Exploring the Biological Contributions to Human Health Institute of Medicine 2001-07-02 It's obvious why only men develop prostate cancer and why only women get ovarian cancer. But it is not obvious why women are more likely to recover language ability after a stroke than men or why women are more apt to develop autoimmune diseases such as lupus. Sex differences in health throughout the lifespan have been documented. Exploring the Biological Contributions to Human Health begins to snap the pieces of the puzzle into place so that this knowledge can be used to improve health for both sexes. From behavior and cognition to metabolism and response to chemicals and infectious organisms, this book explores the health impact of sex (being male or female, according to reproductive organs and chromosomes) and gender (one's sense of self as male or female in society). Exploring the Biological Contributions to Human Health discusses basic biochemical differences in the cells of males and females and health variability between the sexes from conception throughout life. The book identifies key research needs and opportunities and addresses barriers to research. Exploring the Biological Contributions to Human Health will be important to health policy makers, basic, applied, and clinical researchers, educators, providers, and journalists-while being very accessible to interested lay readers.

Nowadays the best exams are supposed to be those having Multiple Choice Questions i.e. MCQ's as integral part because of two important reasons, First easy to conduct & uniform evaluation for all students, that is no bias, Second MCQ's checks memory/recall memory/ reasoning & ability to be precise in terms of reading /understanding and speed with ability to record answers with accuracy too. The book on this subject "Exam Success Review ANATOMY MCQ's- Volume-4, Embryology & Histology for Medical Students - MBBS 1st Prof & PG Entrance" will be helpful as a companion for fast revision during examination and will help them certainly to secure full marks in the Multiple Choice Questions in examination. I must let you know that MCQ's make about 20% to 40% of total marks in the 1st prof. MBBS exam and anybody who knows the concepts and art to answer the MCQ's is going to be winner not only at MBBS level but also at various Postgraduate entrance Examinations at national & state level to get the PG Course of their choices.

Menopause Lynnette Leidy Sievert 2006-07-24 Menopause is a biological reality for all women in their forties and fifties. Yet the way we think about the cessation of menstruation is influenced by a variety of factors. Cultural and technological influences combine with biology to transform this universal phenomenon into an experience that varies considerably between cultures and individuals. In this concise book, Lynnette Leidy Sievert draws on her own case studies from Puebla, Mexico, and western Massachusetts, as well as on comparative data from other studies in places such as Slovenia, Paraguay, and Hawaii, to explore the different ways that women experience menopause around the world. Sievert suggests that attempts by medical professionals to define the "normal" occurrence of menopause, including its typical onset and symptoms, may not be realistic when considering how lifestyle, nutrition, and workload can contribute to diverging realities. She explores how women feel about hysterectomies, chemotherapy, and other medical procedures and treatments that stop menstruation prematurely. She also considers recent advances in technology, including post-menopausal birth, which have turned what was previously an unavoidable end of fertility into something that can be postponed. A unique comparative look at women's experiences, this text brings new perspectives to the mainstream literature on the subject and invites readers to consider compelling questions about menopause, its meanings, and its future.

Menopause Juan Francisco Rodríguez-Landa 2017-08-16 Menopause is a natural state of development in women, but it is also a period of vulnerability to the development of several disorders, such as vasomotor symptoms, hot flashes, vaginal dryness, osteoporosis, cognitive deterioration, depression, and anxiety. Factors as diverse as culture, diet, exercise, maternity, age, and genetics can influence the severity of symptoms that are experienced during menopause and can modify the response to diverse therapies. Studying menopause from a multidisciplinary perspective will help elucidate the different factors that affect health during this specific stage of a woman's life. This book presents several aspects of menopause, including its evolutionary origins, novel nonhormonal therapies, and the neurobiology of related disorders.

Characterization in the Little Skate, *Leucoraja Erinacea*, of Conserved Sex Determination Genes Joseph St. George 2006 Abstract: The control of sex

determination and gonadal differentiation, although extensively studied, is not well understood. The mechanisms leading to assignment and development of sex and sexual characteristics consist of levels of genetic signaling, frequently with multiple genes working in concert to influence the final outcome. In these studies, cloning methods were used to identify conserved cDNAs in the sex determination pathway from a species which has evolved over 250 million years, the little skate *Leucoraja erinacea*. As a primitive gnathostome, a broader understanding of the sex determination pathway in these animals may lead to improved understanding of the process in vertebrates, and yield an evolutionary link between the invertebrate and vertebrate phyla. Five genes involved in sex determination and gonadal differentiation in higher vertebrates were identified and characterized from the little skate. Homologs to *vasa*, a germ cell marker, *gata6* an early gonadal development gene, and three *sox* genes (*sox6*, *sox17*, and *sox30*) that are involved in testis function were elucidated and patterns of expression determined. The *vasa* homolog was found in adult and embryonic gonads and embryonic yolk sac. Expression of *vasa* in the yolk sac decreased as germ cells moved into the gonads from the yolk sac, following which expression in embryonic gonads was seen. The *gata6* homolog was found in most tissues, but the highest level of expression was in the gonads. The expression patterns of the *sox* genes were similar to expression patterns in other organisms, suggesting that at least some of the genes involved in sex differentiation were established early in vertebrate evolution. Homology modeling of conserved protein motifs showed conservation of putative protein structure, suggesting conservation of protein function. Homologs to the all five genes studied are reported in both invertebrate and vertebrate species, with conservation of structure and in many cases function, suggesting that key processes of sex differentiation are conserved throughout the animal kingdom. The use of these and other molecular markers of sex to classify embryos under different experimental conditions may lead to better understanding of the interaction of internal developmental regulators in this and other species.

Pediatric Germ Cell Tumors A. Lindsay Frazier 2013-10-28 Germ cell tumors are relatively rare compared with other malignancies, and compilations of knowledge that encompass the entire spectrum of the disease are lacking. This textbook, written by the foremost authorities in the field, rectifies the situation by discussing in depth a broad range of topics, including biology, epidemiology, pathology, treatment, and late effects. Bearing in mind that germ cell tumors are most prevalent in the adolescent and young adult age group, causes of disease and treatment approaches in pediatric and adult patients are compared and contrasted. By spanning the entire life course, from prenatal origins of disease through to treatment in adults and late effects of treatment, the editors have produced a book that will be of interest to both pediatric and adult oncologists.

The First Twelve Weeks of Gestation E.R. Barnea 2012-12-06 Leading workers in the field of human reproduction provide both basic knowledge and useful practical information in this book about the most critical phase in the development of a new human being: the first twelve weeks of life. The period from fertilization and implantation to the end of the first trimester is still insufficiently understood and marks a new frontier. The knowledge necessary for applying our present diagnostic capabilities and for venturing into the problematic areas of fertilization technology and embryonic treatment is made easily available in this comprehensive textbook. The book is divided into two parts. The first presents basic information about physiology, anatomy, in vivo investigations, biochemistry and legal aspects. The second part focuses on pregnancy development, monitoring and the clinical diagnosis and management of disorders in the early stages of life. A full section is devoted to assisted conception and the newest possibilities in fertilization technologies, whereby the ethical aspects are also discussed.

Cancer in Children P.A. Voute 2012-12-06 Cancer in Children is the first volume in this new series, sponsored by the DICC, on the treatment of cancer. The editors and authors feel strongly that more standardization is needed on a worldwide basis in cancer therapy. This, of course, is only possible if experts from all countries subscribe to a joint policy of making their treatment designs available to practising oncologists all over the world. Current Treatment of Cancer will discuss all the equipment and methods now in use in cancer therapy. It will cover all types of cancer, thus providing the reader with comprehensive information on cancer management. The appearance of a book on paediatric oncology as the first in the series is intentional: in recent decades there has been a tremendous improvement in the treatment of cancer in children, and there is hope for even further success in this fight. We are convinced that this book and the series it is introducing will help us to make a concerted response to the challenge of cancer.
