Ambulatory Gynaecology - Kevin Jones

2008-04

"This book sets out how the concept of ambulatory gynaecology can be applied to the main areas of gynaecological practice. It describes how national guidelines can be integrated into modern gynaecological practice in the context of the Government's National Health Service (NHS) plan and provides an essential guide to all practising clinicians." "A change from traditional care pathways to more cost effective, patient-centred approaches to medical practice lies at the heart of modern health service management. A 'see and treat' management philosophy is growing. 'One stop' clinics and 'day surgery' operations are

replacing traditional outpatient consultations and inpatient surgery and the term 'ambulatory gynaecology' is being adopted to describe this philosophy."--BOOK JACKET.

Androgens and the Aging Male - B.J. Oddens
1996-11-15

While menopause in women is a well-established and well documented phenomenon, the andropause in men is a relatively new concept. The terms male menopause and andropause suggest that this is an abrupt phenomenon related to a sudden deprivation of sex hormones. Unlike the menopause, which has

a relatively sudden onset, the andropause appears to be a gradual process. It has been hypothesized that an androgen deficiency might develop with aging. Androgens and the Aging Male explores this hypothesis. The book focuses on the gradually progressive problems related to the decline in androgens that can occur with advancement of age. It examines the debate about the extent to which an age-dependent decline in androgens leads to health problems that affect or impair the quality of life, and the theory behind it. In addition, it reviews studies evaluating the effects of androgen supplementation. Androgens and the Aging Male comprehensively covers androgen function and how it changes over time.

1994-03-30

The field of sexual behaviour has been notoriously neglected in social research and there has been no major survey of sexual behaviour since the Kinsey report in the late 1950s. Various social and health problems, including the AIDS epidemic and the increase in teenage pregnancies have recently underlined the need for an up to date and authoritative analysis of current sexual behaviour. Sexual Attitudes and Lifestyles is the result of a major statistical survey of the sexual behaviours and attitudes of 20,000 UK citizens, collected by written questionnaires and face to face interviews. It is the most comprehensive and up to date source of information on human sexual behaviour available and the first official UK-based resource ever published.

Identification of Systemic Biomarkers in Serum, Urine, and Deoxyribonucleic Acid as Indicators for Environmental Exposures and the Development of Metabolic Outcomes

Among Women in the United States - Yan Song 2014

Type 2 diabetes (T2D) is a metabolic disorder that is characterized by high blood glucose in the context of insulin resistance and β -cell dysfunction. Excessive body weight is associated with an increased risk of T2D and other major chronic diseases including cardiovascular disease and certain cancers. The current work focuses on the identification of systemic biomarkers in various biological samples, including serum, urine, and DNA, as indicators for environmental risk factors and the development of T2D and obesity in different human populations. Environmental endocrine-disrupting chemicals (EDCs) have been shown to affect the biosynthesis, secretion, transport, binding action, and metabolism of endogenous sex hormones, and were suggested to be associated with increased risk of developing T2D and obesity. In Chapter 1, we conducted a meta-analysis study to comprehensively assess the

role of EDCs in affecting risk of T2D and related metabolic traits. We found that both persistent (including dioxin, polychlorinated biphenyls, and chlorinated pesticides) and non-persistent EDCs (including bisphenol A and phthalates) may affect the risk of developing T2D. To evaluate urinary concentrations of BPA and major phthalate metabolites in relation to prospective weight change, we conducted a prospective analysis in the Nurses' Health Study (NHS) and NHSII in Chapter 2. Our data suggest urinary concentrations of BPA and certain individual phthalate metabolites were associated with modestly greater weight gain in a dose-response fashion. These data are consistent with a potential role of BPA and phthalates in weight gain, although more prospective data are needed to corroborate these observations. In previous studies, T2D was associated with biomarkers on different molecular pathways. Earlier prospective studies have shown that low birth weight (LBW), an indicator of intrauterine

growth restriction, was predictive of higher risk of T2D in adulthood, but the pathways that lead LBW individuals to the onset of T2D are still unclear. In Chapter 3, we assessed the effect of LBW on T2D risk that is explained by potential mediators on different biological pathways using mediation modeling in a case-control study of T2D in the Women's Health Initiative (WHI). We found that the effect of LBW on T2D risk seems mainly mediated by insulin resistance, which is further explained by circulating levels of sex hormone-binding globulin (SHBG), E-selectin, and systolic blood pressure. These prospective data provide quantifiable mechanistic evidence linking LBW to increased risk of T2D whilst presenting risk stratification and intervention in a population at greater risk of developing T2D later in life. The process of biological aging involves in the pathogenesis process of metabolic disorders including T2D and obesity. It is also necessary to examine the potential predictors and determinants of biological aging.

Despite the consistent observations that women outlive men, the mechanisms underlying the relation between sex and longevity have not been fully elucidated. In Chapter 4, we examined the associations of circulating estradiol and testosterone with leukocyte TL in WHI. We found that serum concentration of estradiol was not associated with leukocyte TL in this large sample of postmenopausal women. Total and free testosterone levels were inversely associated with TL in Asian/Pacific Islander women but not in black and Hispanic women. Future studies to replicate our observations are warranted to address potential ethnicity-specific relations.

Optimizing Women's Health through

Nutrition - Lilian U. Thompson 2007-12-03

It is no surprise that women and men experience biological and physiological differences fundamentally and throughout the lifecycle.

What is surprising is that faced with such a self-evident truth, there should be so little consideration to date of how these differences affect susceptibility to disease and metabolic response to dietary treatment. Understanding these differences and developing a gender-based approach focusing on the specific needs and conditions of women is crucial to achieve effective nutritional strategies for women's health. Expanding the knowledge-base regarding sex, nutrition, and medicine, *Optimizing Women's Health through Nutrition* presents the

biology, physiology, and metabology unique to women. The book demonstrates in a practical, accessible manner the scientific application of this data addressing lifecycle changes, disease prevention, and treatment. Based on sound research and supported by extensive references, it begins by describing recent research on biological and physiological differences and how these differences translate into varying disease trends between the sexes. Contributions describe the nutritional needs of women during the lifecycle, particularly during adolescence, pregnancy and lactation, premenopause, and menopause and midlife stages. The bulk of the book addresses each of the common major diseases or conditions that specifically affect the health of women. It emphasizes the role of nutrition in disease risk reduction as well as management and treatment of disease. Specific disease selection was dictated by those in which women are more vulnerable or have a higher incidence than men. The concluding section
