Regulating Decision-Making in Multiple Pregnancy - Jeffrey Wale
2021-06-22

This book examines the regulation and practice of medical decision-making where the context is that of a multiple pregnancy and where the question is whether or not to carry out a fetal reduction procedure. It concerns three main lines of inquiry: first, the nature of fetal reduction and the legal ground(s) for termination typically relied upon; secondly, the extent to which legal, ethical, and professional norms guide or constrain this particular kind of decision-making; and, thirdly, the adequacy of these norms. The book uses empirical sources to develop its analysis, contributing new insight and the kind of evidence necessary to shape regulation, clinical practice, and future research. The key findings show that fetal abnormality is often given as the justifying ground; that the legal, ethical, and professional norms offer little explicit guidance for fetal reduction: and on the general question of termination, ethical norms suffer from a high level of contestation, the key norms in the UK abortion legislation are unclear and disconnected from practice, and professional norms are only marginally more adequate. Given the indeterminacy of these norms, it is no surprise that the evidence indicates that doctors are only weakly guided by them in making their decisions. Various recommendations are advanced in this book, including the need for a situational emphasis on shared decision-making and patient-centred care.

Chinese Professionals and the Republican State - Xiaoqun Xu
2000-12-04

Xiaoqun Xu makes a compelling and original contribution to the study of China's modernization with this book on the rise of professional associations in Republican China in their birthplace of Shanghai, and of their political and socio-cultural milieu. This 2001 book is rich in detail about the key professional and political figures and organizations in Shanghai, filling an important gap in its social history. The professional associations were, as the author writes, 'unambiguously urban and

modern in their origins and functions ... representing a new breed of educated Chinese' and they pioneered a new type of relationship with the state. Xu addresses a central issue in China studies, the relationship between state and society, and proposes an alternative to the Western-derived concept of civil society. This book illuminates the complexity of modernization and nationalism in twentieth-century China, and provides a concrete case for comparative studies of professionalization and class formation across cultures.

The Global Collaboration against Transnational Corruption - Lianlian Liu 2018-09-18

This book articulates and explores the realities of contemporary international anti-corruption law. As corruption has increasingly become a major topic in international affairs, Liu analyzes the global collaboration against transnational bribery. As China's economic reforms are increasingly articulated in a language of law, governmentality, and anti-corruption, it is essential that scholars, policymakers and legal theorists around the world understand the issues at stake. In this elegant text, Liu lays out the issues clearly, establishes methodologies for analysis, and provides policy proposals for the years to come.

Monsters, Law, Crime - Caroline Joan "Kay" S. Picart 2020-11-18

Monsters, Law, Crime, an edited collection composed of essays written by prominent U.S. and international experts in Law, Criminology, Sociology, Anthropology, Communication and Film, constitutes a rigorous attempt to explore fertile interdisciplinary inquiries into "monsters" and "monster-talk," and law and crime. This edited collection explores and updates contemporary discussions of the emergent and evolving frontiers of monster theory in relation to cutting-edge research on law and crime as extensions of a Gothic Criminology. This theoretical framework was initially developed by Caroline Joan "Kay" S. Picart, a Philosophy and Film professor turned Attorney and Law professor, and Cecil Greek, a Sociologist (Picart and Greek 2008). Picart and Greek proposed a Gothic Criminology to analyze the fertile synapses connecting the "real" and the "reel" in the flow of Gothic metaphors and narratives that abound around criminological phenomena that populate not only

popular culture but also academic and public policy discourses. Picart's edited collection adapts the framework to focus predominantly on law and the social sciences.

The Money Laundry - J. C. Sharman 2011-10-15

A generation ago not a single country had laws to counter money laundering; now, more countries have standardized anti-money laundering (AML) policies than have armed forces. In *The Money Laundry*, J. C. Sharman investigates whether AML policy works, and why it has spread so rapidly to so many states with so little in common. Sharman asserts that there are few benefits to such policies but high costs, which fall especially heavily on poor countries. Sharman tests the effectiveness of AML laws by soliciting offers for just the kind of untraceable shell companies that are expressly forbidden by global standards. In practice these are readily available, and the author had no difficulty in buying the services of such companies. After dealing with providers in countries ranging from the Seychelles and Somalia to the United States and Britain, Sharman demonstrates that it is easier to form untraceable companies in large rich states than in small poor ones; the United States is the worst offender. Despite its ineffectiveness, AML policy has spread via three paths. The Financial Action Task Force, the

key standard-setter and enforcer in this area, has successfully implemented a strategy of blacklisting to promote compliance. Publicly identified as noncompliant, targeted states suffered damage to their reputation. Subsequently, officials from poor countries became socialized within transnational policy networks. Finally, international banks began using the presence of AML policy as a proxy for general country risk. Developing states have responded by adopting this policy as a functionally useless but symbolically valuable way of reassuring powerful outsiders. Since the financial crisis of 2008, the G20 has used the successful methods of coercive policy diffusion pioneered in the AML realm as a model for other global governance initiatives.

A Symbiotic Relationship - Jeffrey N. Rule 2013

Numerous articles and books have recently appeared criticizing current leadership of the Armed Services and their collective inability to think critically, to adapt, or to innovate quickly -- as well as their lack of tactical, operational, or strategic agility. However, the services have not sat idle; their individual doctrines, educational institutions, and professional journals abound with the need to create more adaptive, agile, and thinking leaders -- and have done so for quite some time. Why have the solutions remained elusive? While the problem is surely complex, this paper will examine ways to enhance innovative thought and develop pedagogical methodologies necessary to maintain a competitive advantage for the US military (ideally the entire US government) in a volatile, uncertain, complex, and ambiguous world. This paper will argue that a significant step toward addressing the problem could be made by the adoption of the work of John Boyd into the curriculum of professional military education (PME). It is time for a paradigm shift and revolution in military affairs that begins with the way we think and learn about complex problems on today's battlefield.

The Foundations and Future of Public Law - Elizabeth Fisher 2020-03-26

Public law in the UK and EU has undergone seismic changes over the last forty years: development and membership of the EU, the Human Rights Act, devolution, the fostering of public law expertise within the judiciary, the globalization of public law, and the increased interaction between the academy, judiciary, barristers, public interest groups, and legislatures have transformed the public law landscape. Commentators spend much time at the frontiers of the subject, responding rapidly to new developments and providing guidance to scholars, legislators, and judges for future directions. In these circumstances, there is rarely a chance to reflect upon the implications of these changes for the fundamentals of public law and how those fundamentals relate to one

another. In this collection, leading figures in UK and EU public law address this lacuna. Inspired by the depth, scope, and ambition of the work of Paul Craig, Professor of English Law at Oxford University, the focus of this collection is upon exploring and reflecting upon six fundamentals of public law and the interrelationship between them: legislation, case law, theory, institutions, process, and constitutions.

Saviour Siblings - Michelle Taylor-Sands 2013-10-30

Genetic screening technologies involving pre-implantation genetic diagnosis (PGD) raise particular issues about selective reproduction and the welfare of the child to be born. How does selection impact on the identity of the child who is born? Are children who are selected for a particular purpose harmed or treated as commodities? How far should the state interfere with parents' reproductive choices? Currently, concerns about the welfare of the child in selective reproduction have focused on the individual interests of the child to be born. This book re-evaluates the welfare of the child through the controversial topic of saviour sibling selection. Drawing on relational feminist and communitarian ethics, Michelle Taylor-Sands argues that the welfare of the child to be born is inextricably linked with the welfare of his/her family. The author proposes a relational model for selective reproduction based on a broad conception of the welfare of the child that includes both individual and collective family interests. By comparing regulation in the UK and Australia, the book maps out how law and policy might support a relational model for saviour sibling selection. With an interdisciplinary focus, *Saviour Siblings: A Relational Approach to the Welfare of the Child in Selective Reproduction* will be of particular interest to academics and students of bioethics and law as well as practitioners and policymakers concerned with the ethics of selective reproduction.

domestic terrorism, globalization of armed groups, children on the battlefield, religious influence on armed fights, and more. This rich anthology offers scholars and citizens a new way to think about national and international security—as it stands today, and its future.
