Causes and Treatment of Infertility - Marzina Ajrin 2020-03-03

Seminar paper from the year 2020 in the subject Biology - Developmental Biology, grade: c, , course: Pharmacy, language: English, abstract: The aim of this work is to perform a systematic review of literature to determine the causes and treatment aspects of infertility. This work also aims to interpret the findings in the context of recent clinical practices and suggest optimal treatment and management aspects regarding infertility. This review focuses on different factors including the ovulatory factor, utero-tubal peritoneal factor, semen migration factor and the male factor. Some of these infertile conditions are treated as unexplained infertility problems to some extent. This review process deploys a new strategy to translate the recent research findings and evidence-based causes into a simplified focused cause of male and female infertility. Genetics of Human Infertility - P.H. Vogt 2017-09-12

Infertility affects more than one in ten couples worldwide and is related to highly heterogeneous pathologies sometimes only discernible in the germ line. Its complex etiology often, but not always, includes genetic factors besides anatomical defects, immunological interference, and environmental aspects. Nearly 30% of infertility cases are probably caused only by genetic defects. Thereby experimental animal knockout models convincingly show that infertility can be caused by single or multiple gene defects. Translating those basic research findings into clinical studies is challenging, leaving genetic causes for the vast majority of

infertility patients unexplained. Nevertheless, a large number of candidate genes have been revealed by sophisticated molecular methods. This book provides a comprehensive overview on the subject of infertility written by the leading authorities in this field. It covers topics including basic biological, cytological, and molecular studies, as well as common and uncommon syndromes. It is a must-read for human geneticists, endocrinologists, epidemiologists, zoologists, and counsellors in human genetics, infertility, and assisted reproduction.

Female Infertility - Anthony Ekanem 2021-11-30
Far too many women struggle to get pregnant and conceive a child naturally. This generally drives most people to visit a doctor or specialist to find out why they have so much difficulty conceiving and giving birth to healthy, happy babies. In most cases, they're given a diagnosis of infertility. Even with all the advances made by medical science, there remains a possibility that doctors simply can't find a cause for some

peoples' infertility problems. Yet, what most people forget is that traditional, natural remedies often have a far greater success rate than expensive, often painful medical treatments. It's been proven that some fertility treatments prescribed by fertility specialists can increase the risk of contracting ovarian cancer, yet women every day still opt to take expensive medications rather than consider some of the healthier options of trying a holistic approach. What's more, many of the medical treatments, surgeries and pharmaceutical drugs for infertility don't treat the base cause of the problem. Instead, they treat the symptom and attempt to remove it that way. This can sometimes cause more problems than you started with. This Book will look at some reasons for infertility and how using a natural, holistic approach to reversing your infertility problems can greatly improve your chances of conceiving a child of your own without surgery or drugs. So, are you ready to change your life and become a happy mother? If yes, please read on!
