**Culture as a System** David B. Kronenfeld 2017-08-07 A particular culture is associated with a particular community, and thus has a social dimension. But how does culture operate and how is it to be defined? Is it to be taken as the behavioral repertoire of members of that community, as the products of their behavior, or as the shared mental content that produces the behavior? Is it to be viewed as a coherent whole or only a collection of disparate parts? Culture is shared, but how totally? How is culture learned and maintained over time, and how does it change? In *Meaning and Significance in Human Engagement*, Kronenfeld adopts a cognitive approach to culture to offer answers to these questions. Combining insights from cognitive psychology and linguistic anthropology with research on collective knowledge systems, he offers an understanding of culture as a phenomenon produced and shaped by a combination of conditions, constraints and logic. Engagingly written, it is essential reading for scholars and graduate students of cognitive anthropology, linguistic anthropology, sociology of culture, philosophy, and computational cognitive science.

*Social Structure, Space and Possession in Tongan Culture and Language* Svenja Völkel 2010 This interdisciplinary study investigates the relationship between culture, language and cognition based on the aspects of social structure, space and possession in Tonga, Polynesia. Grounded on extensive field research, Volkel explores the subject from an anthropological as well as from a linguistic perspective. The book provides new insights into the language of respect, an honorific system which is deeply anchored in the societal hierarchy, spatial descriptions that are determined by socio-cultural and geocentric parameters,

kinship terminology and possessive categories that perfectly express the system of social status inequalities among relatives. These examples impressively show that language is deeply anchored in its cultural context. Moreover, the linguistic structures reflect the underlying cognitive frame of its speakers. Just as several cultural practices (sitting order, access to land and gift exchange processes) the linguistic means are not only expressions of stratified social networks but also tools to maintain or negotiate the underlying socio-cultural system."

*Koromu (Kesawai)* Carol Priestley 2019-11-18 This book is a grammatical description of Koromu (or Kesawai), an endangered and previously undescribed language in Papua New Guinea's Ramu Valley. Koromu belongs to the Madang subgroup of the putative Trans New Guinea family. The grammar covers the structures of the language, with an emphasis on information structure. Geographic, linguistic, social and historical setting are described as well as phonology and morphophonology. The book examines the morphosyntactic structures of the language, covering basic clause structure, word classes, phrase structures and structures of spatial reference, verbal morphology, serial verb constructions, experiencer object constructions and the various constructions of clause combining (clause chaining, complement clauses, adverbial and relative clauses). Chapters also deal with noun phrase (non)realisation and morphological signaling of prominence and show how links and tails are encoded grammatically. Appendices contain texts and a wordlist.

**Event Representation in Language and Cognition** Jürgen Bohnemeyer 2010-12-23 Event Representation in Language and Cognition examines new research into how the mind deals with the experience of events. Empirical research into the cognitive processes involved when people view events and talk about them is still a young field. The chapters by leading experts draw on data from the description of events in spoken and signed

languages, first and second language acquisition, co-speech gesture and eye movements during language production, and from non-linguistic categorization and other tasks. The book highlights newly found evidence for how perception, thought, and language constrain each other in the experience of events. It will be of particular interest to linguists, psychologists, and philosophers, as well as to anyone interested in the representation and processing of events.

**Cultural Models** Giovanni Bennardo 2014 This book is about cultural models. Cultural models are defined as molar organizations of knowledge. Their internal structure consists of a 'core' component and 'peripheral' nodes that are filled by default values. These values are instantiated, i.e., changed to specific values or left at their default values, when the individual experiences 'events' of any type. Thus, the possibility arises for recognizing and categorizing events as representative of the same cultural model even if they slightly differ in each of their specific occurrences. Cultural models play an important role in the generation of one's behavior. They correlate well with those of others and the behaviors they help shape are usually interpreted by others as intended. A proposal is then advanced to consider cultural models as fundamental units of analysis for an approach to culture that goes beyond the dichotomy between the individual (culture only in mind) and the collective (culture only in the social realm). The genesis of the concept of cultural model is traced from Kant to contemporary scholars. The concept underwent a number of transformations (including label) while it crossed and received further and unique elaborations within disciplines like philosophy, psychology, anthropology, sociology, artificial intelligence, and cognitive science. A methodological trajectory is outlined that blends qualitative and quantitative techniques that cross-feed each other in the gargantuan effort to discover cultural models. A survey follows of the extensive research about cultural models carried out with populations of North Americans,

Europeans, Latino- and Native-Americans, Asians (including South Asians and South-East Asians), Pacific Islanders, and Africans. The results of the survey generated the opportunity to propose an empirically motivated typology of cultural models rooted in the primary difference between foundational and molar types. The book closes with a suggestion of a number of avenues that the authors recognize the research on cultural models could be traversing in the near future.

**Questions** Jan P. de Ruiter 2012-08-16 Bringing together a team of formal linguists, functional linguists, discourse analysts, anthropologists, psychologists and sociolinguists, this book asks what questions do and how a question can shape the answer it evokes. The volume includes data from a range of languages and cultures.

**The Handbook of Discourse Analysis** Deborah Tannen 2018-02-28 The second edition of the highly successful Handbook of Discourse Analysis has been expanded and thoroughly updated to reflect the very latest research to have developed since the original publication, including new theoretical paradigms and discourse-analytic models, in an authoritative two-volume set. Twenty new chapters highlight emerging trends and the latest areas of research Contributions reflect the range, depth, and richness of current research in the field Chapters are written by internationally-recognized leaders in their respective fields, constituting a Who's Who of Discourse Analysis A vital resource for scholars and students in discourse studies as well as for researchers in related fields who seek authoritative overviews of discourse analytic issues, theories, and methods

The Anthropology of Christianity Fenella Cannell 2006-10-17 This

collection provides vivid ethnographic explorations of particular, local Christianities as they are experienced by different groups around the world. At the same time, the contributors, all anthropologists, rethink the vexed relationship between anthropology and Christianity. As Fenella Cannell contends in her powerful introduction, Christianity is the critical “repressed” of anthropology. To a great extent, anthropology first defined itself as a rational, empirically based enterprise quite different from theology. The theology it repudiated was, for the most part, Christian. Cannell asserts that anthropological theory carries within it ideas profoundly shaped by this rejection. Because of this, anthropology has been less successful in considering Christianity as an ethnographic object than it has in considering other religions. This collection is designed to advance a more subtle and less self-limiting anthropological study of Christianity. The contributors examine the contours of Christianity among diverse groups: Catholics in India, the Philippines, and Bolivia, and Seventh-Day Adventists in Madagascar; the Swedish branch of Word of Life, a charismatic church based in the United States; and Protestants in Amazonia, Melanesia, and Indonesia. Highlighting the wide variation in what it means to be Christian, the contributors reveal vastly different understandings and valuations of conversion, orthodoxy, Scripture, the inspired word, ritual, gifts, and the concept of heaven. In the process they bring to light how local Christian practices and beliefs are affected by encounters with colonialism and modernity, by the opposition between Catholicism and Protestantism, and by the proximity of other religions and belief systems. Together the contributors show that it not sufficient for anthropologists to assume that they know in advance what the Christian experience is; each local variation must be encountered on its own terms. Linguistic Anthropology Anita Sujoldzic 2009-11-30 Linguistic Anthropology theme is a component of Encyclopedia of Social Sciences and Humanities in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. Linguistic anthropology is an interdisciplinary field dedicated to the study of language from an anthropological perspective. This means that, over the years, linguistic anthropologists have regarded language as a sophisticated sign system that contributes to the constitution of society and the reproduction of specific cultural practices. In addition to being a powerful tool for exchanging information, language has been shown to play a crucial role in the classification of experience, the identification of people, things, ideas, and emotions, the recounting of the past and the imagining of the future that is so critical for joint activities and problem solving. The Theme on Linguistic Anthropology discusses essential aspects such as History of Linguistic Anthropology; Language Socialization; Languages in Contact; Comparative and Historical Linguistics; Language and Culture; Social Use of Language (Sociolinguistics); Language and Gender; Multilingualism and Language Planning; Language and Education; Non-Human Primates and Communication; Ape Language Studies; Language, Cognition and Thought; Language Shift and Maintenance; Gesture as Cultural and Linguistic Practice; Linguistic Relativity and Spatial Language; Documenting Endangered Languages and Maintaining Language Diversity. This volume is aimed at the following five major target audiences: University and College Students Educators, Professional Practitioners, Research Personnel and Policy Analysts, Managers, and Decision Makers, NGOs and GOs.

**Representing Space in Oceania** Giovanni Bennardo 2002 Investigates space as a knowledge domain in particular the linguistic, mental and cultural representations of spatial relationships in Oceania.

**Words Matter** Elizabeth Keating 2016-10-18 In a twenty-first-century global economy, in which multinational companies coordinate and collaborate with partners and clientele around the world, it is usually English that is the parlance of business, research, technology, and finance. Most assume that if parties on both ends of the conference call are fluent English speakers, information will be shared seamlessly and without any misunderstanding. But is that really true? *Words Matter* examines how communications between transnational partners routinely break down, even when all parties are fluent English speakers. The end result is lost time, lost money, and often discord among those involved. What's going wrong? Contrary to a common assumption, language is never neutral. It is heavily influenced by one's culture and can often result in unintended meanings depending on word choice, a particular phrase, or even one's inflection. A recent study of corporate managers found that one out of five projects fail primarily because of ineffective transnational communication, resulting in the loss of millions of dollars. In *Words Matter*, you will venture into the halls of multinational tech companies around the world to study language and culture at work; learn practical steps for harnessing research in communication and anthropology to become more skilled in the digital workplace; and learn to use the *Communication Plus Model*, which can be easily applied in multiple situations, leading to better communication and better business outcomes. *Words Matter* is available on Amazon, Google Play, and Apple Books.

**Cultural Models of Nature** Giovanni Bennardo 2019-03-19

Drawing on the ethnographic experience of the contributors, this volume explores the Cultural Models of Nature found in a range of food-producing communities located in climate-change affected areas. These Cultural Models represent specific organizations of the etic categories underlying the concept of Nature (i.e. plants, animals, the physical environment, the weather, humans, and the supernatural). The adoption of a common methodology across the research projects allows the drawing of meaningful cross-cultural

comparisons between these communities. The research will be of interest to scholars and policymakers actively involved in research and solution-providing in the climate change arena.

*Space in Language and Linguistics* Peter Auer 2013-11-27 This book brings together three perspectives on language and space that are quite well-researched within themselves, but which so far

are lacking productive interconnections. Specifically, the book aims to interconnect the following research areas: Language, space, and geography Grammar, space, and cognition Language and interactional spaces The contributions in this book cover geographical language variation within and across languages, language use in stationary and mobile interactional spaces, computer-mediated communication, and spatial reasoning across languages. This range of issues showcases the thematic and methodological breadth of research on language and space. In order to identify interconnections, the respective contributions are accompanied by commentaries that highlight common threads.

*Here - Hither - Hence and Related Categories* Julia Nintemann

2020-07-20 As a follow-up study to the global comparison of spatial interrogatives (*Studia Typologica* 20), the present book examines the spatial declarative counterparts which are provided by the expression class of spatial deictic adverbs. In a functionally motivated typological approach, equivalents of Early Modern English here - hither - hence and there - thither - thence are identified across a sample of 250 languages from all macro-areas. These are also quantitatively assessed to extrapolate areal and global trends of coding patterns. The formal relationships between spatial interrogative and spatial declarative paradigms are analyzed with a focus on the syncretism of categories and of individual cells. Qualitative discussions of patterns precede in-depth treatments of problematic cases and other relevant issues related to the research topic. The quantitative results strongly point to areal linguistic trends concerning the distribution of distinct and non-distinct coding of the three spatial relations Place, Goal, and Source. Additional aspects such as quantitative evaluations of constructional complexity are addressed subsequently.

**Pacific Spaces** A.-Chr Engels-Schwarzpaul 2022-10-14 Delving into Pacific spaces from a variety of disciplinary perspectives and interpretations, this book looks at how the anthropological and architectural can be connected. The contributors to this book - architectural practitioners, architectural and spatial design theorists, anthropologists and historians - show not only how new theoretical perspectives can arise out of comparing aspects specific to one discipline with their equivalents of another, but also demonstrate how a space of emergence is created for something that goes beyond both, enhancing both fields of potentialities.

Marking Indigeneity Tevita O. Ka'ili 2017-10-24 L'éditeur indique : "This book explores how Tongan cultural practices conflict with and coexist within Hawaiian society."

**Pragmaticizing Understanding** Michael Meeuwis 2012-05-01

The ideas that mark modern-day pragmatics are old, but did not start to get more systematically developed until the 1960s and 1970s. Still, the very recognition of pragmatics as a self-standing academic discipline is a product of the 1980s, not least made possible by the establishment of the International Pragmatics Association. One scholar in particular has devoted his life both to IPrA and to the discipline. This volume pays homage to Jef Verschueren on the occasion of his 60th birthday. It celebrates him for his long-standing dedication as Secretary General of IPrA and for his scholarly contributions to the field. We owe to Jef Verschueren the insight that the processes through which language users (do or do not) achieve understanding among each other in communication can only be fully comprehended if approached from a pragmatic perspective, i.e. if understanding is pragmaticized. The chapters in this book are written by scholars who, like Jef Verschueren, have played a key role in the genesis and development of the field, and who still actively contribute to its advancement today. Each author looks back, evaluates the present, and takes on new challenges.

Language, Space, and Social Relationships Giovanni Bennardo 2009-05-14 Discusses the relationship between language and the mental organisation of knowledge, based on research carried out in Polynesia.

*Language, Culture, and Mind* Paul Kockelman 2010-02-18 Based on fieldwork carried out in a Mayan village in Guatemala, this book examines local understandings of mind through the lens of language and culture. It focuses on a variety of grammatical structures and discursive practices through which mental states are encoded and social relations are expressed: inalienable possessions, such as body parts and kinship terms; interjections, such as 'ouch' and 'yuck'; complement-taking predicates, such as 'believe' and 'desire'; and grammatical categories such as mood, status and evidentiality. And, more generally, it develops a

theoretical framework through which both community-specific and human-general features of mind may be contrasted and compared. It will be of interest to researchers and students working within the disciplines of anthropology, linguistics, psychology, and philosophy.

**Comparativism in Art History** Jas Elsner 2017-07-05 Featuring some of the major voices in the world of art history, this volume explores the methodological aspects of comparison in the historiography of the discipline. The chapters assess the strengths and weaknesses of comparative practice in the history of art, and consider the larger issue of the place of comparative in how art history may develop in the future. The contributors represent a comprehensive range of period and geographic command from antiquity to modernity, from China and Islam to Europe, from various forms of art history to archaeology, anthropology and material culture studies. Art history is less a single discipline than a series of divergent scholarly fields ? in very different historical, geographic and cultural contexts ? but all with a visual emphasis on the close examination of objects. These fields focus on different, often incompatible temporal and cultural contexts, yet nonetheless they regard themselves as one coherent discipline ? namely the history of art. There are substantive problems in how the sub-fields within the broad-brush generalization called 'art history' can speak coherently to each other. These are more urgent since the shift from an art history centered on the western tradition to one that is consciously global.

Mind, Brain, and Language Marie T. Banich 2003-10-17 Much of the groundbreaking work in many fields is now occurring at the intersection of traditional academic disciplines. This development is well demonstrated in this important and unique volume, which offers a multidisciplinary view of current findings and cutting-edge issues involving the relationship between mind, brain, and language. Marie T. Banich and Molly Mack have edited a collection of 11 invited chapters from top researchers (and have contributed two of their own chapters) to create a volume organized around five major topics--language emergence, influence, and development; models of language and language processing; the neurological bases of language; language disruption and loss; and dual-language systems. Topics range from the evolution of language and child-language acquisition to brain imaging and the "bilingual brain." To maintain continuity throughout, care has been taken to ensure that the chapters have been written in a style accessible to scholars across many disciplines, from anthropology and psycholinguistics to cognitive science and neurobiology. Because of its depth and breadth, this book is appropriate both as a textbook in a variety of undergraduate and graduate-level courses and as a valuable resource for researchers and scholars interested in further understanding the background of and current developments in our understanding of the mind/brain/language relationship.

**Engaging Environments in Tonga** Arne Aleksej Perminow 2022-03-11 On March 11, 2011, a tsunami warning was issued for Tonga in Polynesia. On the low and small island of Kotu, people were unperturbed in the face of impending catastrophe. The book starts out from the puzzle of peoples' responses and reactions to this warning as well as their attitudes to a gradual rise of sea level and questions why people seemed so unconcerned about this and the accompanying loss of land. The book is an ethnography of the relationship between people and their environment based on fieldwork over three decades.
