Sex Drive - Bella Ellwood-Clayton 2012-03-01
When it comes to women's priorities, is sex on top? Lack of libido is women's most common sexual problem and once in a secure relationship, women's sex drive begins to plummet. Exploring what our libido is and why it is being depleted, sexual anthropologist Dr Bella Ellwood-Clayton argues that women don't want sex because they don't feel sexy. At a time when women's libidos are being threatened by the wider forces of media, marketing and medication and our increasingly pressured lives, who can blame them? With increasing numbers of women with low libido being diagnosed as 'sexually dysfunctional', the race to create a 'pink Viagra' is on. But do we have unrealistic expectations about our sex drive? Who defines what is normal and abnormal? And could 'low libido' in fact be the natural order of things? Provocative, authoritative and engaging, *Sex Drive: In pursuit of female desire* is both fascinating reading and

a book that is creating passionate debate.

Levitra - Nebay Michael 2018-11-13

Guide On the Male Enhancement Supplement for Improving Sex Drive and Increasing Libido Vardenafil, which the world also known by the brand name called Levitra, is a prescription medicine that helps to treats male erectile dysfunction. Erectile dysfunction is whilst a man is not able to get or preserve an erection. It normally takes place due to the fact that the arteries that bring the blood to the penis are too narrow. Vardenafil help to increase blood glide

or flow to the penis. Its work is much like that of sildenafil, or Viagra, however Viagra lasts between 2 and 4 hours, while Levitra lasts 4 hours. In the course of a penile erection, the penis is filled with blood. The blood vessels that supply the penis with blood increase, or dilate, and the vessels that take blood away from the penis contract. The two large chambers in the penis, called the Corpus Cavernosa, fill with blood. As the blood accumulates in the penis, an erection is the end result. Vardenafil belongs to a category of medication referred to as phosphodiesterase type-5 (PDE5) inhibitors. A PDE5 inhibitor stops PDE5 from constricting the arteries. By relaxing the arteries, vardenafil help to increase the blood flow when a man is sexually aroused. The active ingredient works at the chain of reactions in the penis at some point of arousal. Whilst a male is sexually aroused, nitric oxide is released into his penis, and this triggers a sequence of reactions. This make an enzyme, guanylate cyclase, to produce cyclic guanosine monophosphate (cGMP). cGMP regulates the contraction and dilation, or enlargement, of blood vessels that carry blood to and from the penis. The chemical reaction causes the vessels that supply the penis to dilate, at the same time as the ones disposing blood from the penis contract.

Phosphodiesterase-5 (PDE5), another enzyme breaks down or destroys cGMP. Whilst cGMP is destroyed, the blood vessels go back to their normal size, successfully ending the erection. Vardenafil help to stops PDE5 from destroying cGMP. On this note, it permits cGMP to work for a longer period of time. On the other note, it helps to prolong an erection.

Aphrodite - Stig öberg 2013-05-22

This book is solely devoted to natural methods to increase sex drive, sexual arousal and libido, both in males and females, using natural substances, which are generally called by the name Aphrodisiac. Sexual dysfunction is extremely common among both males and females. According to World famous sex researchers, Masters and Johnson, during sexual intercourse men took around 4 minutes to reach orgasm with their partners, but women took about 10-20 minutes to reach orgasm with their partners, but only about 4 minutes to reach orgasm, when they masturbated. So it is not very difficult to guess from these figures, why anorgasmia is much more common among women than among males. Some 10% of women have never got orgasm, over 15% report difficulties of getting orgasm, and 40-50% of women have complaints about sexual dissatisfaction or becoming sexually aroused. At least 70-80% of women can get orgasm only through clitoris stimulation, but possibly at least 90% of their male partners do not know this fact or do not care about it. As is well known, clitoris stimulation is almost impossible with the most common sexual intercourse position, the Missionary position. Because women reach orgasm less often during sexual intercourse than

males, they are more likely than men to have and show a fake orgasm. At least 150 million men in the World suffer from erectile dysfunction. The figure is between 10-20% in younger males but can reach over 50% at ages over 60. But premature ejaculation is much more common than erectile dysfunction. According to Masters and Johnson, up to 20% of men suffer from premature ejaculation, so they get orgasm within a very short time period during sexual intercourse and their female partner does not have any possibility of getting sexual pleasure or orgasm. Sexual dysfunction increases rapidly during aging, both among males and females, mostly due to hormonal reasons. Menopause in females decreases strongly sexual activity, due to decreasing Estrogen, DHEA and Testosterone. In males Testosterone and DHEA decrease steadily during aging, but the catabolic, "Anti-sex" hormones Cortisol and Prolactin tend to increase. There exists astonishing number of simple and very common natural products, which increase sex drive, sexual arousal, libido, erection, Testosterone, sperm count and sperm motility. This book shows over 300 plants, food items, nutrients and methods, which by research have been shown to increase sexual performance, libido, sexual arousal, Testosterone, erection, orgasm, sperm count and sperm motility, and to decrease high Cortisol and Prolactin. Together with Ethnobotanical research studies, this book shows over 600 plants and products, which are used as aphrodisiacs all over the World. This book is based strictly on scientific experiments with humans and animals, and there are totally several hundreds of research study references, which can be seen on the Reference pages at the end of the book.

used groundbreaking science and research to prove that the most important factor in creating and sustaining a sex life filled with confidence and joy is not what the parts are or how they're organized but how you feel about them. In the years since the book's initial publication, countless women have learned through Nagoski's accessible and informative guide that things like stress, mood, trust, and body image are not peripheral factors in a woman's sexual wellbeing; they are central to it—and that even if you don't always feel like it, you are already sexually whole by just being yourself. This revised and updated edition continues that mission with new information and advanced research, demystifying and decoding the science of sex so that everyone can create a better sex life and discover more pleasure than you ever thought possible.
