How Autism Killed My Brother - Tom Jacobons 2016-03-18

Tom shares how insurance companies let autism kill his brother by not providing him with social skills coaching. Tom's brother desperately wanted help with his social skills and his family felt helpless to help him because insurance companies would not allow him to get social skills coaching. Tom shares how non-profits and insurance companies have little understanding of high functioning autism. Tom and his family tried everything to help their son but they were trapped by a broken system for people with developmental disabilities and a broken mental health system. Tom hopes that sharing about how autism killed his brother Sam there will be doors opened to help people on the high functioning end of the Autism Spectrum receive better services. Tom tried to work with Sam on social skills himself but having autism too he was very limited on the amount of knowledge he was able to share with Tom. Tom and his mother feel guilty that they could not save Tom from autism but know they did everything they could. Now Tom and his mother advocate for better support services for people with autism and mental illness. There is not enough known about the relationship between autism and mental illness and autism non-profit organizations do not want to address the issue because they are afraid of it and do not know how to address it. In this book Tom will give some ideas and tips on how we can improve the mental health care system and help people like Sam get access to much needed social skills coaching like he wanted. Tom shares strategies and techniques on how to improve the system to help all people effected by autism instead of just some people who have autism. This is a great educational and informative book for those wanting to know more about how to help people with autism. Tom shares how autism killed his brother and how he plans to stop autism from killing others like Sam. Here is an excerpt from the book. "I feel like a failure because I let my brother die but I know there was nothing that I could have done because we did not receive any help from doctors or insurance at all. I really believe that Anthem killed my brother by denying him the services that he needed. It is very unfortunate that an insurance company was more interested in protecting their shareholders than they are in actually helping people with the disorder that they have."

50 Shades of Black and White Autism Is Not Grey - Tom Jacobons 2015-09-23

This book will educate the reader about how autism is very much a black and white disorder. There are no grey areas with an autism like mind because they are wired differently. Tom shares how he likes to verbally negotiate all of his relationships so that there are no grey areas. He shares how he needs everything to be black and white so he is able to understand the situation. Tom negotiates all kinds of relationships verbally including romantic relationships. He shares in this book that romantic relationships are especially important to negotiate because you need to know what each other are comfortable with and not comfortable with in all relationships. It is important that people with autism understand everything in terms of black and white and all of the grey areas are eliminated to the best level that they can be. Tom shares how he likes clear cut yes and no answers and he tries to make sure all of the maybes or I do not know's are taken out of every social relationship that he has. In this book Tom will teach you how to verbally negotiate a relationship with someone. This is excellent reading material for anyone who loves or cares for someone with autism. Here is an excerpt from the book. "Autism is not a grey area. There is nothing grey about autism. Autism is very much a black and white thing especially for me. When it comes to dating, relationships, and sex I need things to be very clear and black or white. I will easily become confused by any of the grey areas that are associated with dating, relationships, sex, and social boundaries. I need for things to be very black and white so that I am able to understand them. If they are not black and white I just get so overwhelmed, scared, and confused. Having autism means that my brain works like an on and off switch. I either am all in something or completely all out of it. There is no in-between stages for me as those in-between stages or grey areas become very overwhelming and confusing to me. The grey areas are the maybe's and the I don't knows. When it comes to my life I need people to be very clear with what their

intentions are. They need to either say yes or no and there is no in-between that. If people are not clear and do not say yes or no to me I do not know if what we are doing is okay or not. This is extremely crucial in dating and social relationships because if I do not know if a woman is comfortable with what I am doing and just have to guess because I am unable to read her body language or non-verbal communication there is a good chance that I will get it wrong and not understand what she is saying."

Some with Asperger's will usually find it difficult to understand normal social cues. They can feel very alone, yet have no clue as to how to express the feelings inside them. They can feel constantly rejected and harassed by those around them and even the ones who love them. You must truly understand this syndrome in order to have a good relationship with a person that has this disorder ... If you know someone with Asperger's your goal should be to learn as much as you can about this disorder. You need to understand why people with this syndrome think and live the way they do. I created this book so you can communicate and learn coping techniques that will create better lives for you and your loved one."--Back cover.

Hundreds more have lost ATEC points, as well as shown many cognitive, behavioral, emotional and physical gains thanks to the protocol outlined in these pages. This edition includes all protocol updates and a whole lot more including: (1) how to heal older, self-injurious and/or aggressive children; (2) GcMAF and its role in healing autism; (3) gluten's role in molecular mimicry and autoimmunity; (4) a new method of CD preparation; (5) an improved and easier to follow parasite protocol; along with (6) a special calendar so you know what to do when; (7) many new testimonials from parents sharing their real-life experiences using this protocol; and much more... Dietrich Klinghardt MD, PhD, says... The world of autism is rocking again. Kerri Rivera has done it. In this comprehensive book she has condensed and simplified the core elements of the biomedical approach, those that work 90% of the time on 90% of the children. Her focus on using a unified and affordable approach to reduce the body burden of chronic infections and infestations is addressing the very core issue of most autistic children and adults. It has made her method the most

powerful tool to this day to help many children recover safely, inexpensively and solidly. Her research is validated by the enormously positive response from parents from all over the world. Teri Arranga, Executive director of AutismOne, says... In 3 years, 115 children previously diagnosed with regressive autism were able to shed their diagnosis, their symptoms and return to an overall state of health and vitality. If you have any interest in finding out how they were able to heal you need to read this book. Kerri has a heart for children with autism, and she cares greatly about recommending safe, economical interventions that are helping to confront an epidemic.

There are so many more unwritten social rules involved with dating and intimacy than there are in friendship. He talks about how it is hard to not say what he is truly meaning to a woman. Tom has a hard time hiding his feelings and emotions with dating. He speaks about how he hates that he has to learn how to play a game or pretend to be someone he is not in order to get someone to like him. He shares openly how women will tell him the only way they would date him is if he pays them an autism bill or fee for being autistic. Tom has always struggled in the area of dating and in this book he talks about how women think he stalks them and texts them too much but they never tell him why they feel this way. He speaks of the importance of teaching people with autism necessary social skills in order to learn how to form an intimate relationship. This book will discuss various topics from socializing, puberty, sexuality, love, all the way to intimacy and marriage as a person on the autism spectrum. Autism Killed My Brother - Tom Jacobons 2016-05-04

Tom shares how untreated autism killed his brother. Autism affects all of us in different ways and no two people are the same. Tom's brother Seth struggled with autism because he wanted to be neurotypical. Tom never desired to be neurotypical and embraced his autism. He tried to get Seth to embrace his autism and do the same thing but Seth was too far gone and sick. Seth needed a lot of help. Seth tried to get help with social skills coaching only to find out that insurance would not cover it because there was no scientific evidence that it worked. Seth was furious that the insurance industry would treat him and others with autism like they were science experiments. He wrote a lot of letters to politicians and even to the president about why he needed social skills coaching and yet not one person was able to simply reply to his emails. Seth felt even more discouraged that no one would listen to him and he became very agitated and ended up killing himself. Seth met and fell in love with one woman in 2006. She was his everything for three weeks until she decided that she did not like him and sent him a text telling him that it was over and she was not interested any more. I think that experience is what eventually led to Seth's suicide. It is very important to raise awareness about suicide and autism. There is a higher risk of suicide among adults with autism than their neurotypical counterparts. It is not surprising that due to the social isolation and loneliness that a person with autism would commit suicide. Seth was a great brother and friend. It saddens me that he lost his battle with autism. While I do not see having autism as being a battle because it is a part of who I am I know that Seth had a very difficult time accepting his autism and loving himself for who he is. Because of this he took his life leaving myself and my parents behind to cope wondering what else we could have done to help him. Here is an excerpt from the book. "Samantha was only in the relationship to take advantage of someone who did not know any better. She kept telling Seth if he bought her things she would take care of him and provide for him. Seth had never had a relationship and did not realize that you did not have to buy people things in order to get them to like you. Seth had no idea he was being taken advantage of and since he did not tell everyone what was going on no one was able to stop him or help him. Seth spent three weeks dating this woman and spent over \$4,000.00 on her. Samantha did not even like Seth and was just using him. Imagine being Seth and finding out the woman you love does not love you nor does she care about you.

How would that make you feel? It would turn out that Samantha was actually engaged to be married and her wedding was called off by the groom at the last minute. She was only looking for a rebound relationship but Seth was looking to get married and sweep her off her feet."

Measuring and Visualizing Learning in the Information-Rich Classroom - Peter Reimann 2015-11-19

Integrated information systems are increasingly used in schools, and the advent of the technology-rich classroom requires a new degree of ongoing classroom assessment. Able to track web searches, resources used, task completion time, and a variety of other classroom behaviors, technology-rich classrooms offer a wealth of potential information about teaching and learning. This information can be used to track student progress in languages, STEM, and in 21st Century skills, for instance. However, despite these changes, there has been little change in the kind of data made available to teachers, administrators, students, and parents. *Measuring and Visualizing Learning in the Information-Rich Classroom* collects research on the implementation of classroom assessment techniques in technology-enhanced learning environments. Building on research conducted by a multinational and multidisciplinary team of learning technology experts, and specialists from around the globe, this book addresses these discrepancies. With contributions from major researchers in education technology, testing and assessment, and education psychology, this book contributes to a holistic approach for building the information infrastructure of the 21st Century school.

Puberty and Sex with Autism - Tom Jacobons 2017-08-06

Tom describes what it means to have a sexual relationship with autism and how puberty effected his life as he learned to interact with women. While puberty may have delayed Tom's interest in sex with women it certainly did not stop it. Now Tom tries to figure out the best way to approach handling his feelings and emotions regarding puberty and sexuality so that he can live a functional lifestyle. Tom is all about being healthy and he describes in this book how having sex improves a person's mental, emotional, and physical well being. Tom says that there are many people who would assume autistic people do not have an interest in sex but in most cases Tom feels that assumption is inaccurate. Tom hopes by sharing his inner most desires, wants, and sexual needs with the reader in this book that their eyes would be opened to the alarming issue that people with autism do indeed have sexual interest and desires to and allow each and every person to start brainstorming together how to help people with autism explore their sexuality.

Social Relationships with Autism - Tom Jacobons 2015-09-03

Social relationships involve so much more than just practicing good social skills. Adaptive social skills or adaptive living skills are simple for people with high-functioning autism but what is extremely challenging for folks who are mid to high functioning on the autism spectrum is understanding social thinking. Social thinking involves understanding body language, and reading a person's facial expressions to be able to fully understand the complete context of the conversation. Social errors or mistakes can be made even when we have good social skills if we do not have good social thinking skills. Without social thinking skills people with autism often misread or misunderstand the context of the social situation. Tom shares how important he feels it is that children with autism are receiving social skills coaching that helps them learn how to read social context in all of their social relationships with their peers. There are three components to social skills. 1 The social skill itself. 2 Social Thinking 3. Social Context This book gives tips for teaching children and adults with autism about social thinking and social context.

How Temple Grandin Ruined Autism - Tom Jacibons 2016-05-04

Tom talks about how Temple Grandin ruined Autism for him and his peers. Tom is tired of being compared to Temple Grandin. Each person with autism is unique and if you have only met one person with autism then you have only met one person with autism. Tom's insurance company is constantly comparing him to the success of Temple Grandin. Everything Tom asks for is compared to Temple Grandin's life. Tom talks about how Temple's success with autism has made it hard for others to be able to get the help they need with autism. Tom is tired of being compared to Temple Grandin. He loves Temple but he does not feel that his autism services should be designed around the success of one person with Autism like Temple Grandin. Tom has been fighting his insurance company for social skills training for years and their response to him is that Temple Grandin did not have any social skills training. That is not entirely true as she went to a boarding school where she received a lot of extra special supports. The other factor is that not everyone has the same desires and the same outcomes as Temple. Tom talks about how Temple has no desire to date or have a romantic relationship. Tom on the other hand is obsessed with dating and relationships.

Relationships are a special interest for Tom so he and Temple are completely opposites when it comes to the goals that they have in life. Temple is happy embracing autism and being successful as an autistic adult and Tom would like to learn neurotypical social skills to make more neurotypical friends and learn how to date neurotypical women. Tom feels very frustrated and trapped because everyone keeps comparing him to Temple Grandin. This book is a story of how Temple Grandin ruined autism for Tom and some of his friends like him. Here is an excerpt from the book. "I have been in several arguments with my insurance company about social skills coaching and they keep circling back to "Temple Grandin did this without insurance, Temple Grandin did that without insurance. Temple Grandin this, Temple Grandin that." It get so annoying to be compared to someone who is not even remotely close to the same age as me. Temple grew up in a completely different time in the world. Temple is great and I love her but man I just wish people could understand that I am not Temple Grandin. I feel like I spend my whole life trying to prove to people that I am not Temple Grandin. Everyone knows who Temple Grandin is and people have read her books and seen her movie. I am all for raising awareness but there are more people with autism than Temple Grandin and I feel like people need to become more aware that there are others out there that have autism that are unique and different to Temple. Temple is great and I am glad she was able to get the help she needed from a young age. Her mother did a great job but there are many other children with autism whose mothers do not have the resources to ensure that their children get the type of treatment that Temple Grandin got when she was growing up."

Tom shares advice for parents on how to have talks with your teenager about sex and educate them about sex. Someone with autism might not have the communications skills to let anyone know that they are interested in sex and exploring their sexuality. It is important that parents and educators work hard to try and understand when the time is appropriate for them to reach out and have the conversation about sex and sexuality with the teen with autism. Tom shares the story of how a woman with autism got pregnant because her mother told her that she could not get pregnant until she got married. The girl thought her mother meant that she could not physically get pregnant until she got married and did not practice safe sex and did not seem to have the social thinking skills to figure out the context of the words her mother was telling her. She felt betrayed by her mother because she always trusted her mom and her mother told her she could not get pregnant until she got married.
