptions of selected empirically based treatments (EBTs) written by scholars associated with its development, training, or research on its effectiveness. Each contributor presents the theoretical foundation of the EBT and evidence of its efficacy, describes the treatment process and illustrates this process with a case study of its use with a maltreated child, and discusses possible limitations. Following the chapters describing the interventions, the editors address key issues of the dissemination and implementation of these EBTs. They describe the strategies the selected interventions have used to ensure treatment fidelity in training and dissemination from the perspective of implementation science's core components of implementation. The challenges of implementing EBTs, and the difficulty of fitting protocol to the reality of clinical practice in community mental health settings are also discussed. This volume offers a central source of information for students and practitioners who are seeking effective interventions to address problems associated with child maltreatment.

*Child Sexual Abuse* Esther Deblinger 2016 'Child Sexual Abuse' describes a premier empirically supported treatment approach for children, adolescents, and non-offending parents/caregivers impacted by child sexual abuse.

**Child Sexual Abuse** Esther Deblinger 2015-10-21 Based on over 25 years of research, *Child Sexual Abuse, Second Edition* describes a premier, empirically supported treatment approach for children, adolescents, and non-offending parents/caregivers impacted by child sexual abuse. Developed to provide support and to alleviate symptoms and problem behaviors in children and adolescents, Trauma-Focused Cognitive Behavioral Therapy (TF-CBT) for child sexual abuse incorporates treatment components that provide children and their caregivers with education and coping skills training, while simultaneously addressing the trauma. This book describes the nuts and bolts of treatment including trauma narrative development and processing activities that help to alleviate children's distress and feelings of shame associated with the abuse. Parents are also taught effective behavior management skills, and treatment often culminates with a focus on parent-child communication and enhancing safety and future

development. This highly effective treatment model can be delivered in outpatient, school-based, residential, home, and/or group settings.

**Treating Sexually Abused Children and Their Nonoffending Parents** Esther Deblinger 1996 Empirical evidence increasingly indicates that cognitive-behavioural therapy techniques can be used successfully to treat clients who have been sexually abused. An ideal guide for practitioners of any theoretical orientation, this practical manual has been designed specifically for therapists who want to use this approach to treat sexually abused children and their non-offending parents. The authors illustrate theoretically sound treatment using sample therapist-client dialogue, examples and exercises. Issues explored include: gradual exposure; modelling; coping skills training; education regarding sexuality, sexual abuse and personal safety skills; and behaviour management skills. Deblinger and Heflin skilfully introduce h

*The Use of the Creative Therapies with Sexual Abuse Survivors* Stephanie L. Brooke 2007 This book is a useful reference for anyone seeking to provide therapy to survivors of sexual abuse. The approach represented here is a holistic one that utilizes various approaches to heal the various manifestations of sexual abuse trauma. Since the acts associated with such abuse are often so difficult to discuss, this book presents several methods of communicating these unspeakable horrors nonverbally, allowing the survivor to express their trauma with less difficulty. This approach seeks to use the actions of the body to heal the mind. This text contains information relevant to treatment for children, adolescents, and adults, as well as male or female, and in group or individual settings. Many useful activities are outlined and illustrations are provided as examples.

**Enhancing the Well-being of Children and Families Through Effective Interventions** Colette McAuley 2006 This reader compares up-to-date policy and research evidence from the UK and USA on the effectiveness of core child welfare interventions. The text shows how knowledge of effective interventions can be used to improve assessment of needs, and planning and reviewing services to children and their families.

*Encyclopedia of Cognitive Behavior Therapy* Stephanie Felgoise 2006-06-18 One of the hallmarks of cognitive behavior therapy is its diversity today. Since its inception, over twenty five years ago, this once revolutionary approach to psychotherapy has grown to encompass treatments across the full range of psychological disorders. The Encyclopedia of Cognitive Behavior Therapy brings together all of the key aspects of this field distilling decades of clinical wisdom into one authoritative volume. With a preface by Aaron T. Beck, founder of the cognitive approach, the Encyclopedia features entries by noted experts including Arthur Freeman, Windy Dryden, Marsha Linehan, Edna Foa, and Thomas Ollendick to name but a few, and reviews the latest empirical data on first-line therapies and combination approaches, to give readers both insights into clients' problems and the most effective treatments available. • Common disorders and conditions: anxiety, depression, OCD, phobias, sleep disturbance, eating disorders, grief, anger • Essential components of treatment: the therapeutic relationship, case formulation, homework, relapse prevention • Treatment methods: dialectical behavior therapy, REBT, paradoxical interventions, social skills training, stress inoculation, play therapy, CBT/medicine combinations • Applications of CBT with specific populations: children, adolescents, couples, dually diagnosed clients, the elderly, veterans, refugees • Emerging

problems: Internet addiction, chronic pain, narcolepsy pathological gambling, jet lag All entries feature reference lists and are cross-indexed. The Encyclopedia of Cognitive Behavior Therapy capably fills practitioners' and educators' needs for an idea book, teaching text, or quick access to practical, workable interventions.

*Cognitive Behavioural Therapy for Child Trauma and Abuse* Kevin Ronan 2010-05-15 The effects of trauma and abuse on children can be long-lasting, acute and damaging. Evidence suggests that cognitive behavioural therapy (CBT) is a highly effective form of psychotherapy to help children to overcome these effects. This book uses an evidence-based CBT treatment model to assist children and adolescents aged 9-15 years to resolve trauma symptoms and increase their coping skills. The approach is made up of 16 step-by-step sessions to carry out with the young person, and includes worksheets and fun activities using arts and crafts. The model uses four phases: strengthening the child's psychosocial context; enhancing their coping skills; processing their trauma through gradual exposure; and addressing special issues that the child may have and preventing relapse. The child keeps a scrapbook for the duration of the programme in which they keep worksheets, artwork and any other activities they carry out. The approach is designed for individual therapy but also includes sessions for parents and caregivers. With photocopiable worksheets and easy to follow sessions, this will be an invaluable resource for all practitioners working with traumatised and abused children, including therapists, psychologists, counsellors, health professionals and social workers.

**Child Sexual Abuse** Esther Deblinger 2015 Preceded by: Treating sexually abused children and their nonoffending parents: a cognitive behavioral approach / Esther Deblinger, Anne Hope Heflin. c1996.

Treating and Preventing Adolescent Mental Health Disorders Dwight L. Evans 2017 Sponsored by the Adolescent Mental Health Initiative of the Annenberg Public Policy Center (APPC) of the University of Pennsylvania and the Annenberg Foundation Trust at Sunnylands Trust, Treating and Preventing Adolescent Mental Health Disorders, Second Edition, provides a major update since the first edition in 2005. It addresses the current state of knowledge about the major mental health disorders that emerge during adolescence, including updated DSM-5 diagnostic criteria. Here, six commissions established by the APPC and the Sunnylands Trust pool their expertise on adolescent anxiety, schizophrenia, substance use disorders, depression and bipolar disorders, eating disorders, and suicidal behavior in sections that thoroughly define each disorder, outline and assess available treatments, discuss prevention strategies, and suggest a research agenda based on what we know and don't yet know about these various conditions. Two additional behavioral disorders--gambling and internet addiction--are covered in this second edition. As a meaningful counterpoint to its primary focus on mental illness, the volume also incorporates the latest research from a seventh commission--on positive youth development--which addresses how we can fully prepare young people to be happy and successful throughout their lives. Concluding chapters discuss overarching issues regarding the behavioral and mental health of adolescents: overcoming the stigma of mental illness, the research, policy, and practice context for the delivery of evidence-based treatments, and the development of a more robust agenda to advance adolescent health. Integrating the work of eminent scholars in both psychology and psychiatry, this work will be an essential volume for academics and practicing clinicians and will serve as a wake-up call to mental health professionals and policy makers alike about the state of our nation's response to the needs of adolescents with mental disorders.

**Cognitive-Behavioral Strategies in Crisis Intervention** Frank M. Dattilio 2012-08-22 This book has been replaced by Cognitive-Behavioral Strategies in Crisis Intervention, Fourth Edition, ISBN 978-1-4625-5259-7.

**Handbook of PTSD, First Edition** Matthew J. Friedman 2007-05-29 Unparalleled in its breadth and depth, this state-of-the-art handbook reviews current scientific advances in understanding trauma and PTSD, discusses the implications for clinical practice, and evaluates the status of evidence-

based assessment and treatment. The foremost authorities in the field examine posttraumatic psychological reactions on multiple levels, from genes and neurocircuitry to gender and lifespan development. Established and emerging psychological, medical, and public health interventions are discussed in depth, as are issues in tailoring treatment to the needs of different populations. Special topics include forensic issues, resilience, and prevention. The integrative concluding chapter presents a reasoned agenda for future research.

**The Practice of Child Therapy** Richard J. Morris 2008 Consistent with previous editions, this book assembles in a single volume summaries of the treatment literature and treatment procedures of the most common childhood behavior disorders facing persons who practice in applied settings--clinics, schools, counseling centers, psychiatric hospitals, and residential treatment centers. Its 16 chapters cover the historical context of child and adolescent therapy; obsessive compulsive disorders; childhood depression; childhood fears, phobias and related anxieties; attention-deficit hyperactivity disorder; academic problems; conduct disorder; somatic disorders; autism spectrum disorder; intellectual disabilities; children medically at risk; sexual and other abuse of children; child and adolescent psychopharmacotherapy; prevention; and child therapy and the law. Key features include: Treatment Orientation--Although some chapters include a discussion of theoretical issues, the primary emphasis is on intervention techniques and strategies for changing various behavior and learning problems. Case examples are often used to illustrate treatment procedures. Empirical Orientation--While most authors have adopted a broad-based behavioral or cognitive-behavioral orientation, they were encouraged to review the entire treatment literature and to construct their presentations on the basis of empirically supported treatment techniques and procedures. Psychopharmacotherapy Chapter--The chapter on child and adolescent psychopharmacotherapy focuses on psychopharmacological interventions rather than on which drugs should be prescribed for specific behavior or learning problems. Author Expertise--Each chapter is written by experts who are well qualified to discuss treatment practices for the specific topic under discussion. This book is intended for individuals who have entered or plan to enter the mental health profession or such related professions as counseling, special education, nursing and rehabilitation. It is especially useful for individuals taking child and adolescent therapy and intervention courses and practicum courses. Finally, it is suitable for persons who work in applied settings including clinics, schools, counseling centers, psychiatric hospitals, and residential treatment centers.

Child Protective Services Diane DePanfilis 2003 From the Preface: This manual, *Child Protective Services: A Guide for Caseworkers*, examines the roles and responsibilities of child protective services (CPS) workers, who are at the forefront of every community's child protection efforts. The manual describes the basic stages of the CPS process and the steps necessary to accomplish each stage: intake, initial assessment or investigation, family assessment, case planning, service provision, evaluation of family progress, and case closure. Best practices and critical issues in casework practice are underscored throughout. The primary audience for this manual includes CPS caseworkers, supervisors, and administrators. State and local CPS agency trainers may use the manual for preservice or inservice training of CPS caseworkers, while schools of social work may add it to class reading lists to orient students to the field of child protection. In addition, other professionals and concerned community members may consult the manual for a greater understanding of the child protection process. This manual builds on the information presented in *A Coordinated Response to Child Abuse and Neglect: The Foundation for Practice*. Readers are encouraged to begin with that manual as it addresses important information on which CPS practice is based--including definitions of child maltreatment, risk factors, consequences, and the Federal and State basis for intervention. Some manuals in the series also may be of interest in understanding the roles of other professional groups in responding to child abuse and neglect, including: Substance abuse treatment providers; Domestic violence victim advocates; Educators; Law enforcement personnel. Other manuals address special issues, such as building partnerships and working with the courts on CPS cases.

Treatment of Traumatized Adults and Children Allen Rubin 2009-07-23 Praise for Treatment of Traumatized Adults and Children "A major stumbling

block to adoption of evidence-based practice in the real world of clinical practice has been the absence of clinician-friendly guides. Such guides need to be understandable, free of technical research jargon, infused with clinical expertise, and rich with real-life examples. Rubin and Springer have hit a home run with this series, which has all of these characteristics and more." —Edward J. Mullen, Willma & Albert Musher Chair and Professor, Columbia University "Rubin and Springer have assembled the wisdom of leading practitioners of evidence-based practice interventions, enhancing the likelihood that these practices will be adopted by helping professionals. Written in the language of practitioners, this book represents an exemplar for dissemination of evidence-based practice information." —Joanne Yaffe, Associate Professor, University of Utah College of Social Work

**Helping Abused and Traumatized Children** Eliana Gil 2011-03-11 Presenting an integrative model for treating traumatized children, this book combines play, art, and other expressive therapies with ideas and strategies drawn from cognitive-behavioral and family therapy. Eliana Gil demonstrates how to tailor treatment to the needs of each child by using both directive and nondirective approaches. Throughout, practical clinical examples illustrate ways to target trauma-related symptomatology while also helping children process painful feelings and memories that are difficult to verbalize. The book concludes with four in-depth cases that bring to life the unique situation of each child and family, the decision-making process of the therapist, and the applications of developmentally informed, creative, and flexible interventions.

**Group Work with Populations at Risk** Geoffrey L. Greif 2017 Group Work with Populations at Risk, Fourth Edition is a fundamental resource for practitioners in health and mental health settings and a comprehensive guidebook of group work skills. Geared toward students and professionals gaining a beginning understanding of groups, this volume describes how to work with vulnerable populations. The first chapters, new additions to this edition and written by a new co-editor, provide overarching skills and techniques that apply across group work settings and populations. These skills, along with case examples, provide a template for practice with groups. The vulnerable populations that are addressed include returning war veterans, immigrants, the aging and their caregivers, children and adults who have been abused, and people struggling with substance abuse issues, cancer, and chronic mental illness. New chapters have been added for survivors of sex trafficking, children in need of social skills training, people who experienced intimate partner violence, parents who are homeless, and fathers who are incarcerated. Each chapter (designed to stand alone for easy reference) describes the population and reviews the relevant literature, identifies themes and practice principles, presents case illustrations, provides evaluation guidance, and refers readers to key references and web resources.

**Case Studies in Family Violence** Robert T. Ammerman 2012-12-06 Since the publication of the first edition in 1991, there has been substantial progress in our understanding of the etiology and associated features of domestic violence. As in the first edition, this book elucidates and highlights the complex multidisciplinary issues facing clinicians who work with family violence cases. Each chapter combines two illustrative cases with a broader discussion of the issues that are encountered by clinicians working with families that engage in abuse or neglect.

Follette 2006-01-17 This volume presents cutting-edge cognitive and behavioral applications for understanding and treating trauma-related problems in virtually any clinical setting. Leading scientist-practitioners succinctly review the "whys," "whats," and "hows" of their respective approaches. Encompassing individual, group, couple, and parent-child treatments, the volume goes beyond the traditionally identified diagnosis of PTSD to include strategies for addressing comorbid substance abuse, traumatic revictimization, complicated grief, acute stress disorder, and more. It also offers crucial guidance on assessment, case conceptualization, and treatment planning.

*Building Strengths and Skills* Jacqueline Corcoran 2005 Corcoran (social work, Virginia Commonwealth U.) provides social service and mental health professionals with practice models for helping clients identify resources to help themselves as well as areas where their skills can be increased.

Understanding Child Maltreatment Maria Scannapieco 2005-02-10 Child maltreatment professionals from all disciplines struggle to find better ways of understanding and treating the families and children affected by maltreatment. Since the mid-1960s, the "battered child syndrome," and recent high-profile abuse cases, a plethora of research and literature on child maltreatment has emerged, yet this is the first volume to offer a comprehensive integrated analysis for understanding, assessing, and treating child maltreatment within the ecological framework in a developmental context. This framework systematically organizes and integrates the complex empirical literature in child maltreatment and development, including the often-overlooked period of adolescence. Viewing child maltreatment from an ecological perspective, this volume identifies the risk and protective factors correlated with abuse and neglect. The authors present a comprehensive assessment framework, addressing the multiple developmental and environmental factors unique to each case. This framework fully considers risk and protective factors and their relationship to individuals, families, and environmental elements, presenting a much-needed perspective for today's child protective services workers. *Understanding Child Maltreatment* is the first of its kind. While most books broadly address the developmental consequences of maltreatment, this volume goes further by proposing assessment and intervention strategies based on a deep understanding of each stage of a child's development. Interventions center on the caregiver and the family, with particular attention to parenting skills and the challenges the child may experience within his or her developmental stage. Each chapter emphasizes empirically based interventions and includes a case illustration that guides readers in applying these concepts to their own practice. Providing a comprehensive, nuanced perspective on maltreatment, this book will be invaluable to students, researchers, and professionals.
