Ornithology in Laboratory and Field - Olin Sewall Pettingill 2013-10-02

Ornithology in Laboratory and Field is intended as an aid to ornithological study at the college or university level. Students who lack the background knowledge usually acquired during a course in general zoology or biology should keep it handy for ready reference a standard elementary text on the subject. This book contains extensive material for purely informational reading, possibly enough to supplant the need of an additional textbook. Its

principal purpose still complies with the title of its predecessors for it is essentially a manual to guide and assist the student in direct observations. All twenty sections, except the last ("The Origin, Evolution, and Decrease of Birds"), suggest methods and provide instructions for studies; and all conclude with an extensive list of references, frequently annotated, for further information. The twenty sections of the book can be taken up in almost any order and some may be omitted without affecting the instructional value of the others. A

feature of this new edition is an introduction to birds and ornithology, intended for reading at the beginning of a course. The purpose is twofold: to show the significance of birds for study and to give an overall preview of ornithology, the subject, with emphasis on its wide scope, how it is studied, and some of the continuing and exciting opportunities that it offers for investigation.

Current Ornithology - Richard Johnston
2012-12-06

If it is still true that more than 80% of the ornithologists in North America are primarily interested or engaged in ecological studies on birds (J. R. King and W. J. Bock, Final Report of the Workshop on a National Plan For Ornithology, 1978), then Volume 3 of Current Ornithology is preadapted for their consideration. All but one article in this volume are somehow concerned with the ecological aspects of the biology of birds. Variation in the scope of topical coverage is relatively broad, and

includes conservation, reproduction, behavior, community structure, and evolutionary ecology. Three reviews concern the pervasive effects of man and industry on various bird populations of the world. Risebrough provides a detailed description of the relationships between pesticides and bird populations. Morrison assesses aspects of bird population numbers as indicators of environmental change, and Temple outlines current research on endangered species. The broad spectrum of reproductive ecology of birds is variously treated in this volume. Jehl and Murray explore sexual selection and some of the resulting complexities in the evolution of sexual size dimorphism, primarily in shorebirds. Lawton and Lawton are concerned with the relationships between social behavior and breeding systems in which variation is found in the age at which reproduction is first undertaken. Oring examines the wide-ranging variation in polyandrous breeding systems in birds, while Rohwer is

concerned with adoption versus infanticide in birds, and their relationships to reproductive fitness.

California Wildlife and Their Habitats - 1980

Relationships between wildlife and their habitats are examined in a series of matrixes, species narratives, and distribution maps.

Literature on Wildlife Research in the Madrean Archipelago, 1800s-1994 - 1997

New England Wildlife - Richard M. DeGraaf 1986

Nesting Birds of a Tropical Frontier -

Timothy Brush 2005

The story behind the birds everyone wants to see Halfway between Dallas and Mexico City, along the last few hundred miles of the Rio Grande, lies a subtropical outpost where people come from all over the world to see birds. Located between the temperate north and the tropic south, with desert to the west and ocean to the east, the Lower Rio Grande Valley of Texas provides habitat for a variety of birds seen nowhere else in the United States. If you want to see a Hooked-billed Kite, Muscovy Duck, or Altamira Oriole, this is the place. Drawing on years of personal observation and study, Timothy Brush has written a classic work of natural history about the little-known breeding bird communities of the Valley and the diversity of nesting strategies and behaviors that can be seen. Brush estimates that there are more than 150 current breeding species in the Lower Rio Grande Valley. In "Nesting Birds of a Tropical

Frontier, "he describes the habits, distribution, changes in occurrence, and general outlook of these as well as former breeders, concentrating on Valley specialties and other birds of particular interest in the Valley. The species are all dependent upon appropriate habitat, from riparian forest to mesquite savannah, and Brush describes the history of these habitats and the special features that keep the birds coming. He also discusses conservation and the need for both large-scale land acquisitions by public and private groups and small-scale restoration through urban parks and individual landscaping. Art by Gerald Sneed and color photographs by several of Texas' top nature photographers show off some of the Valley's famous birds. Historical maps of vegetation and geology help us gain a better perspective on the changes that have taken place along the Rio Grande and on the breeding bird communities of the U.S.-Mexico frontier.

Readings in Zoosemiotics - Timo Maran

2012-01-01

The book is the first annotated reader to focus specifically on the discipline of zoosemiotics. Zoosemiotics can be defined today as the study of signification, communication and representation within and across animal species. The name for the field was proposed in 1963 by the American semiotician Thomas A. Sebeok. He also established the framework for the paradigm by finding and tightening connections to predecessors, describing terminology, developing methodology and setting directions for possible future studies. The volume includes a wide selection of original texts accompanied by editorial introductions. An extensive opening introduction discusses the place of zoosemiotics among other sciences as well as its inner dimensions; the understanding of the concept of communication in zoosemiotics, the heritage of biologist Jakob v. Uexküll; contemporary developments in zoosemiotics and other issues. Chapter introductions discuss the background of

the authors and selected texts, as well as other relevant texts. The selected texts cover a wide range of topics, such as semiotic constitution of nature, cognitive capabilities of animals, typology of animal expression and many other issues. The roots of zoosemiotics can be traced back to the works of David Hume and John Locke. Great emphasis is placed on the heritage of Thomas A. Sebeok, and a total of four of his essays are included. The Reader also includes influential studies in animal communication (honey bee dance language, vervet monkey alarm calls) as well as theory elaborations by Gregory Bateson and others. The reader concludes with a section dedicated to contemporary research. Readings in Zoosemiotics is intended as a primary source of information about zoosemiotics, and also provides additional readings for students of cognitive ethology and animal communication studies.

Communication and Relationships in the Genus Tyrannus - William John Smith 1966

Birds of the Rocky Mountains - Paul A. Johnsgard 1992-03-01

"This comprehensive reference work . . . describes in detail 354 species found in a 353,000 square mile area, from the 40th parallel in Colorado north to the 52nd parallel in Canada; from the western border of Idaho to the eastern boundaries of Montana and Wyoming. . . . Here a visitor to any of the major national parks in the Rocky Mountain region can have quick access to the abundance and seasonality of a given species. In addition, a comprehensive introduction describes the predominant life zones of the region, and over a dozen maps illustrate such significant features as precipitation patterns, vegetation community types, and major physiographic provinces. The

book is well written and an essential guide for the birder who visits the Rockies."?Indiana Audubon Quarterly Birds as common as the bobwhite and blue-winged teal and as rarely seen as the great egret are featured in Paul A. Johnsgard's informative book, profusely illustrated with drawings and color plates.

Current Ornithology - D.M. Power 2013-06-29
Contributors to this volume offer new research on extinction processes in birds, nest predation, and song systems, and describes a graphical model that helps predict the reproductive consequences of time allocation between the competing demands of guarding young birds and foraging for food. Current Ornithology is the only English-language publication currently devoted exclusively to extensive reviews and synthesis of topics pertaining to all aspects of the biology of birds. Chapters fall under such diverse rubrics as ecology, evolution, behavior, phylogeny, behavioral ecology, anatomy and physiology, and conservation biology. All authors

are leading authorities on their subjects, and each chapter is refereed by experts in the topics covered. Although all chapters focus primarily on birds, some topics, such as the social cognition of birds as compared to primates (Volume 13), have significant application to disciplines outside of ornithology. Current Ornithology aims to provide an accessible, up-to-date, accurate source of data and to contribute to conceptual generalization and unification across the biological sciences.

The Behavior of Communicating - William
John. Smith 2009-06-30

In this book, W. John Smith enlarges ethology's perspective on communication and takes it in new directions. Traditionally, ethological analysis has focused on the motivational states of displaying animals: What makes the bird sing, the cat lash its tail, the bee dance? *The Behavior of Communicating* emphasizes messages. It seeks to answer questions about the information shared by animals through their displays: What information is made available to a bird by its neighbor's song, to a cat by its opponent's gesture, to a bee by its hivemate's dancing? What information is extracted from sources contextual to these displays? How are the responses to displays adaptive for recipients and senders? What evolutionary processes and constraints underlie observed patterns of animal

communication? Smith's approach is deeply rooted in the ethological tradition of naturalistic observations. Detailed analysis of observed displays and display repertoires illuminates the theoretical discussion that forms the core of the book. A taxonomy and interpretative analysis of messages made available through formalized display behavior are also developed. Smith shows that virtually all subhuman animal displays may be interpreted as transmitting messages about the communicator--not the environment--and, more specifically, that messages indicate the kinds of behavior the displaying animal may choose to perform. The most widespread behavioral messages are surprisingly general, even banal, in character; yet they make public information that is not readily available from other sources and that would otherwise be essentially private to the communicator. Taken along with information from sources contextual to the displays, the messages made available may permit responses

that are markedly specific. By taking advantage of contextual specificity, a species expands the capacity of its display behavior to be functional in numerous and diverse circumstances. After developing the concept of messages and discussing their forms, the responses made to them, and the functions engendered, Smith turns to the evolution of display behavior--the ways in which acts become specialized for communication and the nature of the evolutionary constraints affecting the ultimate

forms of displays. He revises the traditional ethological concept of displays, and in a final chapter develops the further concept of formalized interactions. Here he extends the discussion to formal patterns of behavior that, unlike displays, are beyond the capabilities of individual performers. Human nonverbal communication, which is considered from time to time throughout the book, provides the richest examples of communication flexibly structured at this level of complexity.
