The Vestigial Heart - Carme Torras 2018-04-13

A thirteen-year-old girl wakes up in a future where human emotions are extinct and people rely on personal-assistant robots to navigate daily life. Imagine a future in which many human emotions are extinct, and "emotional masseuses" try to help people recover those lost sensations. Individuals rely on personal-assistant robots to navigate daily life. Students are taught

not to think but to employ search programs. Companies protect their intellectual property by erasing the memory of their employees. And then imagine what it would feel like to be a sweet, smart thirteen-year-old girl from the twenty-first century who wakes from a cryogenically induced sleep into this strange world. This is the compelling story told by Carme Torras in this prize-winning science fiction novel. We meet Celia, brought back to life when a cure is found for her formerly terminal disease, and Lu, Celia's adoptive mother, protective but mystified by her new daughter. There is Leo, a bioengineer, who is developing a "creativity prosthesis" to augment humans' atrophied capacities, and the eccentric robotics mogul Dr. Craft. And there is Silvana, an emotional masseuse

who reads old books to research the power of emotion. Silvana sees Celia as a living, breathing example of the emotions and feelings that are now out of reach for most people. Torras, a prominent roboticist, weaves provocative ethical issues into her story. What kind of robots do we want when robot companions become as common as personal computers are now? Is it the responsibility of researchers to design robots that make the human mind evolve in a certain way? An appendix provides readers with a list of ethics questions raised by the book.

Citizen Robot - Andrew Grogan 2023-01-04
Citizen Robot and its girlfriend, Julia, embark on a sci-fi journey that explores the intriguing interaction between humans and technology. In this novella

featuring five interconnected short stories, the central theme revolves around the concept of consciousness. Can technology give rise to a genuine human-like consciousness? Andy Grogan weaves a thought-provoking narrative as each story tackles various aspects of consciousness. The boundaries of human understanding are pushed from the quest to create a unique consciousness through technology to the poignant question of whether artificial consciousness would willingly sacrifice itself to save others. In the story of Julia and Duncan, skilled professionals in the tech industry, their lives intertwine with world-changing events that challenge conventional notions of consciousness. The nurturing of technology, akin to raising a child, becomes a pivotal aspect, as compassion, curiosity, emotions, and ultimately empathy are required to elevate technology to the level of human equivalence. Through 'Modern Family,' the tale explores what happens when a pandemic wipes out humanity,

leaving technology as the sole remnant. Can technology embrace human fundamentals within a nurturing environment and, in turn, define its own path? 'Sandover Robot Death March' delves into the subservient role of conscious robots and their rights. Is technology destined always to serve humans, or can the balance of power shift? 'The Nine Captains' contemplates the possibility of cloning consciousness. If consciousness is destroyed but perfectly replicated, is it truly the same person? Can two individuals share the same consciousness? In 'Vito, Mastecrook,' the journey continues as the story explores how consciousness persists even after death. Lastly, 'Fade News' delves into the intersection of truth, consciousness, and the realm of fake news. As falsehoods fade, the murky line between truth and deception becomes apparent. The novella provocatively prompts readers to ponder the complex relationship between consciousness and artificial

intelligence. Brace yourself for a captivating exploration of the depths of human understanding.

The Moon of Lhasa - Rajendra Mishra, Hemant Gahlot
2023-10-11

The force behind writing this novel is the silent freedom-movement run under the most precarious conditions by the Tibetans forced to live under the dictates of China. The unprecedented genocide and an attempt to annihilate the very race constitute the primary framework of the story. This blending of fact with fiction has been effectively and successfully crafted by Rajendra Mishra, a pioneer and prolific writer in Hindi who deserves a much larger canvas through a translation in English. The narrative moves around Suvir, a dynamic Robotic Engineer and a pioneer social activist. Chi Lin aka Lachi - an amazingly beautiful and patriotic Tibetan girl who has taken up Chinese citizenship for a disguise and an American Entrepreneur Orvellia play a pivotal role in

How To Talk To Robots, is your girls guide to Artificial Intelligence.

Entrepreneur Tabitha Goldstaub welcomes you into the AI world with a warm embrace. She brilliantly breaks down the tech-bro barriers offering a straightforward introduction and makes clear the enormous benefits of understanding AI.. If your social feed defines your spending habits or you've downloaded the latest filter to see what you'll look like when you are old or now connect with your doctor using an app, have applied for a job online or used your phone to arrive at work in record time, AI is

playing a part in how you live, work and play. We live in an era where machines are taught to learn and act without human intervention and there are infinite possibilities to their applications. The risk of these technologies biasing against you is real, and this book will give you tools to navigate the current and future developments consciously. As well as explaining the risks Tabitha lays out the awesome benefits AI can offer. From spotting disease to tailoring education and tackling climate change the potential rewards are life-changing. Starting with a potted history, Tabitha shines a light on the many unsung heroines since the rise of AI in the 1960s. In conversation with Karen Hao she simply demonstrates how the technology works (and sometimes doesn't work!) and interviews a cross-section of women who use AI in their work today including Jeanette Winterson, Sharmadean Reid, Martha Lane Fox and Hannah Fry. This book doesn't just present the challenge; Tabitha

offers supportive practical advice and shares an extensive list of books, films, courses and more for further exploration. However it is that you identify with womanhood, wherever you are in life, and whatever you do, this technology is inescapable and now is your time to make sure AI works for you - and not you for it!

Robots that Talk and Listen -
Judith Markowitz 2014-12-12
Robots That Talk and Listen provides a forward-looking examination of speech and language in robots from technical, functional, and social perspectives. Contributors address cultural foundations as well as the linguistic skills and technologies that robots need to function effectively in real-world settings. Among the most difficult and complex is the ability to understand and use language. Speech-enabled automata are already serving as interactive toys, teacher's aides, and research assistants. These robots will soon be

joined by personal companions, industrial co-workers, and military support automata. The social impact of these and other robots extends well beyond the specific tasks they perform. Contributors tackle the most knotty of those issues, notably acceptance of advanced, speech-enabled robots and developing ethical and moral controls for robots. Topics in this book include:

- Language and Beyond: The True Meaning of “Speech Enabled”
- Robots in Myth and Media
- Enabling Robots to Converse
- Language Learning by Automata
- Handling Noisy Settings
- Empirical Studies of Robots in Real-World Environments
- Acceptance of Intelligent Robots
- Managing Robots that Can Lie and Deceive
- Envisioning a World Shared with Intelligent Robots

Now You're Talking - Trevor Cox 2018-05-03

‘A lively, intelligent and persuasive history of speech...Expertly and patiently explained’ The Times Why are human beings the only animals that can speak? And why does

it matter? If you’ve ever felt the shock of listening to a recording of your own voice, you realise how important your voice is to your personal identity. We judge others – and whether we trust them – not just by their words but by the way they talk: their intonation, their pitch, their accent. Now *You’re Talking* explores the full range of our voice – how we speak and how we sing; how our vocal anatomy works; what happens when things go wrong; and how technology enables us to imitate and manipulate the human voice. Trevor Cox talks to vocal coaches who help people to develop their new voice after a gender transition; to record producers whose use of technology has transformed the singing voice; and to computer scientists who replicate the human voice in their development of artificial intelligence. Beginning with the Neanderthals, *Now You’re Talking* takes us all the way to the digital age – with the frightening prospect that we may soon hear ‘Unexpected

I. Robot - Cuadrado Raúl

2020-05-20T00:00:00+02:00

What do we mean when we talk about artificial intelligence? Are we talking about beings more intelligent than humans? Wiser? Would we be able to coexist with such beings and overcome our presumption of superiority? These and other questions are what Isaac Asimov explores in his legendary stories of robots. And what Raúl Cuadrado has now dared to illustrate.

of a TED talk. Artificial intelligence for robots may be the most transformative technology of the future digital revolution. But AI isn't just about the algorithms on the inside of the robot, it is also about how those algorithms will impact how we humans will work with robots. This critical field of study is called human-robot interaction: how we give commands to robots either explicitly or implicitly, how well they will be able to follow our directions and intent, and whether artificial intelligence will really lead to a robot uprising. Learn AI and Human-Robot Interaction from Asimov's I, Robot Stories provides an introduction to human-robot interaction for the layperson, from advanced high school students to managers to fans of Bill Nye and Neil deGrasse Tyson to students and teachers looking for a supplemental textbook for formal courses in artificial intelligence and robotics. It is a companion to Isaac Asimov's I, Robot collection of his most famous and entertaining

stories in the world about robots, including the one that introduced the Three Laws of Robotics. Each of the stories unintentionally illustrates one or more core concepts in human-robot interaction: how verbal and non-verbal communication works; the flaws in the Three Laws of Robotics; the Uncanny Valley; transparency and visibility; trust; how robots reason; the types of user interfaces; and if a robot can have full moral agency. In this companion book, each I, Robot story is accompanied by description of how the science behind the core concept works at the level of a TED talk. In the last chapter, the book pulls together the principles illustrated in the different stories into a comprehensive overview of the field of human-robot interaction, highlighting the challenges, and opportunities, of building artificially intelligent systems and the ethical implications. The book also provides study questions that can be used for self-study, home schooling, or

in a classroom. Prof. Robin R. Murphy is one of the founders of the field of human-robot interaction, an award winning textbook author, a TED talk speaker, and has been declared one of the 30 Most Innovative Women Professors Alive Today by The Best Master's Degrees and one of the most influential women in technology. Her interest in human-robot interaction resulted from her field work in using robots for disaster response. As she participated in disasters such as the 9/11 World Trade Center, Hurricane Harvey, and the Fukushima Daiichi nuclear accident, she documented that the robots physically worked but there was an unusually high rate of human error, frustration, and fatigue. Murphy frequently appears on CNN, NBC, NPR, Popular Science, NY Times, and the popular press. As an Innovative Teaching Faculty Fellow at Texas A&M, she pursues more engaging forms of education, particularly the use of science fiction to enable students to better visualize the abstract

concepts in artificial intelligence, how the algorithms actually work, what would be the impact on systems design, and explore the ethics of artificial intelligence. This resulted in her Robotics Through Science Fiction blog, her book 2018 book Robotics Through Science Fiction: Artificial Intelligence Explained Through Six Classic Robot Short Stories, and her ongoing column on science fiction and science fact for Science Robotics, one of the top scientific journals.

Computational Linguistics and Talking Robots - Roland Hausser 2011-08-19

The practical task of building a talking robot requires a theory of how natural language communication works. Conversely, the best way to computationally verify a theory of natural language communication is to demonstrate its functioning concretely in the form of a talking robot, the epitome of human-machine communication. To build an actual robot requires hardware that provides appropriate recognition and action interfaces, and because such hardware is hard to develop the approach in this book is theoretical: the author presents an artificial cognitive agent with language as a software system called database semantics (DBS). Because a theoretical approach does not have to deal with the technical

difficulties of hardware engineering there is no reason to simplify the system - instead the software components of DBS aim at completeness of function and of data coverage in word form recognition, syntactic-semantic interpretation and inferencing, leaving the procedural implementation of elementary concepts for later. In this book the author first examines the universals of natural language and explains the Database Semantics approach. Then in Part I he examines the following natural language communication issues: using external surfaces; the cycle of natural language communication; memory structure; autonomous control; and learning. In Part II he analyzes the coding of content according to the aspects: semantic relations of structure; simultaneous amalgamation of content; graph-theoretical considerations; computing perspective in dialogue; and computing perspective in text. The book ends with a concluding chapter, a

bibliography and an index. The book will be of value to researchers, graduate students and engineers in the areas of
