Textbook of Clinical Embryology - Kevin Coward 2013-10-31

The success of Assisted Reproductive Technology is critically dependent upon the use of well optimized protocols, based upon sound scientific reasoning, empirical observations and evidence of clinical efficacy. Recently, the treatment of infertility has experienced a revolution, with the routine adoption of increasingly specialized molecular biological techniques and advanced methods for the manipulation of gametes and embryos. This textbook – inspired by the postgraduate degree program at the University of Oxford – guides students through the multidisciplinary syllabus essential to ART laboratory practice, from basic culture techniques and micromanipulation to laboratory management and quality assurance, and from endocrinology to molecular biology and research methods. Written for all levels of IVF practitioners, reproductive biologists and technologists involved in human reproductive science, it can be used as a reference manual for all IVF labs and as a textbook by undergraduates, advanced students, scientists and professionals involved in gamete, embryo or stem cell biology.

Androgen Excess Disorders in Women - Ricardo Azziz 2007-11-08

The field of androgen excess disorders has advanced substantially since the original publication of this book. The Androgen Excess Society (AES) was founded to bring together investigators in the field. A better understanding of the screening, progression, and molecular genetics of nonclassic adrenal hyperplasia (NCAH) has improved the clinical care and diagnostic accuracy of these patients. New criteria for the diagnosis of the polycystic ovary syndrome (PCOS) were proposed in Rotterdam, criteria that have resulted in controversy and, hopefully, initiation of new studies. The association of insulin resistance with PCOS has been strengthened, and the role of metformin in treating the infertility of the PCOS has been validated. Risks for diabetes and, more controversially, cardiovascular disease in women with PCOS have received substantial investigation. Our understanding of the epidemiology and economic impact of these disorders has expanded, emphasizing their critical importance. These are but a few highlights of how the terrain has changed in a relatively brief period of time. In keeping with these advances, the title of this book has been revised to reflect the growing importance of PCOS as the most prevalent androgen excess disorder in women, and arguably, as the one that might have the most serious adverse consequences for general health. There are fewer chapters to provide a more focused elucidation of the area. Several chapters were penned by new (and young) authors who are conducting cutting-edge research in the field.

Assessment and Management of Hepatobiliary Disease - Lajos

Okolicsanyi 2012-12-06

The contributions to this volume cover all aspects of the assessment and management of hepatobiliary disease. The focal points of the book consist of three state-of-the-art summaries. The first of these deals with the highly topical problem of liver transplants from the point of view of patient selection. The second considers drug-induced liver injury in view of the fact that the liver is the main metabolic site for a number of drugs. The final summary deals with liver and aging: it asks whether the liver follows the aging process of the host organisms and whether the liver of aged liver transplant candidate donors could be suitable for grafting. Aside from these topics, the volume presents basic research on hepatic transport mechanisms, intrahepatic cholestasis and gall-stone disease, which serves as a background for the topics more specifically concerning the assessment of liver function. Much of the book is then devoted to the management of the commonest forms of liver diseases and their complications, such as chronic active hepatitis, liver cirrhosis, portal hypertension, hepatic encephalopathy, hepatorenal syndrome, and ascites.

The Virility Factor - Robert Bahr 1992

The first up-to-date book for the laymen on testosterone.

Hyperandrogenism in Women - R. Pasquali 2019-09-09

Hyperandrogenism profoundly affects women's lives from lowering self-esteem to changing cognition and affective motivation. The polycystic ovary syndrome (PCOS) is the most common androgen excess disorder worldwide. While it is not the focus of this book, some aspects are discussed. The aim of this book is to improve understanding of androgen excess and its impact on several conditions. Topics include development of adipose tissue in females, insulin sensitivity, congenital adrenal hyperplasia, and Cushing's disease/syndrome. There is also a discussion of PCOS with emphasis on in utero origins and specific genetic and epigenetic factors. This book provides a wealth of relevant information for every endocrinologist and gynecologist who wants to broaden their knowledge of androgens in various conditions.

Trends in Oral Contraception - R.F. Harrison 2013-11-08

After 20 years of oral contraceptive (OC) use, epidemiological data and scientific research have led to the now accepted evidence that the most important effect produced by these drugs on humans, other than the prevention of unwanted pregnancy, is an increase in the risk of cardiovascular disease. Because the incidence of cardiovascular disease is also related to disturbances of the lipoprotein metabolism, it appears to be opportune to analyse the different aspects of the interaction between female hormones and lipoprotein (LP) metabolism. SERUM LIPOPROTEINS: METABOLISM In the serum, lipids (cholesterol (C), triglycerides (TG), and phospho lipids) are associated with peptides

called apoproteins: apoproteins A-I, A-11, B, C, etc. The chylomicrons and the very low density lipoproteins (VLDL) are rich in TG and contain the Apo B-48; the low density lipoproteins (LDL) are rich in C and contain the Apo B-100; and the high density lipoproteins (HDL) are rich in proteins (Apo A-I, Apo A-II) and phospholipids.

Clinical Gynecology - Eric J. Bieber 2015-04-23

It explores etiology, screening, tests, diagnosis, and treatment for a full range of gynecologic health issues. The coverage includes the full range of gynecologic malignancies, reproductive endocrinology and infertility, infectious diseases, urogynecologic problems, gynecologic concerns in children and adolescents, and surgical interventions including minimally invasive surgical procedures. Information is easy to find and absorb owing to the extensive use of full-color diagrams, algorithms, and illustrations. The new edition has been expanded to include aspects of gynecology important in international and resource-poor settings.

Male Hypogonadism - Stephen J. Winters 2003-12-12

Recent advances in cellular and molecular biology have markedly increased our understanding of normal and abnormal hypothalamic-pituitary-testicular function. Like other volumes in the Contemporary Endocrinology series, the goal of *Male Hypogonadism: Basic, Clinical, and Therapeutic Principles* is to link current knowledge of basic biology to the practice of medicine. The development of new methods for testosterone replacement has substantially increased the number of men who are seeking to determine whether they are hypogonadal, and who are using testosterone replacement therapy, thus mandating a broader understanding of testosterone deficiency. The chapters of this book were contributed by authors from around the world, and from various scientific and clinical disciplines, who have devoted their careers to the study of the physiology and pathophysiology of the male. Thus, this comprehensive and focused volume is intended for a wide audience encompassing both basic scientists and practicing clinicians. Its scope will provide a wealth of information for students and fellows as well.

Exploring Biological Risk Factors of Chronic Obstructive Pulmonary Disease - 2004

Chronic obstructive pulmonary disease (COPD) has various risk factors including old age and female sex; however, the biological reasoning behind these is not fully understood. COPD prevalence and mortality increase with age. COPD patients also seem to demonstrate pulmonary and systemic accelerated aging. When people age, repetitive sequences at their chromosomes ends, called telomeres, shorten. In COPD this may occur at an increased rate due to increased cell turnover or DNA damage, caused by inflammation and oxidative stress, and could contribute to lung function decline. Therefore, we measured telomere length in peripheral blood cells of COPD patients using qPCR and examined the relationship with lung function (FEV1 % predicted, FVC % predicted and FEV1/FVC) as well as inflammatory marker levels. We found that telomere length was positively related to FEV1/FVC and negatively related to serum SP-D level, a lung specific marker of inflammation. This supports that COPD is a disease of accelerated aging and suggests that lung inflammation may be involved in the process. Females seem to be more susceptible to developing COPD than males. A major distinction between males and females is their sex hormone levels. The lung has sex hormone receptors and there are reports of experimental animal studies and observational human studies suggesting that sex hormones have an effect on the lung. Hence, in COPD patients we measured levels of the hormones estradiol, progesterone,

testosterone, luteinizing hormone, follicle-stimulating hormone and sex hormone-binding globulin in their serum using ELISAs. The hormone levels of COPD patients fell within normal ranges and had expected relationships with age and BMI. We found a significant negative association between estradiol and FVC % predicted in males; an inverse relationship between progesterone and FVC % predicted in both sexes; and a positive relationship between LH concentration and FEV1 % predicted in females. These data support.

Sexual Attitudes and Lifestyles - Anne M Johnson 1994-03-30

The field of sexual behaviour has been notoriously neglected in social research and there has been no major survey of sexual behaviour since the Kinsey report in the late 1950s. Various social and health problems, including the AIDS epidemic and the increase in teenage pregnancies have recently underlined the need for an up to date and authoritative analysis of current sexual behaviour. *Sexual Attitudes and Lifestyles* is the result of a major statistical survey of the sexual behaviours and attitudes of 20,000 UK citizens, collected by written questionnaires and face to face interviews. It is the most comprehensive and up to date source of information on human sexual behaviour available and the first official UK-based resource ever published.

Androgens and the Aging Male - B.J. Oddens 1996-11-15

While menopause in women is a well-established and well documented phenomenon, the andropause in men is a relatively new concept. The terms male menopause and andropause suggest that this is an abrupt phenomenon related to a sudden deprivation of sex hormones. Unlike the menopause, which has a relatively sudden onset, the andropause appears to be a gradual process. It has been hypothesized that an androgen deficiency might develop with aging. *Androgens and the Aging Male* explores this hypothesis. The book focuses on the gradually progressive problems related to the decline in androgens that can occur with advancement of age. It examines the debate about the extent to which an age-dependent decline in androgens leads to health problems that affect or impair the quality of life, and the theory behind it. In addition, it reviews studies evaluating the effects of androgen supplementation. *Androgens and the Aging Male* comprehensively covers androgen function and how it changes over time.

The Effects of Diet and Exercise on Insulin, Sex Hormone Binding Globulin and Serum Lipids - Sheva Beth Tessler 1995

Advances in Research and Applications - Gerald Litwack 2000-01-27

Under the capable and qualified editorial leadership of Dr. Gerald Litwack, *Vitamins and Hormones* continues to publish cutting-edge reviews of interest to endocrinologists, biochemists, nutritionists, pharmacologists, cell biologists, and molecular biologists. First published in 1943, *Vitamins and Hormones* is the longest-running serial published by Academic Press. In the early days of the Serial, the subjects of vitamins and hormones were quite distinct. Now, new discoveries have proved that several of the vitamins function as hormones and many of the substances inferred by the title of the serial function in signal transduction processes. Accordingly, the Editor-in-Chief has expanded the scope of the serial to reflect this newer understanding of function-structure relationships in cellular communication. The Editorial Board now reflects expertise in the field of hormone action, vitamin action, X-ray crystal structure, physiology, and enzyme mechanisms.

Hormones, Cognition and Dementia - Eef Hogervorst 2009-09-24

A decade ago, oestrogen-containing hormone therapy was viewed as a promising strategy for the prevention and treatment of dementia and age-related cognitive decline. However, treatment trials in women with Alzheimer's disease showed that oestrogens did not reverse cognitive impairment, and clinical trials in healthy older women indicated that oestrogens did not prevent cognitive decline. The Women's Health Initiative Memory Study trial even suggested an increased risk of dementia with treatment late in life. What happened? How are we to understand these findings? What are the implications for middle-aged and older women? What about testosterone, and what about men? And where do we go from here? This book brings together world-renowned experts in basic and clinical research on sex steroids, aging, and cognition to integrate existing findings with emerging new data, and offer challenging hypotheses on these key issues.

Assessing for Ovulation in Transmasculine Individuals on Testosterone - Rebecca L. Taub 2019

Importance: An estimated 1.4 million people in the United States identify

as transgender or non-binary (TNB), signifying that their gender identity does not correspond with their assigned birth sex. Individuals assigned female at birth may seek gender-affirming hormone therapy with injectable testosterone. No studies have directly examined ovulatory function or contraceptive need in transmasculine individuals on testosterone. Objective: Our objective was to determine whether testosterone reliably suppresses ovulation in transmasculine individuals, and to use this and existing data to perform an assessment of unmet need for contraception in this population. Methods: This is an observational prospective trial based at a community clinic serving over 400 patients annually for gender affirming hormone therapy. We enrolled individuals who were assigned female at birth and are currently using or seeking to initiate masculinizing therapy with testosterone (transmasculine individuals). Over a 12-week study period, subjects collected daily urine samples for pregnanediol-3-glucuronide (PdG) testing and completed daily electronic bleeding diaries. We collected monthly serum samples for mid-dosing interval serum testosterone, estradiol and sex-hormone binding globulin (SHBG) levels, and anti-müllerian hormone (AMH) values at baseline and study end. Ovulation was defined as PdG > 5 [micro]g/mL for three consecutive days. We then used these data and the existing literature on fertility and family planning in this population to perform an assessment of unmet need for contraception. Main Outcomes and Measures: Our primary outcome was the proportion of participants who ovulated during the study period. Secondary outcomes included predictors of ovulation such as age, length of time on testosterone, serum testosterone levels, body mass index (BMI), and bleeding pattern. Results: We enrolled 32 individuals and 20

completed the entire study. Median age was 23 (range 18-37). Six participants were new initiators of testosterone and 14 were continuing users. Among continuing users, median duration of testosterone therapy was 9 months (range 2-60 months). One participant-month of ovulation was observed using the standard criteria, however several other participants had transient rises in PdG followed by bleeding episodes suggestive of a dysfunctional ovulatory pattern. Significant research gaps exist in assessing for unmet need for contraception in the transmasculine population. Conclusions and Relevance: This study suggests that testosterone rapidly induces ovulatory dysfunction leading to eventual ovulatory suppression, though intermittent ovulations may be possible even in long-term users. Contraceptive need is largely unrecognized in this community, and more data are needed.

Hormones, Metabolism and the Benefits of Exercise - Bruce Spiegelman 2018-03-07

The world is faced with an epidemic of metabolic diseases such as obesity and type 2 diabetes. This is due to changes in dietary habits and the decrease in physical activity. Exercise is usually part of the prescription, the first line of defense, to prevent or treat metabolic disorders. However, we are still learning how and why exercise provides metabolic benefits in human health. This open access volume focuses on the cellular and molecular pathways that link exercise, muscle biology, hormones and metabolism. This will include novel "myokines" that might act as new therapeutic agents in the future.
