

Determinants Of The Nurse Patient Relationship

Selected factors affecting nurse-perceived reciprocity in nurse-patient relationships - Elnora Prihoda Mendias 1995

Factors Influencing Communication in Nurse-patient Relationships - Barry D. Cohen 1975

Nursing as a Therapeutic Activity - Steven J Ersser
2018-12-24

First published in 1997, this volume responds to the rapidly developing fields of nursing and health care fields and explores the meaning of nursing and the nurse-patient relationship through looking at the effects of a nurse's personality, approach and understanding as being therapeutic for the patient's experience. Steven J. Ersser explores areas including the

concept of nursing as therapy, the presence of nurses and the effect of nursing on patient outcome. His book is part of a new series of monographs offering up-to-date reports of recently completed research projects in the fields of nursing and health care. The aim of the series is to report studies that have relevance to contemporary nursing and health care practice. It will include reports of research into aspects of clinical nursing care, management and education. This book, along with the series, will be of interest to all nurses and health care workers, researchers, managers and educators in the field.

Nurse-patient Communication - Garland K. Lewis 1973

*The Future of Nursing
2020-2030* - National
Academies of Sciences
Engineering and Medicine
2021-09-30

The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy.

Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. *The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity* explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This

work builds on the foundation set out by The Future of Nursing: Leading Change, Advancing Health (2011) report.

[A Literature Review of Factors Affecting Effective Communication in the Nurse Patient Relationship in an Acute Care Environment](#) - Joan Johnson 2006

Communication Skills in Nursing Practice - Lucy Webb 2019-11-25

Written specifically for student nurses developing their communication and interpersonal skills in any field of nursing. The book addresses all the competencies for communication skills outlined in the 2018 NMC standards and features insightful contributions from experienced nurses and healthcare leaders across different clinical fields. As communication and interpersonal skills have become essential to modern nursing, this book will focus on demonstrating how the theory behind these skills can be successfully applied in

practice. Helping students to become confident, assured communicators when interacting with patients, whilst on placement and into their post-registration nursing career. The new edition includes the following updates:

- A new chapter on person-centred care and intercultural communication.
- Further content on modern forms of communication such as social media and other new technologies.
- A new theme 'Emotional intelligence' integrated throughout the book.

An Analysis of the Bargaining Factors in the Nurse Patient Relationship Utilizing Social Exchange Theory - Jean Margaret Scheideman 1969

How the Nurse-patient Relationship Impacts Patient Empowerment -

Barbara A. Mott 2014

Background - The transition to motherhood is associated with increased anxiety, maternal depression, and maternal stress, which threaten the mother's confidence, negatively

impacting mother-infant bonding and maternal empowerment. There are no studies which tested Swanson's Theory of Caring in evaluating the relationship between the nurse caring behaviors and first-time mother's maternal confidence. Objective - Identify predictors of maternal confidence and measure the relationship between nurse caring behaviors, selected maternal factors, and maternal confidence. Methods - In a convenience sample, 104 first-time mothers were recruited from prenatal education classes and hospital tours of two participating hospitals within the Mid-Atlantic region. In addition, snowball sampling was utilized. Survey instruments were completed by the first-time mothers 1-2 weeks postpartum. Analyses of descriptive statistics, multiple regressions, and ANOVAs were conducted to determine the relationship between nurse caring behaviors, selected maternal factors (postpartum stress, lack of social support, depression, and infant

temperament), and maternal confidence. Results - This study supports Swanson's Theory of Caring. Nurses caring behaviors had a weak to moderate relationship $r = .253$, p

The Neuman Systems Model - Betty M. Neuman 1989

Determinants of the nurse-patient relationship - Gertrud Ujhely 1968

Negotiating Partnerships with Older People - Brendan McCormack 2017-07-12

This title was first published in 2001. Much discussion takes place concerning the nature of the relationship between nurses and older people in hospital and there have been many concerns expresses in United Kingdom policy documents about the quality of care for older people in hospitals. Autonomy is considered to be one of the central ethical principles of health care practice and as such is a significantly relevant concept for nurses. This book presents the results of a study

undertaken with nurses who work with older people in hospitals. Issues arising from the study include the effects of institutional constraints on autonomy. A framework for person-centred practice has been developed from this work that emphasizes the values of the individual and their needs, wants and desires. The role of the nurse in facilitating practice that respects an individual's values is outlined, and the importance of nurses in negotiating relationships with older people is also emphasized.

Code of Ethics for Nurses with Interpretive Statements - American Nurses Association 2001

Pamphlet is a succinct statement of the ethical obligations and duties of individuals who enter the nursing profession, the profession's nonnegotiable ethical standard, and an expression of nursing's own understanding of its commitment to society. Provides a framework for nurses to use in ethical

analysis and decision-making. *Patient Safety and Quality* - Ronda Hughes 2008

"Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)." - online AHRQ blurb,

The Development of Nurse-patient Relationship Scales in Chronic Care - Veronique Boscart 2010

Quality of life and well-being of patients living in chronic care (CC) are determined to a considerable extent by the relationships these patients have with nursing personnel caring for them. Given the importance of these relationships, there is an absence of empirical research and measurement tools to assess these relationships from a patient's perspective. The purpose of this study was to develop and test valid and reliable instruments to determine what qualities of the humanistic relationships between cognitively competent patients and nursing personnel in CC settings were most important to patients and what they experience most. A conceptual framework based on the Humanistic Nursing Theory by Paterson and Zderad (1976) served as a foundation to develop two scales; the Humanistic Relationship Importance Scale (HRIS) assessed what attributes of the relationship are most important, and the Humanistic Relationship Experience Scale

(HRES) assessed what attributes of the relationship are experienced. Sixty-nine content relevant items based on six dimensions of the Paterson and Zderad theory were developed and tested for content validity resulting in the deletion of 20 items. Forty patients completed the now 49-item scales to establish their initial internal consistency reliability, test-retest reliability and construct validity. Another 25 items were deleted in the process. The 24-item scales were completed by 249 patients in five CC facilities and the results subjected to a principal axis analysis (PAA). An oblique rotation resulted in a five factor solution labeled: relational availability, promoting quality of daily life, recognizing and supporting choice, forming connections, and supporting human uniqueness. This was a simplification of the original six dimensions of the Paterson and Zderad theory. A PAA of the 24-item HRES resulted in a one factor solution labeled humanistic connection.

Reliability testing of the factors resulted in the deletion of one more item and an HRIS with a Cronbach's alpha of .87 indicating strong internal reliability and an HRES with a Cronbach's alpha of .98 suggesting some redundancy of items. Relational availability was rated as the most important factor in the nurse-patient relationship although all factors were important to patients. The mean score of the HRES indicated that patients experience a moderate level of humanistic connection in terms of frequency and intensity with nurses who generally care for them. Findings of this study have contributed to a better understanding of the nurse-patient relationship, and support the care, research, and theoretical knowledge of nurses and patients in these environments.

Determinants of the Nurse-Patient Relationship - Gertrud Bertrand Ujhely
2013-11-21

The Development of Nurse-patient Relationship Scales

in Chronic Care - 2006

Quality of life and well-being of patients living in chronic care (CC) are determined to a considerable extent by the relationships these patients have with nursing personnel caring for them. Given the importance of these relationships, there is an absence of empirical research and measurement tools to assess these relationships from a patient's perspective. The purpose of this study was to develop and test valid and reliable instruments to determine what qualities of the humanistic relationships between cognitively competent patients and nursing personnel in CC settings were most important to patients and what they experience most. A conceptual framework based on the Humanistic Nursing Theory by Paterson and Zderad (1976) served as a foundation to develop two scales; the Humanistic Relationship Importance Scale (HRIS) assessed what attributes of the relationship are most important, and the Humanistic

Relationship Experience Scale (HRES) assessed what attributes of the relationship are experienced. Sixty-nine content relevant items based on six dimensions of the Paterson and Zderad theory were developed and tested for content validity resulting in the deletion of 20 items. Forty patients completed the now 49-item scales to establish their initial internal consistency reliability, test-retest reliability and construct validity. Another 25 items were deleted in the process. The 24-item scales were completed by 249 patients in five CC facilities and the results subjected to a iii principal axis analysis (PAA). An oblique rotation resulted in a five factor solution labeled: relational availability, promoting quality of daily life, recognizing and supporting choice, forming connections, and supporting human uniqueness. This was a simplification of the original six dimensions of the Paterson and Zderad theory. A PAA of the 24-item HRES resulted in a one factor solution labeled

humanistic connection.

Reliability testing of the factors resulted in the deletion of one more i.

Interpersonal Relations In Nursing - Hildegard E. Peplau, RN 1991-06-20

Originally published in 1952 by a towering figure in nursing history, this book stresses the then novel theory of interpersonal relations as it was relevant to the work of nurses. Her framework suggested that interaction phenomena that occur during patient-nurse relationships have qualitative impact on patient outcomes. While the past four decades have seen a substantial expansion in the use and understanding of interpersonal theory, such as cognitive development and general systems theory, this classic book remains a useful foundation for all nurses as so much subsequent work used this work as its starting point. Springer Publishing Company is delighted to make this book available again.

Therapeutic goals and challenges of meeting the

unmet care needs of a patient - Timothy John Whittard 2019-06-17
Essay from the year 2008 in the subject Psychology - Consulting, Therapy, University of the West of England, Bristol, course: Mental Health Nursing, language: English, abstract: This essay aims to identify, explore and discuss the therapeutic goals of working with a patient I encountered

during past clinical practice, and the challenges associated in meeting the goals and needs of the patient; this is achieved through reflection and the consideration of the behaviour of the patient, the responses of the nursing team, and a plethora of other factors inherent within the healthcare service itself.
