*The Evolution of Human Sexuality* Donald Symons 1979-08-30 Anthropology, Sexual Studies, Psychology, Sociology, Gender and Cultural Studies

Why Women Have Sex Cindy Meston 2010-04-01 Why do women have sex? Is it purely for pleasure or the desire to reproduce? In their ground-breaking book, clinical psychologist Cindy Meston and evolutionary psychologist David Buss investigate the underlying sexual desires of women and identify 237 distinct motivations for sex. Drawing on more than a thousand intensive interviews conducted solely for the book, as well as their pioneering research on physiological response and evolutionary emotions, Meston and Buss give us a remarkably complex and nuanced portrait of female sexuality. They explore the use of sex as a defensive tactic against a man's infidelity (protection), as a ploy to boost self-confidence (status), as a barter for gifts (resource acquisition), or even as a cure for a headache (medication). *Why Women Have Sex* explores the deep-seated psychology and biology of female sexuality, and promises to inform every woman's - and her partner's - awareness of her relationship to sex and her own sexuality.

**The Evolution Of Desire** David M. Buss 1994 How we choose—and lose—our mates has always been a source of fascination. This controversial book is the first to present a unified theory of human mating behavior. *The Evolution of Desire* is based on the most massive study of human mating ever

undertaken, encompassing more than 10,000 peoples of all ages from thirty-seven cultures worldwide. If we all want love, why is there so much conflict in our most cherished relationships? To answer this question, we must look into our evolutionary past, according to David M. Buss. For in attracting, keeping, and even breaking up with our mates, we are closer to our ancestral forebears than many of us think.

**The Anatomy of Sex and Power** Michael Hutchison 1990 The brain revolution of today--the technological knowledge of what goes on in the brain--is as tradition-shattering as was the sexual revolution of the 60's. Hutchison deals with both revolutions and the research into the link between sexual desire and neurochemicals, and the interdependence of sex and power.

**Social Psychology** Kenneth S. Bordens 2013-06-17 This second edition presents the core fundamentals of the subject in 11 manageable chapters while maintaining the book's scientific integrity. The research methods students need to understand, interpret, and analyze social psychological research are emphasized throughout. The streamlined approach provides an economical textbook for students and a flexible format that allows instructors to cover the entire book in a single semester. A book specific Web site contains a free online study guide and a variety of teaching tools. An Instructor's Manual/Test Bank and a Computerized Test Bank are also available.

**The Evolutionary Bases of Consumption** Gad Saad 2007-02-05 The Evolutionary Bases of Consumption by Gad Saad applies Darwinian principles in understanding our consumption patterns and the products of popular culture that most appeal to individuals. The first and only scholarly work to do so, this is a captivating study of the adaptive reasons behind our behaviors, cognitions, emotions, and perceptions. Thi

Kirkus Reviews 1982 Adult books are categorized by genre (i.e., fiction, mystery, science fiction, nonfiction). Along with bibliographic information, the expected date of publication and the names of literary agents for individual titles are provided. Starred reviews serve several functions: In the adult section, they mark potential bestsellers, major promotions, book club selections, and just very good books; in the children's section, they denote books of very high quality. The unsigned reviews manage to be discerning and sometimes quite critical.

*Cooperation (Psychology Revivals)* Michael Argyle 2013-11-26 Is human nature cooperative? Man is often said to be a social animal - but what does that mean? Michael Argyle believed that one of the most important components - our capacity to cooperate - had been overlooked and indeed that the whole notion of cooperation had not been properly understood. In this book, originally published in 1991, the author showed he was critical of earlier approaches, and put forward a new and extended understanding of what cooperation consists of, showing the form it took in different relationships and its origins in evolution and socialisation. He offered new solutions to intergroup and other social problems and took a new look at language and communication as a cooperative enterprise.

**Evolution and Human Behavior** John Cartwright 2000 The book covers fundamental issues such as the origins and function of sexual reproduction, mating behavior, human mate choice, patterns of violence in families, altruistic behavior, the evolution of brain size and the origins of language, the modular mind, and the relationship between genes and culture.

*Motivation* Robert Clarence Beck 1990 Textbook for undergraduate students constitutes an experimentally-oriented survey of theory and research on animal and human motivation. Annotation copyright Book News, Inc. Portland, Or.

title takes a 'sociobiological' approach to the exploration of sexual habits, looking at the fundamental biological nature of humans. The book covers the spectrum of human sexuality, considering love and marriage, variant sexuality and social influences. This is a valuable reissue for any student of sexual psychology or cultural and evolutionary anthropology with an interest in the fundamental influences on human sexuality.

Attachment Theory and Research Tommie Forslund 2021-03-29 As interest in attachment theory continues to grow, misconceptions of the theory are becoming increasingly common. Important texts on major theoretical and empirical contributions are often too extensive for non-specialist readers or not readily available to clinicians. Designed to address a significant gap in literature, Attachment Theory and Research: A Reader presents a carefully curated selection of book chapters and journal articles on the subject—complemented by previously unpublished material by the founder of the theory. This valuable new resource provides practitioners, students, policymakers, and general readers an accessible and up-to-date view of the concepts, development, and diversity of attachment theory. The Reader comprises 15 succinct chapters by many of the most influential researchers in the theory, covering the basis of attachment theory and the current state of the field. The book brings together a wide range of works, many of which challenge common assumptions and offer intriguing new insights on attachment theory and research. Topics include psychoanalytic theories of separation anxiety, concepts of anxiety, stress, and homeostasis, the origins of disorganized attachment, cultural differences in caregiving practices, reactive attachment disorder (RAD) and disinhibited social engagement disorder (DSED), the future prospects of attachment theory, and more.

**The Oxford Handbook of Evolutionary Psychology and Romantic Relationships** Todd Kennedy Shackelford 2023-02-28 "Evolutionary social science is having a renaissance. This volume showcases the empirical and theoretical advancements produced by the evolutionary study of romantic relationships. The editors assembled an international collection of contributors to trace how evolved psychological mechanisms shape strategic computation and behavior across the lifespan of a romantic partnership. Each chapter provides an overview of historic and contemporary research on the psychological mechanisms and processes underlying initiation, maintenance, and dissolution of romantic relationships. Contributors discuss popular and cutting-edge methods for data analysis and theory development, critically analyse the state of evolutionary relationship science, and provide discerning recommendations for future research. The handbook integrates a broad range of topics (e.g., partner preference and selection, competition and conflict, jealousy and mate guarding, parenting, partner loss and divorce, and post-relationship affiliation) that are discussed alongside major sources of strategic variation in mating behavior, such as sex and gender diversity, developmental life history, neuroendocrine processes, technological advancement, and culture. Its content promises to enrich students' and established researchers' views on the current state of the discipline and should challenge a diverse cross-section of relationship scholars and clinicians to incorporate evolutionary theorizing into their professional work"--

**Gender Gap** David P. Barash 2017-07-12 Let's face it, say Barash and Lipton: Males and females, boys and girls, men and women are different. To be sure, these differences are often heightened by distinctions in learning, cultural tradition, and social expectation, but underpinning them all is a fundamental difference that derives from biology. Throughout the natural world, males are those

creatures that make sperm; females make eggs. The oft-noticed "gender gap" derives, in turn, from this "gamete gap." In *Gender Gap*, Barash and Lipton (husband and wife, professor and physician, biologist and psychiatrist) explain the evolutionary aspects of male-female differences.

*The Chemistry Between Us* Larry Young PhD 2012-09-13 How much control do we have over love? Much less than we like to think. All that mystery, all that poetry, all those complex behaviors surrounding human bonding leading to the most life-changing decisions we'll ever make, are unconsciously driven by a few molecules in our brains. How does love begin? How can two strangers come to the conclusion that it would not only be pleasant to share their lives, but that they must share them? How can a man say he loves his wife, yet still cheat on her? Why do others stay in relationships even after the romance fades? How is it possible to fall in love with the "wrong" person? How do people come to have a "type"? Physical attraction, jealousy, infidelity, mother-infant bonding—all the behaviors that so often leave us befuddled—are now being teased out of the fog of mystery thanks to today's social neuroscience. Larry Young, one of the world's leading experts in the field, and journalist Brian Alexander explain how those findings apply to you. Drawing on real human stories and research from labs around the world, *The Chemistry Between Us* is a bold attempt to create a "grand unified theory" of love. Some of the mind-blowing insights include: Love can get such a grip on us because it is, literally, an addiction. To a woman falling in love, a man is like her baby. Why it's false to say society makes gender, and how it's possible to have the body of one gender and the brain of another. Why some people are more likely to cheat than others. Why we sometimes truly can't resist temptation. Young and Alexander place their revelations into historical, political, and social contexts. In the process, they touch on everything from gay marriage to why single-mother households might not be good for society. *The Chemistry Between Us* offers powerful

insights into love, sex, gender, sexual orientation, and family life that will prove to be enlightening, controversial, and thought provoking.

### Evolutionary Psychology

**Ancestral Roots** Timothy Clack 2009 Human evolution explains how we have found ourselves in the wrong place at the wrong time. Issues of modern living; depression, obesity, and environmental destruction, can be understood in relation to our evolutionary past. This book shows how an awareness of this past and its relation to the present can help limit their impact on the future.

**Psychology Around Us** Ronald Comer 2012-02-07 Comer and Gould's Psychology Around Us demonstrates the many-often surprising, always fascinating-intersections of psychology with students' day-to-day lives. Every chapter includes sections on human development, brain function, individual differences and abnormal psychology that occur in that area. These "cut-across" sections highlight how the different fields of psychology are connected to each other and how they connect to everyday life. Every chapter begins with a vignette that shows the power of psychology in understanding a whole range of human behavior. This theme is reinforced throughout the chapter in boxed readings and margin notes that celebrate the extraordinary processes that make the everyday possible and make psychology both meaningful and relevant. The text presents psychology as a unified field the understanding of which flows from connecting its multiple subfields and reinforces the fact that psychology is a science with all that this implies (research methodology, cutting edge studies, the application of critical thinking).

**Eight Brief Lessons on Life** T. Byram Karasu 2018-10-31 This book is about the basic lessons on fundamental aspects of life that everyone eventually learns painfully. The book is a headstart, a solid platform of knowledge on love, marriage, work, believing and joyfulness.

**Straight Science? Homosexuality, Evolution and Adaptation** Jim McKnight 2003-09-02 A genetic basis for homosexuality has been all but proved, yet Darwinism, the most widely accepted evolutionary theory, emphasises successful reproduction. How do we explain a lifetime preference for non-reproductive sex? Whilst social constructionism offers explanations in terms of social learning and cultural preferences, the body of evidence for a genetic predisposition to homosexuality grows. Social learning argues that homosexual sex is merely misdirected and therefore futile, but far from dying out it continues through the ages and is found in different cultures. What if there was an evolutionary advantage to homosexuality? Straight Science? Homosexuality, Evolution and Adaptation dares to ask such questions.

Gender Gap Judith Eve Lipton Let's face it, say Barash and Lipton: Males and females, boys and girls, men and women are different. To be sure, these differences are often heightened by distinctions in learning, cultural tradition, and social expectation, but underpinning them all is a fundamental difference that derives from biology. Throughout the natural world, males are those creatures that make sperm; females make eggs. The oft-noticed "gender gap" derives, in turn, from this "gamete gap." In Gender Gap, Barash and Lipton (husband and wife, professor and physician,

biologist and psychiatrist) explain the evolutionary aspects of male-female differences. After describing the theory underlying the evolutionary explanation of male-female differences-in accessible, lay-person's language-they show how it applies to specific examples of animal behavior. Then, they demonstrate comparable male-female differences in the behavior of human beings cross-culturally, as well as within the United States. Barash and Lipton apply this approach to male-female differences in sexual inclinations, propensities for violence, parenting styles, and childhood experiences. They invoke much work within the traditional social sciences, such as psychology, anthropology, and sociology, which have typically ignored biological factors in the past. Part of the highly successful revolution in scientific thought has been the recognition that evolutionary insights can illuminate behavior, no less than anatomy and physiology. This new discipline, sometimes called "sociobiology" or "evolutionary psychology," promises to help us make sense of ourselves and of our most significant others, shedding new light on what it means to be male or female. Now available in paperback with a new introduction by the authors, this accessible volume integrates work from a variety of fields, applying a new paradigm to research on gender differences. David P. Barash holds a Ph.D. in zoology and is professor of psychology and zoology at the University of Washington, where he has taught since 1973. He has been especially active in the growth and development of sociobiology as a scientific discipline and has received numerous grants and awards. Barash is the author of more than 170 technical articles, and 20 books. Judith Eve Lipton received her M.D. degree from the University of North Carolina, Chapel Hill, and completed her residency in psychiatry at the University of Washington. She is the founder and president emerita of the Washington Physicians for Social Responsibility, and Fellow of the American Psychiatric Association, specializing in women's health.

*The Sex Imperative* Kenneth E. Maxwell 2013-11-11 "The sex imperative - the irresistible impulse to engage in sexual relations - has enabled animals to share their genes and evolve. Maxwell traces the progress of sex from the simple sharing of genes between cells to the elaborate courtship rituals that developed so sperm could merge with egg. In the effort to join sperm and egg, species have developed some astounding and unusual sexual adaptations. As Maxwell vividly describes the sex lives of various creatures, he attests to the resiliency and amazing adaptability of life to its everchanging environment. By focusing on the diversity of animal sexual relationships, Maxwell enables us to question the very basis of sexuality: What is sex? Why did it evolve? How does sexuality and survival shape the social behavior of animals and humans? The sex imperative is indeed the driving force behind Darwin's theory of random variation and natural selection, better known as "survival of the fittest." Maxwell goes so far as to investigate our latest accomplishment in the science of begetting offspring: genetic engineering." "This awe-inspiring and unique work celebrates the power and wonder of life and sexuality of all creatures - including humans. After reading this engrossing and illuminating work, no one will ever think of evolution in the same way."-- Jacket.

**Love and Intimate Relationships** Norman M. Brown 2013-06-17 Using a style that draws students into the ongoing inquiry into how intimate relationships work, *Love and Intimate Relationships* investigates the life cycle of relationships influences that affect them, theories behind them, and

ways to improve them. Dozens of stories from students themselves, case examples and over 150 tables, figure, and the cartoons of Don Edwing of Mad Magazine help bring the material alive. The book is also unique in exploring aspects of human relationships not covered in other textbooks on the subject. Love and Intimate Relationships helps bring the complex issues surrounding intimate relationships into focus for students from diverse backgrounds. The multidisciplinary perspective of the textbook makes it ideal for introductory courses in psychology, marriage counseling, human relations, and sexuality, and interpersonal relationships

The Evolution of Desire David M. Buss 2016-12-27 A “drop-dead shocker” (Washington Post Book World) that uses evolutionary psychology to explain human mating and the mysteries of love If we all want love, why is there so much conflict in our most cherished relationships? To answer this question, we must look into our evolutionary past, argues prominent psychologist David M. Buss. Based one of the largest studies of human mating ever undertaken, encompassing more than 10,000 people of all ages from thirty-seven cultures worldwide, The Evolution of Desire is the first work to present a unified theory of human mating behavior. Drawing on a wide range of examples of mating behavior — from lovebugs to elephant seals, from the Yanomamö tribe of Venezuela to online dating apps — Buss reveals what women want, what men want, and why their desires radically differ. Love has a central place in human sexual psychology, but conflict, competition, and manipulation also pervade human mating — something we must confront in order to control our own mating destiny. Updated to reflect the very latest scientific research on human mating, this definitive edition of this classic work of evolutionary psychology explains the powerful forces that shape our most intimate desires.

**The Evolution of Human Sociability** Ron Vannelli 2015-09-25 How do desires and fears motivate human sociability? What effect do these motivators have on reproductive, social and political behaviour? And, crucially, how might we understand them separate from preconceived notions of design or higher morality? Taking these questions as a focus, this book examines human evolution with the emphasis on sexual selection and the evolution of a number of human psychological

processes. Exploring evolutionary, sexual and maturational processes, along with primate, fossil and geological evidence, Vannelli argues that human nature can be conceptualised as species-typical desires and fears, derived from sexual selection during human evolution, and that these are major motivators of behaviour. Presenting additional evidence from the anthropology of band societies, along with material from group behaviour, Vannelli highlights the importance of pair-bonding, friendship, alliance behaviour, vengeance seeking and interpersonal politics in social behaviour, providing a unique interdisciplinary framework for understanding human nature and the evolution of human sociability.
