WHO Guidelines on Drawing Blood Neelam Dhingra 2010
Phlebotomy uses large, hollow needles to remove blood specimens for lab testing or blood donation. Each step in the process carries risks - both for patients and health workers. Patients may be bruised. Health workers may receive needle-stick injuries. Both can become infected with bloodborne organisms such as hepatitis B, HIV, syphilis or malaria. Moreover, each step affects the quality of the specimen and the diagnosis. A contaminated specimen will produce a misdiagnosis. Clerical errors can prove fatal. The new WHO guidelines provide recommended steps for safe phlebotomy and reiterate accepted principles for drawing, collecting blood and transporting blood to laboratories/blood banks.

An Update on Neurological Disorders Post COVID-19 Infection
Beatrice Paradiso 2023-08-02 Coronavirus disease 2019 (COVID-19), produces the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2), with atypical pneumonia. This

infection is a global health challenge producing post-acute sequelae of SARS-CoV-2 infection (PASC), including neuro-PASC in which direct or indirect invasion of the virus into the brain causes immune dysregulation, hormonal disorders, elevated cytokine levels due to immune reaction and chronic inflammation, direct tissue injury, and persistent low-grade infection. The COVID-19 induced-neuroinflammation promotes blood-brain barrier (BBB) disruption, access of antigens and inflammatory factors into the brain, as well as infection or immune-mediated response in the neuromuscular system. It is therefore necessary to explore whether there is a close correlation with the adenosine pathway, the activation of the ACE receptor by the virus, the concentration of IL6 and the neuro-invasive effect of COVID-19. Other points of interest are the analysis of the autonomic dysfunction induced by cytokines; the effect of vaccine mRNA delivery in Central and Peripheral Nervous System, the long-term effects of Covid 19 infection and/or therapeutic approach in different pandemic countries. In this Research Topic we aim to including submissions and research from different countries, which will allow comparisons of loco-regional clinical experiences, diagnostic flow-charts, and different therapeutic approaches.

Beyond Myalgic Encephalomyelitis/Chronic Fatigue Syndrome

Institute of Medicine 2015-03-16 Myalgic encephalomyelitis (ME) and chronic fatigue syndrome (CFS) are serious, debilitating conditions that affect millions of people in the United States and around the world. ME/CFS can cause significant impairment and disability. Despite substantial efforts by researchers to better understand ME/CFS, there is no known cause or effective

treatment. Diagnosing the disease remains a challenge, and patients often struggle with their illness for years before an identification is made. Some health care providers have been skeptical about the serious physiological - rather than psychological - nature of the illness. Once diagnosed, patients often complain of receiving hostility from their health care provider as well as being subjected to treatment strategies that exacerbate their symptoms. Beyond Myalgic Encephalomyelitis/Chronic Fatigue Syndrome proposes new diagnostic clinical criteria for ME/CFS and a new term for the illness - systemic exertion intolerance disease(SEID). According to this report, the term myalgic encephalomyelitis does not accurately describe this illness, and the term chronic fatigue syndrome can result in trivialization and stigmatization for patients afflicted with this illness. Beyond Myalgic Encephalomyelitis/Chronic Fatigue Syndrome stresses that SEID is a medical - not a psychiatric or psychological - illness. This report lists the major symptoms of SEID and recommends a diagnostic process. One of the report's most important conclusions is that a thorough history, physical examination, and targeted work-up are necessary and often sufficient for diagnosis. The new criteria will allow a large percentage of undiagnosed patients to receive an accurate diagnosis and appropriate care. Beyond Myalgic Encephalomyelitis/Chronic Fatigue Syndrome will be a valuable resource to promote the prompt diagnosis of patients with this complex, multisystem, and often devastating disorder; enhance public understanding; and provide a firm foundation for future improvements in diagnosis and treatment.

Autoimmunity, COVID-19, Post-COVID19 Syndrome and COVID-19 Vaccination Yehuda Shoenfeld 2022-12-03

Autoimmunity, COVID-19, Post-COVID-19 Syndrome and COVID-19 Vaccination covers all aspects of what is perhaps the most dramatic health crisis in the history of modern medicine. Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) raised major concerns about the association between the virus and various autoimmune manifestations. Over 15 distinct autoantibodies and above 10 different autoimmune diseases were found to develop in COVID-19 patients. Moreover, evidence about recovered COVID-19 patients demonstrates that persistent systemic symptoms, which are believed to have an autoimmune-related mechanism, do exist. As it is of great importance to recognize those autoimmune manifestations of COVID-19 and post-COVID-19 syndrome to properly cope with their outcomes in the ongoing pandemic and the long-term post-pandemic period, this book fulfills a vital need in the medical community. Describe the short and long impact of COVID-19 on autoimmunity Provides understanding to the acute and chronic impact of the SARS-CoV-2 Gives insights into the long-term effects of COVID-19 on recovered patients Provides conclusions on the novel terms "chronic post-COVID-19 syndrome", "post-acute COVID-19 syndrome", and "long COVID-19"

The Report covers and provides an overview of patterns and flows of trafficking in persons at the global, regional and national levels, based on trafficking cases detected mainly between 2012 and 2014. It looks at links between trafficking in persons, migration and conflict, and how refugees may be particularly vulnerable to being trafficked. The worldwide response to trafficking in persons, particularly in terms of criminalization and prosecution of trafficking crimes, is also a focus of this edition of the Global Report. Also included are the Country Profiles.

spent his life working as healthcare's last resort, where the unexpected is always around the corner, and life and death decisions are an everyday occurrence. But nothing had prepared Jim and his team for the events of spring 2020, when the Covid-19 pandemic descended. In *Life Support*, he tells the extraordinary month-by-month story of how as the nation came to a standstill, he and his colleagues donned PPE, received an unprecedented influx of patients, transformed their hospital and ultimately faced down the biggest challenge in the history of the NHS. The pandemic raised impossible questions for Jim- how do you fight a new disease? How do you go home at night to your wife and young children when you've spent all day around highly infectious patients? How do you tell a mother that her healthy young son has died, only days after falling ill? With warmth, honesty and humour, this book is a gripping, moving testament to the everyday heroism of the NHS staff in a global crisis, and an unforgettable insight into what was really happening in the wards as we clapped on our doorsteps.

Not Tonight Joanna Kempner 2014-10-08 Migraine is an extraordinarily common, disabling, and painful disorder that affects over 36 million Americans and costs the US economy at least \$32 billion per year. Nevertheless, it is frequently dismissed, ignored, and delegitimised. In this book, Joanna Kempner argues that this general dismissal of migraine can be traced back to the gendered social values embedded in the way we talk about, understand, and make policies for people in pain.

Emergency Triage Kevin Mackway-Jones 2014-02-03 The Manchester Triage System (MTS) is the most widely used triage system in the UK, Europe and Australia, with tens of millions of patients being processed through hospital emergency departments. It is also used in hospitals throughout Brazil. Emergency Triage is the core text for the MTS, which utilises a risk averse system of prioritisation for patients in all unscheduled care settings. As such, it is an essential text for all emergency department staff using the MTS, in particular triage nurses. The book is both a training tool and a reference for daily use in the Emergency Department and prehospital settings. This edition features revised protocols that reflect new approaches to prioritisation, with accompanying revised flowcharts - the core part of the book. treatment of several neglected tropical diseases, such as visceral leishmaniasis and Buruli ulcer. New recommendations for screening and treating of cervical pre-cancer lesions in women living with HIV are also addressed in this chapter. Guidance on service delivery was expanded to help the implementation and strengthening the HIV care cascade. Importantly, this guidance emphasizes the need for differentiated approaches to care for people who are established on ART, such as reduced frequency of clinic visits, use of multi-month drug dispensing and implementation of community ART distribution. The adoption of these efficiencies is essential to improve the quality of care of people receiving treatment and reduce the burden on health facilities, particularly in resource limited settings.

COVID-19 Aurelie Fabre 2021-12-01 The story of COVID-19 now seems so familiar: from the first reported case of a new respiratory infection in China in December 2019, to a pandemic that rapidly changed the world. Respiratory clinicians and scientists were at the forefront of delivering healthcare for people with COVID-19, leading efforts to understand this novel virus and disease, and developing and testing strategies to better prevent and treat it. These endeavours extended not only to the acute illness, but also to understanding the longer-term consequences. The pace of knowledge acquisition was rapid but is now maturing. This Monograph therefore provides a timely and valuable state-of-the-art summary for clinicians and scientists on our understanding of this virus and its consequences to date. It is essential reading for all those involved in the care of people who are or who have been affected by COVID-19.

Identification of Biomarkers, New Treatments, and

Vaccines for COVID-19 Paul C. Guest 2021-07-19 The novel coronavirus 2019 (COVID-19) has caused a serious global pandemic in just one year. Nearly every country and territory in the world has been affected by the virus. The virulence and infection rate of the virus are profound, and has required extreme social distancing measures across the globe in order to prevent overwhelming the healthcare services and hospitals. COVID-19 appears to have the greatest effects on elderly individuals and those who have co-morbid diseases, such as diabetes and obesity. As the cases and death rate remain high, there are justified fears of this virus remaining for several months or years to come. To address this, a rapid and unprecedented worldwide mobilization effort has begun to identify effective treatments and develop vaccines. As these begin to be deployed and administered across the globe, many now feel the virus will be brought under control and lives will eventually return to normal. This new volume will increase readers' understanding of the ongoing COVID-19 pandemic through a series of chapters that address these

concerns. Leading experts will discuss new treatment approaches, vaccine development, mental health aspects of the pandemic, and convey the results of survey studies. The book will be an excellent resource for researchers studying virology, metabolic diseases, respiratory disorders, and clinical scientists, physicians, drug companies, and healthcare services and workers.

Sleep Disorders and Sleep Deprivation Institute of Medicine 2006-10-13 Clinical practice related to sleep problems and sleep disorders has been expanding rapidly in the last few years, but scientific research is not keeping pace. Sleep apnea, insomnia, and restless legs syndrome are three examples of very common disorders for which we have little biological information. This new book cuts across a variety of medical disciplines such as neurology, pulmonology, pediatrics, internal medicine, psychiatry, psychology, otolaryngology, and nursing, as well as other medical practices with an interest in the management of sleep pathology. This area of research is not limited to very young and old patientsâ€"sleep disorders reach across all ages and ethnicities. Sleep Disorders and Sleep Deprivation presents a structured analysis that explores the following: Improving awareness among the general public and health care professionals. Increasing investment in interdisciplinary somnology and sleep medicine research training and mentoring activities. Validating and developing new and existing technologies for diagnosis and treatment. This book will be of interest to those looking to learn more about the enormous public health burden of sleep disorders and sleep deprivation and the strikingly limited capacity of the health care enterprise to identify and treat the majority of individuals suffering from sleep problems.

Building a Structured Field Within Clinical Notes in a Migraine Practice: A Quality Improvement Project Angel Leonel Moreno
2020 Background: Documentation practices in an outpatient migraine clinic describe migraine and headache days (MHD) experienced per month in narrative form within an electronic health record (EHR). Narrative data is time consuming to use in clinic-based research (Meyers et al., 2018). The Model of Improvement's Plan-Study-Do-Act (PDSA) and the Chronic Care Model (CCM) guided the methodology of this QI project aiming to 1). build a structured field (SF) within an EHR clinical note, and 2). to describe the characteristics of patients who self-record and track their migraine days compared to those who do not. This work includes the first PDSA cycle. Methods: A MHD SF for the EHR clinical note was developed based on the literature review, clinical practice guidelines and informaticists consultation. Migraine clinical patients were recruited and divided into two groups based on whether they kept a record of MHD in a diary or not. Participants completed a questionnaire assessing education level, income, and marital status. A chart review then quantified

Downloaded from
legacy.opendemocracy.net
on 2020-08-18 by guest

additional characteristics including age, sex, history of migraine medication use, MHD frequency and severity, age of migraine onset, and zip code. The documented migraine data will be input into the MHD SF once the SF is built. Results: The MHD SF is currently being built. A total of 52 patients have been enrolled for the feasibility portion of the project, 28 tracked MHDs and 24 did not. Migraine characteristics and demographic data were compared between the two groups. There were no statistically significant differences between the groups ($p > 0.05$) except for the number of preventives tried, which was higher in the documented MHD group ($M = 8.89$, $SD = 5.32$) compared to the group that did not keep a diary ($M = 5.92$, $SD = 3.50$), $p=0.03$. Conclusion: The COVID-19 pandemic delayed the construction of the MHD SF. Changes in clinic dynamics and patient access changed with COVID-19 which impacted the original feasibility portion of the work involving LVNs and patients. This QI project will improve therapy evaluation and facilitate clinic-based research. The PDSA and CCM provide the project practical and conceptual structure and supports the projects sustainability.

Invasive Fungal Rhinosinusitis Gauri Mankekar 2013-10-01

Incidence of invasive fungal sinusitis has been increasing over the years. The understanding of its pathophysiology has improved with newer serological tests and diagnostic methods helping in earlier diagnosis and reducing patient morbidity. It was believed earlier that invasive fungal sinusitis is seen only in immune compromised patients but clinical reports suggest otherwise. More anti-fungal drugs are being added to improve incidence of patient survival. This book aims to compile all practical information about invasive fungal sinusitis into a single volume. Therefore, busy clinicians would not have to perform exhaustive literature studies to diagnose invasive fungal sinusitis. The book aims to provide an overview of diseases which could be mistaken for invasive fungal sinusitis and discuss how the management is different. Book sections consist of clinical, microbiological,

serological, pathological, radiological and pharmacological features of the disease and its management. Each section is important in today's context as it dynamically alters the management of the patient.
