Evidence-Based Practices for Children Exposed to Violence - Clare Anderson 2011-08

This report summarizes findings from federal reviews of research studies and program evaluations to help communities improve outcomes for children exposed to violence. It cites evidence-based practices that practitioners and policymakers can use to implement prevention services and activities for these children. In each case, programs and practices that are reviewed are supported by multiple research studies or program evaluations. Charts and tables. This is a print on demand edition of an important, hard-to-find report.

Ending Discrimination Against People with Mental and Substance Use Disorders - National Academies of Sciences, Engineering, and Medicine 2016-09-03

Estimates indicate that as many as 1 in 4 Americans will experience a mental health problem or will misuse alcohol or drugs in their lifetimes. These disorders are among the most highly stigmatized health conditions in the United States, and they remain barriers to full participation in society in areas as basic as education, housing, and employment. Improving the lives of people with mental health and substance abuse disorders has been a priority in the United States for more than 50 years. The Community Mental Health Act of 1963 is considered a major turning point in America's efforts to improve behavioral healthcare. It ushered in an era of optimism and hope and laid the groundwork for the consumer movement and new models of recovery. The consumer movement gave voice to people with mental and substance use disorders and brought their perspectives and experience into national discussions about mental health. However over the same 50-year period, positive change in American public attitudes and beliefs about mental and substance use disorders has lagged behind these advances. Stigma is a complex social phenomenon based on a relationship between an attribute and a stereotype that assigns undesirable labels, qualities, and behaviors to a person with that attribute. Labeled individuals are then socially devalued, which leads to inequality and discrimination. This report contributes to national efforts to understand and change attitudes, beliefs and behaviors that can lead to stigma and discrimination. Changing stigma in a lasting way will require coordinated efforts, which are based on the best possible evidence, supported at the national level with multiyear funding, and planned and implemented by an effective coalition of representative stakeholders. *Ending Discrimination Against People with Mental and Substance Use Disorders: The Evidence for Stigma Change* explores stigma and discrimination faced by individuals with mental or substance use disorders and recommends effective strategies for reducing stigma and encouraging people to seek treatment and other supportive services. It offers a set of conclusions and recommendations about successful stigma change strategies and the research needed to inform and evaluate these efforts in the United States.

Teen Health - Mary Helen Bronson 2009

Middle school health textbook for schools where health is taught at more than one grade level, featuring self-contained, 4- to 6-page lessons.

Communities in Action - National Academies of Sciences, Engineering, and Medicine 2017-04-27

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of

health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Teen Health Course 3, Modules, Healthy Relationships and Sexuality - McGraw-Hill Education 2002-06-04

Contains 9 lessons for students to learn critical life skills relating to understanding their bodies and sexuality by providing factual basic information, covering topics such as dating, male and female reproductive systems, marriage, parenthood, pregnancy, childbirth, sexually transmitted diseases, and reinforces the choice of abstinence.

Adolescent Health Services - Institute of Medicine 2009-01-03

Adolescence is a time of major transition, however, health care services in the United States today are not designed to help young people develop healthy routines, behaviors, and relationships that they can carry into their adult lives. While most adolescents at this stage of life are thriving, many of them have difficulty gaining access to necessary services; other engage in risky behaviors that can jeopardize their health during these formative years and also contribute to poor health outcomes in adulthood. Missed opportunities for disease prevention and health promotion are two major problematic features of our nation's health services system for adolescents. Recognizing that health care providers play an important role in fostering healthy behaviors among adolescents, *Adolescent Health Services* examines the health status of adolescents and reviews the separate and uncoordinated programs and services delivered in multiple public and private health care settings. The book provides guidance to administrators in public and private health care agencies, health care workers, guidance counselors, parents, school administrators, and policy makers on investing in, strengthening, and improving an integrated health system for adolescents. Hearings, Reports and Prints of the Senate Committee on Government Operations - United States. Congress. Senate. Committee on Government Operations 1966

The Promise of Adolescence - National Academies of Sciences, Engineering, and Medicine 2019-08-26

Adolescence "beginning with the onset of puberty and ending in the mid-20s" is a critical period of development during which key areas of the brain mature and develop. These changes in brain structure, function, and connectivity mark adolescence as a period of opportunity to discover new vistas, to form relationships with peers and adults, and to explore one's developing identity. It is also a period of resilience that can ameliorate childhood setbacks and set the stage for a thriving trajectory over the life course. Because adolescents comprise nearly one-fourth of the entire U.S. population, the nation needs policies and practices that will better leverage these developmental opportunities to harness the promise of

adolescence"rather than focusing myopically on containing its risks. This report examines the neurobiological and socio-behavioral science of adolescent development and outlines how this knowledge can be applied, both to promote adolescent well-being, resilience, and development, and to rectify structural barriers and inequalities in opportunity, enabling all adolescents to flourish.

The Advocate - 2001-08-14

The Advocate is a lesbian, gay, bisexual, transgender (LGBT) monthly newsmagazine. Established in 1967, it is the oldest continuing LGBT publication in the United States.
