Resources for Teaching Elementary School Science - National Science Resources Center of the National Academy of Sciences and the Smithsonian Institution 1996-04-28

What activities might a teacher use to help children explore the life cycle of butterflies? What does a science teacher need to conduct a "leaf safari" for students? Where can children safely enjoy hands-on experience with life in an estuary? Selecting resources to teach elementary school science can be confusing and difficult, but few decisions have greater impact on the effectiveness of science teaching. Educators will find a wealth of information and expert guidance to meet this need in *Resources for Teaching Elementary School Science*. A completely revised edition of the best-selling resource guide *Science for Children: Resources for Teachers*, this new book is an annotated guide to hands-on, inquiry-centered curriculum materials and sources of help in teaching science from kindergarten through sixth grade. (Companion volumes for middle and high school are planned.) The guide annotates about 350 curriculum packages, describing the activities involved and what students learn. Each annotation lists recommended grade levels, accompanying materials and kits or suggested equipment, and ordering information. These 400 entries were reviewed by both educators and scientists to ensure that they are accurate and current and offer students the opportunity to: Ask questions and find their own answers. Experiment productively. Develop patience, persistence, and confidence in their own ability to solve real problems. The entries in the curriculum section are grouped by scientific area—"Life Science, Earth Science, Physical Science, and Multidisciplinary and Applied Science"—and by type—"core materials, supplementary materials, and science activity books. Additionally, a section of references for teachers provides annotated listings of books about science and teaching, directories and guides to science trade books, and magazines that will help teachers enhance their students' science education. *Resources for Teaching Elementary School Science* also lists by region and state about 600 science centers, museums, and zoos where teachers can take students for interactive science experiences. Annotations highlight almost 300 facilities that make significant efforts to help teachers. Another section describes more than 100 organizations from which teachers can obtain more resources. And a section on publishers and suppliers give names and addresses of sources for materials. The guide will be invaluable to teachers, principals, administrators, teacher trainers, science curriculum specialists, and advocates of hands-on science teaching, and it will be of interest to parent-teacher organizations and parents.

National Geographic - 1998

WORLD HISTORY, JOURNEYS - Candice Goucher 2013-09-13

Using a thematic approach, this innovative textbook explores the history of the world, from its earliest prehistory to the present age of globalization.

Wild at Heart - Peter Godwin 2002

Reprising the years-long, in-depth collaboration that produced much of "National Geographic" magazine's coverage of southern Africa, award-winning photographer Chris Johns and veteran foreign correspondent Peter Godwin reveal majestic southern Africa as defined by the entangled relationships among its wildlife, peoples, and geography. 128 full-color photos.

[Wildlife Stewardship on Tribal Lands](#) - Serra J. Hoagland 2023-05-23

This groundbreaking book brings together Native American and Indigenous scholars, wildlife managers, legal experts, and conservationists from dozens of tribes to share their wildlife stewardship philosophies, histories, principles, and practices. Tribes have jurisdiction over some of the healthiest wild areas in North America, collectively managing over 56 million acres of land. This is no accident: in addition to a deep reverence for the land and a strong history of environmental stewardship, Native peoples implement some of the best fish and wildlife preservation and management practices on the continent. *Wildlife Stewardship on Tribal Lands* is the first comprehensive resource dedicated to the voices and expertise of Native scholars and wildlife professionals. In its pages, nearly one hundred Native and non-native wildlife conservationists, managers, and their collaborators share lessons to guide wildlife professionals in how best to incorporate

native methods and how to work effectively with tribal stakeholders. The authors cover topics that include:

- Guidelines for conducting research on tribal lands
- Traditional ecological knowledge-based management models
- The cultural and ecological importance of key species
- Legal battles for treaty rights, management authority, and funding
- First foods and food sovereignty
- Fisheries and migratory bird management
- Tribal perspectives on the Endangered Species Act
- A history of modern fish and wildlife management on tribal lands

The content of this book is not limited to the invaluable reports of research findings, explications of methodologies, and case studies. Capturing oral histories and spiritual knowledge through interviews with tribal leaders and the work of Native artists and writers honors the holistic awareness of the land offered to readers of this unique volume. Ultimately, the contributors to *Wildlife Stewardship on Tribal Lands* demonstrate how tribal practices are pivotal guideposts for those seeking to protect and harness our natural resources in ways that can help reverse grievous biodiversity losses and ensure the health of our environment for future generations. Contributors: Scott Aikin, Steven Albert, John Antonio, Dale Becker, Bethany Berger, Kimberly Blaeser, Arthur Blazer, Michael Blumm, Michael Brydger, Ashley Carlisle, Frank Cerno Jr., Sally Carufel Williams, Guy Charlton, Samuel Chischilly, Bob Christensen, Gerald Cobell, Cody Desautel, Lauren Divine, Douglas W. Indigenous Knowledge, Ecology, and Evolutionary Biology - Raymond Pierotti 2010-09-10

Indigenous ways of understanding and interacting with the natural world are characterized as Traditional Ecological Knowledge (TEK), which derives from emphasizing relationships and connections among species. This book examines TEK and its strengths in relation to Western ecological knowledge and evolutionary philosophy. Pierotti takes a look at the scientific basis of this approach, focusing on different concepts of communities and connections among living entities, the importance of understanding the meaning of relatedness in both spiritual and biological creation, and a careful comparison with evolutionary ecology. The text examines the themes and principles informing this knowledge, and offers a look at the complexities of conducting research from an indigenous perspective.

Ecological Restoration and Environmental Change - Stuart K. Allison 2023-08-24

Ecological Restoration and Environmental Change presents an introduction to the practice of renewing and restoring degraded, damaged, or destroyed ecosystems and habitats in the environment. The book addresses and challenges key issues which question the core values of the science and practice of restoration ecology. The author explains that the process of restoration has always been defined by human

choices and examines the development of restoration practice, to describe different models of restoration with respect to balancing ecological benefit and cultural value. He develops ways to balance more actively these differing areas of concern while planning restorations. This new edition has been fully revised and updated to reflect changes in the field and the new challenges posed to restoration ecology in the face of the rapid pace of climate change. With strong coverage of North and South American, Europe, and Australia, this new edition has been expanded to also address indigenous perspectives and restoration projects in Africa, the Pacific Islands, and Asia. It places special emphasis on the need for restorationists to appreciate and understand the intricacies of planning and managing restorations in novel ecosystems. Lastly, it provides a critique of the new restoration standards published by the Society for Ecological Restoration in 2019. This book is essential reading for students on restoration ecology and conservation courses, as well as professionals and practitioners working on restoration projects.

Methods and Approaches in Forest History - Mauro Agnoletti 2000

A companion to *Forest History: International Studies on Socioeconomic and Forest Ecosystem Change* which includes over 20 papers from the same conference held in Florence in 1998. This volume focuses on the different approaches and methods adopted in the study of forest history. The interdisciplinary nature of these studies is emphasized, bringing in the different perspectives of anthropologists, botanists, ecologists, foresters, historians, geneticists and geographers. This volume demonstrates the rich diversity of approaches and methods to forest history.
