**Visible Learning** John Hattie 2008-11-19 This unique and ground-breaking book is the result of 15 years research and synthesises over 800 meta-analyses on the influences on achievement in school-aged students. It builds a story about the power of teachers, feedback, and a model of learning and understanding. The research involves many millions of students and represents the largest ever evidence based research into what actually works in schools to improve learning. Areas covered include the influence of the student, home, school, curricula, teacher, and teaching strategies. A model of teaching and learning is developed based on the notion of visible teaching and visible learning. A major message is that what works best for students is similar to what works best for teachers - an attention to setting challenging learning intentions, being clear about what success means, and an attention to learning strategies for developing conceptual understanding about what teachers and students know and understand. Although the current evidence based fad has turned into a debate about test scores, this book is about using evidence to build and defend a model of teaching and learning. A major contribution is a fascinating benchmark/dashboard for comparing many innovations in teaching and schools.

Armed Robotic Systems Emergence Robert J. Bunker 2017-11-18 Armed robotic systems-drones and droids-now emerging on the battlefield portend new strategic realities not only for U.S. forces but also for our allies and future potential belligerents. Numerous questions of immediate warfighting importance come to mind with the fielding of these drones and droids that are viewed as still being in their experimental and entrepreneurial stage of development. By drawing upon historical weapons systems life cycles case studies, focusing on the early 9th through the mid-16th-century knight, the mid-19th through the later 20th-century battleship, and the early 20th through the early 21st-century tank, the monograph provides military historical context related to their emergence, and better allows both for questions related to warfighting to be addressed, and policy recommendations related to them to be initially provided.

repertory, which includes the Coronation Anthem Zadok the Priest, forms one of the most impressive and engaging areas of Baroque church music. Most of it was stimulated by Handel's creative contact with the English Chapel Royal, a group of professional singers in a different tradition from the opera stars with whom he worked in the theatre. This is the first full-length study of Handel's English Church music. As well as dealing with the many aspects of the compositions themselves, it traces the background to the diverse items in the repertory, which relates directly to Handel's constant but changing relationship with the Hanoverian British royal family, and was affected by political and dynastic events. It also examines the circumstances of Handel's performances, the building which (unlike his theatres) still survives in London today.
