The Assessment, Evaluation and Rehabilitation of Everyday Memory Problems - Barbara A. Wilson 2013-11-07

In the World Library of Psychologists series, international experts present career-long collections of what they judge to be their finest work—extracts from books, key articles, salient research findings and their major theoretical and practical contributions. This volume of self-selected papers recognises Professor Barbara A. Wilson's major contribution to the study of neuropsychology. Published over a 25-year period, the papers included here address the assessment, treatment and evaluation of rehabilitation provided to people who have memory difficulties arising from an injury or illness affecting the brain. This selection of papers includes work on errorless learning, the natural history of the development of compensatory memory systems, paging systems developed to enhance independent daily living for memory impaired people and single-case experimental designs to appraise the response of individual patients. The final section includes a practical framework for understanding compensatory behaviour, a model of cognitive rehabilitation and a discussion of the dilemmas created by the different aims of neuroscience as opposed to those of clinicians. This book will be of great interest to clinical psychologists, neuropsychologists, occupational therapists and speech and language therapists, along with anyone who is interested in reducing the impact of memory problems on people who have suffered brain injury.

Obsessive-Compulsive Disorder - Christopher Pittenger 2017

Obsessive-compulsive disorder (OCD) affects one person in 40 and can cause great suffering. This volume provides the first comprehensive summary of our understanding of this enigmatic condition, summarizing current work ranging from genetics and neurobiology through cognitive psychology, treatment, personal experiences, and societal implications

Psychological Assessment of Veterans - Shane S. Bush 2014

Psychological assessment is practiced in wide-ranging settings to address the varied clinical and administrative needs of veteran populations. Such assessment blends record review, clinical interviews of the veteran and collateral sources of information, behavioral observations, and psychological testing. This book promotes the care and well-being of veterans by bringing together knowledgeable and experienced psychologists to discuss a range of psychological assessment methods and procedures. It aims to help patients and their families, healthcare providers, and concerned citizens gain an improved understanding of veterans' cognitive functioning, emotional states, personality traits, behavioral patterns, and daily functioning. The book begins with a history of the psychological assessment of veterans and investigates its efficacy in different settings, including outpatient mental health, long-term care, primary care, home-based primary care, and telemental health. Later chapters address assessment of a variety of disorders or presenting problems, including substance use disorders, psychotic disorders, mood disorders and suicidal thoughts and behavior, PTSD and other anxiety disorders, attention-deficit/hyperactivity disorder, dementia, pain and pain-related disorders, and polytrauma. The book concludes with important special considerations, including assessment of symptom and performance validity, assessment of homeless

veterans and health-related quality of life, and ethical, legal, and professional issues. Psychological Assessment of Veterans provides an essential reference and guide for clinical psychologists, including those working in the subspecialties, and psychology trainees who work with veterans.

Statistical Methods for Quality of Life Studies - Mounir Mesbah 2013-06-29

On October 16 and 17, 2000, we hosted an international workshop entitled "Statistical Design, Measurement, and Analysis of Health Related Quality of Life." The workshop was held in the beautiful city of Arradon, South Brittany, France with the main goal of fostering an interdisciplinary forum for discussion of theoretical and applied statistical issues arising in studies of health-related quality of life (HRQoL). Included were biostatisticians, psychometricians and public health professionals (e.g., physicians, sociologists, psychologists) active in the study of HRQoL. In assembling this volume, we invited each conference participant to contribute a paper based on his or her presentation and the ensuing and very interesting discussions that took place in Arradon. All papers were peer-reviewed, by anonymous reviewers, and revised before final editing and acceptance. Although this process was quite time consuming, we believe that it greatly improved the volume as a whole, making this book a valuable contribution to the field of HRQoL research. The volume presents a broad spectrum of papers presented at the Workshop, and thus illustrates the range of current research related to the theory, methods and applications of HRQoL, as well as the interdisciplinary nature of this work. Following an introduction written by Sir David Cox, it includes 27 articles organized into the following chapters.

Case Studies in Clinical Psychological Science - William O'Donohue 2013-03-14

Case Studies in Clinical Psychological Science demonstrates in detail how the clinical science model can be applied to actual cases. This book's unique structure presents dialogues between leading clinical researchers regarding the treatment of a wide variety of psychological problems.

Schizophrenia Treatment Outcomes - Amresh Shrivastava 2020-02-05

This book analyzes schizophrenia management in the context of recent clinical therapeutic advances that have transformed the measurements and outcomes landscape. Unlike any other resource, this volume carefully develops the social and clinical guidelines that affect the life of the patient and defines its role in schizophrenia treatment outcomes. The text begins by determining the concepts, development, neuroscience, and guidelines for positive outcomes before analyzing the gaps in the literature. The text addresses medical concerns in relation to outcomes in schizophrenic patients, including substance use, impact from antipsychotic medications, and medical comorbidities. The text also covers external determinants that may inhibit positive outcomes, including cultural factors, stigma, and environmental issues. Written by experts in schizophrenia care, this book compiles sound research, current clinical trends, and modern measurement markers into a well-organized compendium that delivers this data into a practical guide for measuring treatment outcomes in patients suffering from the disease. Schizophrenia Treatment Outcomes is the ultimate guide for psychiatrists, psychologists, nurses, social workers, and all medical practitioners interested in improving outcomes for schizophrenia patients.

Learning and Attention Disorders in Adolescence and Adulthood - Sam Goldstein 2011-02-02

Fully revised coverage with the most current diagnoses and treatments for adolescents and adults living with learning and attention disorders Reflecting the most recent and relevant findings regarding Learning Disabilities (LD) and Attention-Deficit/Hyperactivity Disorder (ADHD), this Second Edition of Learning and Attention Disorders in Adolescence and Adulthood provides practitioners in the fields of education and mental health with a set of practical guidelines to assist in the assessment, diagnosis, consultation, and treatment of adolescents and adults struggling with LD and ADHD. The new edition includes: An emphasis on working from strengths—adapting to disabilities and dealing with them successfully on a daily basis New coverage of the causes and long-term implications of LD and ADHD in adolescents and adulthood New

chapters on treatment effectiveness; building resiliency and shaping mindsets; cognitive therapy; and strategic life coaching to help guide individuals with LD and ADHD Contributions from leading researchers, including Noel Gregg, Russell Barkley, Kevin Antshel, and Nancy Mather Drawing on evidence-based techniques to meet the pragmatic demands for intervention, the Second Edition guides school psychologists, counselors, and educators in promoting positive change for adolescents and adults with LD and ADHD as they strive for success in school, work, and home settings.

Neuropsychiatric Symptoms of Movement Disorders - Heinz Reichmann 2014-10-06

This is an up-to-date, comprehensive review of the neuropsychiatry of patients with movement disorders, i.e. Parkinson's disease, Huntington's disease, dystonia and others, by active authorities in the field, with an emphasis on diagnostic and management issues. This book includes critical appraisal of the methodological aspects and limitations of the current research on the neuropsychiatry of movement disorders and on unanswered questions/controversies. Symptomatology and pharmacological aspects of management are discussed, to provide robust information on drug dosages, side effects and interaction, in order to enable the reader to manage these patients more safely. Illustrative cases provide real life scenarios that are clinically relevant and engaging to read. Neuropsychiatric Symptoms of Movement Disorders is aimed at neurologists, movement disorder specialists and psychiatrists and will also be of interest to intensive care doctors, psychologists and neuropsychologists, research and specialist nurses, clinical researchers and methodologists.

Behavioral Neurobiology of Eating Disorders - Roger A.H. Adan 2011-01-18

The intention of this book was to have investigators describe an expert opinion on their field of research and cutting-edge work in their laboratory on the neurobiology and treatment of eating disorders.

Cerebrospinal Fluid Biomarkers - Charlotte E. Teunissen 2022-05-19

This volume covers the latest methods used in clinical neurochemistry laboratories for both clinical practice and research. Chapters in this book discuss topics such as techniques for cerebrospinal fluid (CSF) collection, pre-analytical processing, and basic CSF analysis; an examination of biomarkers including ELISA and automated immunochemical assays for amyloid and tau markers for Alzheimer's disease; the analysis of neurofilaments by digital ELISA; and an example of successful novel immunoassay development. In the Neuromethods series style, chapters include the kind of detail and key advice from the specialists needed to get successful results in your laboratory. Cutting-edge and thorough, Cerebrospinal Fluid Biomarkers is a valuable resource for clinicians and researchers to use in CSF labs and CSF courses.

Disabling Obesity - Paolo Capodaglio 2013-04-04

Obesity is currently regarded as one of the major health challenges of the developed world. Excess body weight is an important risk factor for morbidity and mortality from cardiovascular diseases, diabetes, cancer, musculoskeletal disorders and even psychiatric problems and is estimated to cause nearly 3 million deaths per year worldwide. Obesity is not necessarily associated with comorbidities: there are indeed metabolically healthy obese individuals. Thus, we need to consider individuals presenting simple with obesity separately from those at risk of developing or who have already developed complex clinical states potentially leading to disability. Comorbidities can tip the balance of independence in patients who already have functional limitations mainly due to the excess of mass itself or who develop conditions such as diabetes, cardiovascular conditions, non-alcoholic fatty liver disease, where an abnormal metabolism of adipose tissue prevails. Morbid obesity with comorbidities leading to disability represents a real social and economic burden for National Health Systems worldwide. The presence of multiple and associated comorbidities often represents an obstacle to being admitted to hospitals for the treatment of metabolic diseases. On the other hand, clinical units with optimal standards for the treatment of pathological

conditions in normal-weight patients are often structurally and technologically inadequate for the care of patients with extreme obesity. The aim of this book is to focus on the pathophysiological and rehabilitative aspects of disabling obesity, highlighting multidisciplinary rehabilitation interventions as key to counteracting the disabling aspects of complicated obesity.

Rapid-Eye-Movement Sleep Behavior Disorder - Carlos H. Schenck 2018-09-18

This book describes a sleep disorder belonging to the category of parasomnias (i.e. the sleep behavioral and experiential disorders) characterized by abnormal vocal and motor behaviors in the context of vivid dreams and loss of the customary muscle atonia during the stage of sleep called REM sleep. REM-atonía - one of the defining features of REM sleep, along with rapid-eye-movements and a highly activated brain state - serves a protective function, preventing the dreamer from acting-out dreams and becoming injured. REM sleep behavior disorder (RBD) was first described in 1986 by Schenck and colleagues; since then the understanding of the condition has increased exponentially, also pointing out its strong association with the development of neurodegenerative disorders characterized by alpha synuclein deposition, such as Parkinson's disease, Dementia with Lewy bodies, and Multiple System Atrophy. Furthermore, RBD is now considered one of the earliest markers of ongoing alpha synuclein neurodegeneration, and provides a window of opportunity for testing disease modifying therapies that may slow down or halt the progression of these disorders for which there is currently no cure. Additionally, RBD is today known to be present in more than 50% of patients with narcolepsy-cataplexy, and can also be triggered by the most commonly prescribed antidepressant medications (e.g. SSRIs, venlafaxine). RBD has been documented as occurring, with variable frequency, with virtually every category of neurologic disease and has also helped expand the field of dream research. The volume Editors have pioneered scientific and clinical advances in the field and, partnering with leading sleep clinicians and researchers on this book, have produced an invaluable guide to specialists in sleep medicine, neurology, psychiatry and psychology. There are also strong contributions in this book by leading basic science researchers, and so this book should also appeal to neuroscientists. As stated in the book, "RBD is situated at a strategic and busy crossroads of sleep medicine and the neurosciences. RBD offers great breadth and depth of research opportunities, including extensive interdisciplinary and multinational research opportunities...RBD is an 'experiment of Nature' in which knowledge from the study of motor-behavioral dyscontrol during REM sleep, with dream-enactment, has cast a broad and powerful light on a multitude of Central Nervous System disturbances, their evolution, and their comorbidities."

The English Teacher's Companion - Jim Burke 2008

Teachers and teacher educators asked for: the latest research on literacy more information about national standards ways to consider gender in instruction advice for teaching Advanced Placement classes ideas for teaching media literacy and incorporating technology effectively into instruction even more resources for mentoring new teachers analysis of how trends in society, culture, and politics impact teachers and their classrooms. And Jim delivers. He has revamped his introductory chapters on literacy learning to include up-to-the-minute thinking from the field, and he has incorporated lists of key standards and helpful suggestions for reaching them. His practical strategies turn recent findings on literacy and gender into well-designed, research-based instruction, and his ideas help you meet the very different needs of AP students by understanding their goals and providing them with appropriate challenges.
