No Dig, No Fly, No Go - Mark Monmonier 2010-05-15

Some maps help us find our way; others restrict where we go and what we do. These maps control behavior, regulating activities from flying to fishing, prohibiting students from one part of town from being schooled on the other, and banishing certain individuals and industries to the periphery. This restrictive cartography has boomed in recent decades as governments seek regulate activities as diverse as hiking, building a residence, opening a store, locating a chemical plant, or painting your house anything but regulation colors. It is this aspect of mapping—its power to prohibit—that celebrated geographer Mark Monmonier tackles in *No Dig, No Fly, No Go*. Rooted in ancient Egypt's need to reestablish property boundaries following the annual retreat of the Nile's floodwaters, restrictive mapping has been indispensable in settling the American West, claiming slices of Antarctica, protecting fragile ocean fisheries, and keeping sex offenders away from playgrounds. But it has also been used for opprobrium: during one of the darkest moments in

American history, cartographic exclusion orders helped send thousands of Japanese Americans to remote detention camps. Tracing the power of prohibitive mapping at multiple levels—from regional to international—and multiple dimensions—from property to cyberspace—Monmonier demonstrates how much boundaries influence our experience—from homeownership and voting to taxation and airline travel. A worthy successor to his critically acclaimed *How to Lie with Maps*, the book is replete with all of the hallmarks of a Monmonier classic, including the wry observations and witty humor. In the end, Monmonier looks far beyond the lines on the page to observe that mapped boundaries, however persuasive their appearance, are not always as permanent and impermeable as their cartographic lines might suggest. Written for anyone who votes, owns a home, or aspires to be an informed citizen, *No Dig, No Fly, No Go* will change the way we look at maps forever.

Handbook of Public Protection - Mike Nash 2010-09-27

Public protection has become an increasingly central theme in the work of the criminal justice agencies in many parts of the world in recent years. Its high public profile and consequent political sensitivity means that growing numbers of criminal justice professionals find their daily work load dominated by the assessment and management of high risk of harm offenders. Developments such as sex offender registers and (in the UK) Multi Agency Public Protection Arrangements (Mappa) have made this issue not only a core activity for police, probation and prison services, but to a range of other organizations as well, in particular social work and the health services. Partnership has become central to the concept of public protection. At the same time the concept of public protection has occasioned increased political debate. Protecting the public from high risk or dangerous offenders has become an

international issue and has increasingly shaped criminal justice policy. This text brings together leading authorities in the field, providing authoritative coverage of the theory and practice of public protection, both in the UK and internationally. It provides a critical review of contemporary public protection practice as well as up-to-date research and thinking in the field.

Spying with Maps - Mark Monmonier 2004-04

Maps, as we know, help us find our way around. But they're also powerful tools for someone hoping to find you. Widely available in electronic and paper formats, maps offer revealing insights into our movements and activities, even our likes and dislikes. In *Spying with*

Maps, the "mapmatician" Mark Monmonier looks at the increased use of geographic data, satellite imagery, and location tracking across a wide range of fields such as military intelligence, law enforcement, market research, and traffic engineering. Could these diverse forms of geographic monitoring, he asks, lead to grave consequences for society? To assess this very real threat, he explains how geospatial technology works, what it can reveal, who uses it, and to what effect. Despite our apprehension about surveillance technology, *Spying with Maps* is not a jeremiad, crammed with dire warnings about eyes in the sky and invasive tracking. Monmonier's approach encompasses both skepticism and the acknowledgment that geospatial technology brings with it unprecedented benefits to governments, institutions, and individuals, especially in an era of asymmetric warfare and bioterrorism. Monmonier frames his explanations of what this new technology is and how it works with the question of whether locational privacy is a fundamental right. Does the right to be left alone include not letting Big Brother (or a legion of Little Brothers) know where we are or where we've been? What sacrifices must we make for homeland security and open government? With his usual wit and clarity, Monmonier offers readers an engaging, even-handed introduction to the dark side of the new technology that surrounds us—from traffic cameras and weather satellites to personal GPS devices and wireless communications.

The Ethics of Total Confinement - Bruce A. Arrigo 2011-06-29

In three parts, this volume in the AP-LS series explores the phenomena of captivity and risk management, guided and informed by the theory, method, and policy of psychological jurisprudence. The authors present a controversial thesis that demonstrates how the forces of captivity and risk management are sustained by several interdependent "conditions of control." These conditions impose barriers to justice and set limits on citizenship for one and all. Situated at the nexus of political/social theory, mental health law and jurisprudential ethics, the book examines and critiques constructs such as offenders and victims; self and society;

therapeutic and restorative; health; harm; and community. So, too, are three "total confinement" case law data sets on which this analysis is based. The volume stands alone in its efforts to systematically "diagnose" the moral reasoning lodged within prevailing judicial opinions that sustain captivity and risk management practices impacting: (1) the rights of juveniles found competent to stand criminal trial, the mentally ill placed in long-term disciplinary isolation, and sex offenders subjected to civil detention and community re-entry monitoring; (2) the often unmet needs of victims; and (3) the demands of an ordered society. Carefully balancing sophisticated insights with concrete and cutting-edge applications, the book concludes with a series of provocative, yet practical, recommendations for future research and meaningful reform within institutional practice, programming, and policy. The Ethics of Total Confinement is a thought-provoking and timely must-read for anyone interested in the ethical and legal issues regarding madness, citizenship, and social justice. "It has become clear that there is no criminological exit from embrace of degrading punishments and practices to which our increasingly distorted risk perception commits us. Instead, the path forward must run through a return to the ethical and psychological roots of security and justice. The Ethics of Total Confinement is a quantum step forward in defining and advancing that path."--Jonathan Simon, Adrian A. Krage Professor of Law, Jurisprudence and Social Policy Program, UC Berkeley School of Law "This book boldly calls for a total transformation in the way the law deals with people who are confined because of their perceived depravity or dangerousness. It focuses on three outcast groups--juveniles tried as adults, people with mental illness subjected to hospitalization, and sex offenders committed as dangerous--and, based on an innovative analysis of the relevant caselaw and empirics, shows why current practices not only visit substantial harm on these people but also brutalize those who deprive them of liberty and damage the rest of us by feeding our basest, most uninformed fears. Relying on Aristotelian philosophy, therapeutic and restorative principles, and commonsense justice, the book persuasively argues that we must reorient the training and thinking of all

major players in the system if our goal is to promote the maximum amount of human flourishing."--Christopher Slobogin, Milton Underwood Professor of Law, Vanderbilt University Law School "The Ethics of Total Confinement: A Critique of Madness, Citizenship, and Social Justice deepens our understanding of how our legal system justifies its treatment of those it confines. By bridging gaps among relevant disciplines, the book clarifies to an interdisciplinary audience just how inadequate those justifications turn out to be when measured by psychological, ethical, or justice-based standards. The book's provocative conclusions and recommendations offer much food for thought and suggest potential directions for action."--Dennis Fox, Emeritus Associate Professor of Legal Studies and Psychology, University of Illinois at Springfield "The Ethics of Total Confinement shows how captivity diminishes the keepers and the kept. It is a book that synthesises in creative new ways reformist visions of justice, virtue and the cultivation of habits of character. This is profound work that opens new paths to dignity, healing and social justice."--John Braithwaite, Australian Research Council Federation Fellow, Australian National University "The Ethics of Total Confinement offers a useful and wide-ranging perspective grounded in psychological jurisprudence. With its emphasis on the harm done to those most vulnerable to extremes of risk-management, this volume makes a welcome addition to the literature on confinement."--Lorna Rhodes, Professor, Department of Anthropology, University of Washington "The provocative thesis of this book develops psychological jurisprudence to conceptualize the ethics of existing total confinement practices, aspiring to greater justice and human flourishing for all. A timely intervention of this kind is most welcome."--George Pavlich, Associate Vice-President (Research), Professor of Law and Sociology, University of Alberta

Maps and the Internet - M.P. Peterson 2005-12-17

This book examines a new trend affecting cartography and geographic information science. Presenting the work of over 30 authors from 16 different countries, the book provides an overview of current research in the new area of Internet Cartography. Chapters deal with the growth of

this form of map distribution, uses in education, privacy issues, and technical aspects from the point of view of the map provider - including Internet protocols such as XML and SVG. Many see the Internet as a revolution for cartography. Previously tied to the medium of paper and expensive large-format color print technology, maps had a limited distribution and use. The Internet made it possible to not only distribute maps to a much larger audience but also to incorporate interaction and animation in the display. Maps have also become timelier with some maps of traffic and weather being updated every few minutes. In addition, it is now possible to access maps from servers throughout the world. Finally, the Internet has made historic maps available for viewing to the public that were previously only available in map libraries with limited access. * Provides comprehensive coverage of maps and the internet * Delivers a global perspective * Combines theoretical and practical aspects
