**Androgenetic Alopecia From A to Z** - Konstantinos Anastassakis 2022-10-26

This second of three related volumes, designed as a reference tool for the understanding and treatment of Androgenetic Alopecia and Female Pattern Hair Loss (AGA/FPHL), is structured in 4 sections: 63 dedicated chapters covering every aspect of medical (non-surgical, non-invasive) and nutritional treatment options and clinical effects. FDA-approved hair growth drugs, every frequently prescribed "off-label" or experimental drug, hormones, cosmeceuticals, and popular fraudulent controversial products are all presented in 26 chapters, with figures, tables, algorithms, and thousands of fully updated and balanced literature citations. Filling a gap in the latest literature, Androgenetic Alopecia From A to Z: Drugs, Herbs, Nutrition, and Supplements includes a thorough review of lifestyle and nutritional factors specifically affecting AGA/FPHL, including excessive caloric intake, high-fat diets, caloric deprivation, alcohol abuse, and smoking. The intricate effects of nutrition on hair loss, one of the most neglected and misunderstood fields in Dermatology, are presented as well, with a plethora of clinically valuable information: why food supplements are so popular, the regulatory minefield of supplements, and the life-threatening perils of nutritional supplementation, are all reviewed extensively. Each vitamin, major mineral, and trace element implicated in follicular physiology is reviewed in altogether 24 dedicated chapters according to their specific effects on the hair follicle, food sources, dietary recommendations, and the impact of deficiency or excess. This volume includes a comprehensive chapter on the understanding of Complementary-Alternative Medicine (CAM). CAM is an umbrella term for methods that lie outside evidence-based medicine and a part of a societal trend towards the rejection of science as a method of determining facts. The pitfalls and challenges in understanding botanicals with reported hair growth properties, from publication bias to lack of standardization, as well as their unpredictable pharmacological and physiological effects, are all explained in detail. Finally, all popular botanical products reported to possess hair growth properties are

appraised in 14 dedicated chapters, each including a detailed review of the general effects, the suggested biochemical mechanisms, claimed actions on the hair follicle, all available studies, and hundreds of literature citations. This carefully crafted book will be an invaluable reference tool for dermatologists and all clinical practitioners dealing with Androgenetic Alopecia and Female Pattern Hair Loss and will help them answer challenging patient questions, debunk myths on hair growth drugs, and supplements and navigate patients towards effective and safe treatment schemes.
