Archaeological Obsidian
Studies - M. Steven Shackley
2013-06-29

This volume is the third in the Advances in Archaeological and Museum Science series sponsored by the Society for Archaeological Sciences (SAS). The purpose of this series is to provide summaries of advances in various topics in archaeometry, archaeological science, environmental archaeology, preservation technology, and museum conservation. The SAS exists to encourage interdisciplinary collaboration between archaeologists and colleagues in the natural and physical sciences. SAS members are

drawn from many disciplinary fields. However, they all share a common belief that physical science techniques and methods constitute an essential component of contemporary archaeological field and laboratory studies. The series editors wish to thank the reviewers of each of the chapters in this volume for their excellent comments and suggestions. We also wish to thank Chriss Jones for her invaluable assistance in the preparation of the texts for submission to the publisher. xi
Preface As noted in the introductory chapter, this volume is the second major review of research progress in the study of archaeological obsidian. An earlier book, *Advances in Obsidian Glass Studies: Archaeological and Geochemical Perspectives*,

appeared in 1976. A comparison of the treatment of topics reflected in this earlier work and that contained in this volume not only highlights important advances in the quality and depth of research on archaeological obsidian over more than a quarter of a century but also illustrates more generally some characteristics of developments in the archaeological science field in general.

Archaeology - Kevin Greene 2002

A substantially revised and expanded edition of one of the most widely-used and respected general introductions to the field of archaeology.

Science and Technology in Historic Preservation - Ray A. Williamson 2012-12-06

Technology transfer has played an increasingly important role in historic preservation during the latter half of the twentieth century, a situation attested to by the undertaking of an important congressional study in 1986 that assessed the role

of federal agencies in the field. In this book leading researchers update the earlier findings and contribute state-of-the-art reviews and evaluations of technological progress in their areas of expertise.

Archaeological Research - Peter Peregrine 2016-12

This updated edition of *Archaeological Research* introduces the basic methods of archaeological research, including data collection, analysis, interpretation, as well as a consideration of the state of archaeology today. New to the Second Edition is updated information on geographic information systems and remote sensing strategies, and a greatly expanded discussion of practices in cultural resource management archaeology. This popular, concise textbook explores various research methods, analytical techniques, legal and ethical issues facing archaeologists; includes discussions of the archaeological process and record, sampling and research

design, survey and excavation methods and strategies, recordkeeping, analysis, archaeological dating, presenting results, and research opportunities; is an excellent text for undergraduate students in basic archaeology courses, field methods courses, and field schools

Archaeology and Oral Tradition in Malawi - Yusuf M. Juwayeyi 2020

First comprehensive account of the origins and early history of the Chewa as revealed by oral tradition and archaeology that allows a more accurate picture of a pre-literate society.

Kansas Archaeology - Robert J. Hoard 2016-10-14

From Kanorado to Pawnee villages, Kansas is a land rich in archaeological sites--nearly 12,000 known--that testify to its prehistoric heritage. This volume presents the first comprehensive overview of Kansas archaeology in nearly fifty years, containing the most current descriptions and interpretations of the state's archaeological record. Building

on Waldo Wedel's classic Introduction to Kansas Archaeology, it synthesizes more than four decades of research and discusses all major prehistoric time periods in one readily accessible resource. In Kansas Archaeology, a team of distinguished contributors, all experts in their fields, synthesize what is known about the human presence in Kansas from the age of the mammoth hunters, circa 10,000 B.C., to Euro-American contact in the mid-nineteenth century. Covering such sites as Kanorado--one of the oldest in the Americas--the authors review prehistoric peoples of the Paleoarchaic era, Woodland cultures, Central Plains tradition, High Plains Upper Republican culture, Late Prehistoric Oneota, and Great Bend peoples. They also present material on three historic cultures: Wichita, Kansa, and Pawnee. The findings presented here shed new light on issues such as how people adapted to environmental shifts and the

impact of technological innovation on social behavior. Included also are chapters on specialized topics such as plant use in prehistory, sources of stone for tool manufacture, and the effects of landscape evolution on sites. Chapters on Kansas culture history also reach into the surrounding region and offer directions for future inquiry. More than eighty illustrations depict a wide range of artifacts and material remains. An invaluable resource for archaeologists and students, *Kansas Archaeology* is also accessible to interested laypeople--anyone needing a summary of the material remains that have been found in Kansas. It demonstrates the major advances in our understanding of Kansas prehistory that have applications far beyond its borders and point the way toward our future understanding of the past.

Radiocarbon Dating - R.E. Taylor 2016-06-03

This volume is a major revision and expansion of Taylor's

seminal book *Radiocarbon Dating: An Archaeological Perspective*. It covers the major advances and accomplishments of the 14C method in archaeology and analyzes factors that affect the accuracy and precision of 14C-based age estimates. In addition to reviewing the basic principles of the method, it examines 14C dating anomalies and means to resolve them, and considers the critical application of 14C data as a dating isotope with special emphasis on issues in Old and New World archaeology and late Quaternary paleoanthropology. This volume, again a benchmark for 14C dating, critically reflects on the method and data that underpins, in so many cases, the validity of the chronologies used to understand the prehistoric archaeological record.

application of the chemical sciences to the study of ancient man and his material activities. The text of the book centers on the use of chemical methods, but also refers to the contributions of physics, biology, and genetics to archaeological research. Subjects discussed in the book include the determination of the nature of ancient materials, their provenance and age, the technologies used for the production of man-made materials, and the analysis of ancient human and animal remains (such as bone, dried blood, and coprolites), which yields information on ancient diets, kinship, habitancy, and migratory patterns. New developments in analytical chemistry and in related disciplines, which have contributed to archaeological research since the first edition of the book was published, are dealt within this edition, which also includes: * Updated information on the study of the nature, age, and provenance of ancient materials * New sections on organic, biological

and genetic studies * Glossary * Extensive bibliography The book is intended primarily for archaeologists,

physical anthropologists and students of archaeology and physical anthropology, but will also be of use to conservators, curators, and art historians.

Natural scientists reading it will become acquainted with advances in archaeological research which were made possible only by the application of chemical, physical, and biological methods and techniques.

Encyclopedia of Quaternary Science - Cary Mock
2013-03-25

The second revised edition of the Encyclopedia of Quaternary Science, Four Volume Set, provides both students and professionals with an up-to-date reference work on this important and highly varied area of research. There are lots of new articles, and many of the articles that appeared in the first edition have been updated to reflect advances in knowledge since 2006, when the original articles were

written. The second edition will contain about 375 articles, written by leading experts around the world. This major reference work is richly illustrated with more than 3,000 illustrations, most of them in colour. Research in the Quaternary sciences has advanced greatly in the last 10 years, especially since topics like global climate change, geologic hazards and soil erosion were put high on the political agenda. This second edition builds upon its award-winning predecessor to provide the reader assured quality along with essential updated coverage. Contains 357 broad-ranging articles (4310 pages) written at a level that allows undergraduate students to understand the material, while providing active researchers with a ready reference resource for information in the field. Facilitates teaching and learning. The first edition was regarded by many as the most significant single overview of Quaternary science ever, yet Editor-in-Chief, Scott Elias, has managed to surpass that in this

second edition by securing even more expert reviews whilst retaining his renowned editorial consistency that enables readers to navigate seamlessly from one unfamiliar topic to the next

Ancient Egyptian

Chronology - Erik Hornung
2006-12-30

This volume, the only up-to-date study of its kind in any language, reviews the foundations of Ancient Egyptian chronology before presenting a relative and an absolute chronology for the time span from prehistoric times until the Hellenistic Period.

Quaternary Dating Methods -
Mike Walker 2013-04-30

Material Evidence - Robert Chapman 2014-12-05

How do archaeologists make effective use of physical traces and material culture as repositories of evidence? Material Evidence takes a resolutely case-based approach to this question, exploring instances of exemplary

practice, key challenges, instructive failures, and innovative developments in the use of archaeological data as evidence. The goal is to bring to the surface the wisdom of practice, teasing out norms of archaeological reasoning from evidence. Archaeologists make compelling use of an enormously diverse range of material evidence, from garbage dumps to monuments, from finely crafted artifacts rich with cultural significance to the detritus of everyday life and the inadvertent transformation of landscapes over the long term. Each contributor to Material Evidence identifies a particular type of evidence with which they grapple and considers, with reference to concrete examples, how archaeologists construct evidential claims, critically assess them, and bring them to bear on pivotal questions about the cultural past. Historians, cultural anthropologists, philosophers, and science studies scholars are increasingly interested in working with material things as

objects of inquiry and as evidence - and they acknowledge on all sides just how challenging this is. One of the central messages of the book is that close analysis of archaeological best practice can yield constructive guidelines for practice that have much to offer archaeologists and those in related fields.

Archaeology in Practice -

Jane Balme 2009-02-09

Archaeology in Practice: A Student Guide to Archaeological Analyses offers students in archaeology laboratory courses a detailed and invaluable how-to manual of archaeological methods and provides insight into the breadth of modern archaeology. Written by specialists of material analyses, whose expertise represents a broad geographic range. Includes numerous examples of applications of archaeological techniques. Organized by material types, such as animal bones, ceramics, stone artifacts, and documentary sources, or by

themes, such as dating, ethics, and report writing. Written accessibly and amply referenced to provide readers with a guide to further resources on techniques and their applications. Enlivened by a range of boxed case studies throughout the main text.

Chronometric Dating in Archaeology - R.E. Taylor

2013-06-29

Since World War II, there has been tremendous success in the development of new methods for dating artifacts; the so-called 'radiocarbon revolution' was only the first such discovery. The increasing accuracy of the various new techniques has brought about major changes in archaeological research strategies. This important new text compiles the work of some of today's most innovative archaeologists who summarize progress in their respective techniques over the last 30 years - with an emphasis on developments of the last five - and the status of current research.

- Edward B. Banning

2020-07-27

This second edition of the classic textbook, *The Archaeologist's Laboratory*, is a substantially revised work that offers updated information on the archaeological work that follows fieldwork, such as the processing and analysis of artifacts and other evidence. An overarching theme of this edition is the quality and validity of archaeological arguments and the data we use to support them. The book introduces many of the laboratory activities that archaeologists carry out and the ways we can present research results, including graphs and artifact illustrations. Part I introduces general topics concerning measurement error, data quality, research design, typology, probability and databases. It also includes data presentation, basic artifact conservation, and laboratory safety. Part II offers brief surveys of the analysis of lithics and ground stone, pottery, metal artifacts, bone

and shell artifacts, animal and plant remains, and sediments, as well as dating by stratigraphy, seriation and chronometric methods. It concludes with a chapter on archaeological illustration and publication. A new feature of the book is illustration of concepts through case studies from around the world and from the Palaeolithic to historical archaeology. The text is appropriate for senior undergraduate students and will also serve as a useful reference for graduate students and professional archaeologists.

The Encyclopedia of Caves and Karst Science contains 350 alphabetically arranged entries. The topics include cave and karst geoscience, cave archaeology and human use of caves, art in caves, hydrology and groundwater, cave and karst history, and conservation and management. The Encyclopedia is extensively illustrated with photographs, maps, diagrams, and tables, and has thematic content lists and a comprehensive index to facilitate searching and browsing.

ARCHAEOLOGY - Volume I -

Donald L. Hardesty 2010-06-15
Archaeology is a component of Encyclopedia of Social Sciences and Humanities in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. Archaeology is a road for traveling into the past that is independent of and complementary to documents and memory. The archaeological record provides historical perspectives on

variability and change in human life support systems with the potential for use in planning for future sustainable development. The Theme is organized into four different topics which represent the main scientific areas of the theme: - Foundations of Archaeology; - The Archaeology of Life Support Systems; - World Cultural Heritage; - Preserving Archaeological Sites and Monuments which are then expanded into multiple subtopics, each as a chapter. The first topic deals with historical, methodological, and theoretical foundations of archaeology. The second topic explores the archaeological record of human life support systems and includes chapters on foraging, food production such as farming and nomadic lifestyles, civilizations, water-management systems, and sustainability. World cultural heritage is the third topic. Finally, the fourth topic covers the preservation of cultural memorials such as archaeological sites, landscapes, and monuments.

These two volumes are aimed at the following five major target audiences: University and College Students, Educators, Professional Practitioners, Research Personnel and Policy Analysts, Managers, and Decision Makers, NGOs and GOs. *A Consumer's Guide to Archaeological Science* - Mary E. Malainey 2010-09-28

Many archaeologists, as primarily social scientists, do not have a background in the natural sciences. This can pose a problem because they need to obtain chemical and physical analyses on samples to perform their research. This manual is an essential source of information for those students without a background in science, but also a comprehensive overview that those with some understanding of archaeological science will find useful. The manual provides readers with the knowledge to use archaeological science methods to the best advantage.

It describes and explains the analytical techniques in a manner that the average archaeologist can understand, and outlines clearly the requirements, benefits, and limitations of each possible method of analysis, so that the researcher can make informed choices. The work includes specific information about a variety of dating techniques, provenance studies, isotope analysis as well as the analysis of organic (lipid and protein) residues and ancient DNA. Case studies illustrating applications of these approaches to most types of archaeological materials are presented and the instruments used to perform the analyses are described. Available destructive and non-destructive approaches are presented to help archaeologists select the most effective technique for gaining the target information from the sample. Readers will reach for this manual whenever they need to decide how to best analyze a sample, and how the analysis is performed.
