Dads Make the Best Friends Abigail Wilentz 2006-04 Just as "Moms make the Best Friends" celebrates the mother and daughter bond, his second book in the series evokes the essence of the father-daughter relationship with moments and memories from "He let you buy both flavours of ice cream when you couldn't decide," to "He helped you through that nasty year of geometry homework" to "He taught you the finer points of mini golf," gain all whimsically illustrated by Amy Schimler. Like "Moms Make the Best Friends" it obviously will not describe every reader's specific experience but will speak to the spirit of this special bond, and readers will certainly recognize here elements of themselves and their own fathers.

Spoil Island Charlie Hailey 2013-08-01 Spoil islands are overlooked places combining dirt with paradise, waste-land with “brave new world,” and wildness with human intervention. Mundane products of dredging, these islands form an uninvestigated archipelago that demonstrates the potential value and contested re-valuation of landscapes of waste. Research navigates the U.S. east coast from New York City to Key West, examines these marginalized topographies to understand emergent concerns of 21st-century placemaking, public space, and infrastructure, and discovers that spoil islands constitute an unprecedented public commons, where human agency and nature are inextricably linked.

Gardens of Madeira—Gardens of the World Beata Elżbieta Cieszyńska 2020-05-15 The volume Gardens of Madeira - Gardens of the World. Contemporary Approaches displays present tendencies in calling upon the idea of gardens, being a wide-range approach to their literary, sociological and

cultural representations. The book`s four parts: “Madeira: A Garden in the Sea?”, “Gardens as Temporal and Spatial Category. Cultural and Literary Approaches”, “Gardens as an Expression. Socio-cultural Perspectives” and “Re-Creating the Archetypal Garden - Discourses and Practices” refer to vast geographical and cultural areas, starting with the very complex sample of the overseas-yet-European Island of Madeira, and then joining the exemplification material from historical and contemporary European communities (with some luso-centric accents), including examples from the less known Slavonic and Eastern European countries. Those European issues are confronted with various non-European societies such as from Africa, Asia, and both Americas. Gardens evoke and express in many ways the present human condition, and - as such a process goes on - this book provides proposals for patterns to connect them to the modern and post-modern rules of self defining, reading the Other, interpreting world/national/cultural literatures, as well as to the various attempts to introduce the idea of gardens into the basic spatial and temporal aspects of contemporary communities. It also demonstrates the theoretical and practical attempts to project our “gardens` dependence” on to one of the essentials for contemporary societies which are multicultural, urbanised, technologically equipped and dependent, but which still are keen on reading and constructing paradises as environmental and cultural spaces for both asylum and encounter. The huge advantage of the book is showing to scholars and the wider public how discourses from the past meet with the quests of both the Humanities and the Sciences for gardening inspirations, not only for the sake of the today`s societies, but also when projecting the future of the Earth.

Fractions, Tilings, and Geometry Bowen Kerins 2018-01-25 Designed for precollege teachers by a collaborative of teachers, educators, and mathematicians, *Fractions, Tilings, and Geometry* is based on a course offered in the Summer School Teacher Program at the Park City Mathematics Institute. The overall goal of the course is an introduction to non-periodic tilings in two dimensions and space-filling polyhedra. While the course does not address quasicrystals, it provides the underlying mathematics that is used in their study. Because of this goal, the course explores Penrose tilings, the irrationality of the golden ratio, the connections between tessellations and packing problems, and Voronoi diagrams in 2 and 3 dimensions. These topics all connect to precollege mathematics, either as core ideas (irrational numbers) or enrichment for standard topics in geometry (polygons, angles, and constructions). But this book isn't a "course" in the traditional sense. It consists of a carefully sequenced collection of problem sets designed to develop several interconnected mathematical themes. These materials provide participants with the opportunity for authentic mathematical discovery—participants build mathematical structures by investigating patterns, use reasoning to test and formalize their ideas, offer and negotiate mathematical definitions, and apply their theories and mathematical machinery to solve problems. *Fractions, Tilings, and Geometry* is a volume of the book series "IAS/PCMI—The Teacher Program Series" published by the American Mathematical Society. Each volume in this series covers the content of one Summer School Teacher Program year and is independent of the rest.

Embracing Reason Daniel Chazan 2009-12-16 This book tells a single story, in many voices, about a serious and sustained set of changes in mathematics teaching practice in a high school and how those efforts influenced and were influenced by a local university. It includes the writings and perspectives of high school students, high school teachers, preservice teacher candidates, doctoral students in mathematics education and other fields, mathematics teacher educators, and other education faculty. As a whole, this case study provides an opportunity to reflect on reform visions of mathematics for all students and the challenges inherent in the implementation of these visions in US schools. It challenges us to rethink boundaries between theory and practice and the relative roles of teachers and university faculty in educational endeavors.

The Stack and Tilt Swing Michael Bennett 2009-11-12 An in-depth, full-color, step-by-step guide to the new golf swing that has taken the PGA Tour by storm The traditional golf swing requires a level of coordination that few golfers have. So it's no surprise that, despite huge advances in club and ball technology, the average golf handicap in America has dropped by only one stroke since 1990. Maverick golf instructors Michael Bennett and Andy Plummer spent a decade researching the swing, eventually combining physiology and physics to create a method they dubbed the "Stack and Tilt." The result? Big-name pros like Mike Weir, Tommy Armour III, and Aaron Baddeley are already converts, and Bennett and Plummer are now two of the most soughtafter swing coaches in the game. Making these breakthroughs available to everyone, *The Stack and Tilt Swing* is a handsome, fully illustrated, complete course, packed with more than two hundred full-color photographs that make it easy for golfers at all levels to adopt this radical yet simple approach. Analyzing why the traditional swing won't work for most golfers, the authors explain the importance of keeping the upper body stacked over the lower body, while the spine tilts toward the target during the backswing, greatly reducing the inconsistencies created by the old-fashioned approach. Enhanced with practice routines, a troubleshooting list, test cases, and point-by-point assistance, this is the breakthrough guide to golf's hot new secret weapon.

Teaching Learning for Effective Instruction Michelle M. Buehl 2022-10-01 Given the complexity of learning, an increasingly diverse student population, and growing demands on today's teachers, educational psychology has never been more relevant for informing instructional practice. and implement effective instruction that is responsive to the needs of their learners. As part of the six-part series *Theory to Practice: Educational Psychology for Teachers and Teaching*, this volume highlights what and how teacher educators should teach about learning so that developing teachers will be more effective in their instructional practice. Preservice teachers represent a group of unique learners; in that they are learning about learning in order to support others' learning. Similarly, teacher educators represent a unique group of educators in that they are guiding others in not just content knowledge but also in how to teach content across a variety of domains. As a means to highlight the ideas and constructs most essential for preservice teachers to learn, this volume was crafted for teacher educators, whether teaching educational psychology content incorporated into domain-specific courses or in a dedicated educational psychology course. Each chapter offers insight into what teachers need to know about learning as well as practical applications for how to teach the content. Chapters draw from a variety of theoretical perspectives about learning and identify common misconceptions that educational psychology instructors and teacher educators need to address in their work with preservice teachers. ENDORSEMENT: "The volume takes an expansive and inclusive view of teacher education and highlights how educational psychology can contribute to conversations about learning, motivation, teaching, inquiry, cooperation and collaboration, study strategies, intercultural competence, assessment, and student perceptions." — Nancy E. Perry & Anita Woolfolk Hoy
