The Relationship Between Learning Styles and Perceptions of Blended Learning - James Gambiza
2009

The Nepal-India Water Relationship: Challenges -
Dwarika N. Dhungel
2009-01-18

Since its establishment as a policy research institute in 1990, the Institute for Integrated Development Studies (IIDS) has been engaged in promoting public awareness and understanding of issues of national importance by undertaking studies and research on contemporary themes. It has been disseminating findings of its studies to policymakers in the public and private sectors and ultimately to the public at large. Water resources is one

of the areas of strong public interest in Nepal. It is considered a potent engine of economic growth. Its optimal use is dependent on, among other things, the cooperation among the riparian countries, especially India and Bangladesh. Water resources development is one of the subjects in which the Institute has been engaged since its beginning by undertaking studies through national professionals and joint studies on the water resources of the Ganges, Brahmaputra and Meghna river basins with policy research institutes from India and Bangladesh. In order to help policymakers to develop long-term perspectives of the need for cooperation for optimal use of water available in the tributaries of the Ganges, the Institute was

involved in a major track-two exercise for over five years during the 1990s. The Institute has been undertaking a series of exercises in the form of publication and dissemination of study findings in the field since the early 1990's. In that series, this book is the latest one and is published in collaboration with Springer Science + Business Media BV, Dordrecht, The Netherlands.

Frontiers in Environmental Science - Editor's Picks 2021 - Martin Siegert 2021-11-24

Environmental Science - Randy Brooks 2010-05-31

All the sciences are interrelated, as our 3-panel (6-page) guide will reinforce by showing the relationship between human beings, the environment and planet Earth. With its overview of Earth's history to the study of ecosystems, sustainability, pollution and climate change, our information-packed guide is sure to appeal equally to science students and environmentalists. Vivid graphics and diagrams

illustrate the concepts explained throughout the text. *A study of relationship between scientific attitude and environmental awareness among secondary students* - Stuti Srivastava 2015-09-08 Research Paper (postgraduate) from the year 2013 in the subject Pedagogy - School Pedagogics, Allahabad University, language: English, abstract: Environmental education should have been given high priority. It extends to create awareness about the environment among the students. This study uses the descriptive type survey approach. The sample for the study consisted of 152 students (30 boys & 39 girls of class IX and 35 boys & 48 girls of class XI respectively) studying in Hindi medium U P Board schools of Allahabad city. The tools used were Environmental Awareness Test and Scientific Attitude questionnaire of K. S. Misra. Product- moment coefficient of correlation was computed for the analysis of the data. The environmental education conference at Tbilisi

(USSR) in 1977 identified its ultimate aim as creating awareness, behavioural, attitudes and values directed towards preserving the biosphere, the quality of life everywhere as well on safeguarding ethical values and cultural and natural heritage, including holy places, historical landmarks, works of arts, monuments and sites, human and natural environment, including fauna and flora and human settlements. The Intergovernmental Conference on Environmental Education (UNESCO, 1978) recommended the primary categories of the environmental education curriculum goals and objectives of (a) awareness, (b) knowledge, (c) attitudes, (d) skills, (e) participation.

Environmental Science Theory

- W.T. de Groot 1992-10-22

Having no competitive works, this unique publication presents a single structure for the analysis, explanation and solution of environmental problems, regardless of their location, nature or scale. In

this problem-oriented approach, a coherent framework interconnects the study of facts and values, environmental systems, social causes and ethical premises. Counterbalancing current biases, the author emphasizes the fundamental, normative, economic and social-scientific aspects of truly interdisciplinary environmental science. For instance, the normative side of environmental problems are often neglected, resulting in policy designs and evaluations containing inefficient mixtures of sophisticated models and poorly grounded normative premises; this is the first major study to enrich the field with more normative consistency and groundedness. It is also the first text to consistently identify the social causes of environmental problems, rather than focusing on the physical-scientific aspects, and thus design deeper and more effective policies. Furthermore, a tinge of post-modern thinking runs throughout the book, with special care being taken,

however, to constantly keep in view the practical relevance of theory for problem-oriented work. The book will be of interest to environmental scientists and managers wishing to improve the consistency and depth of their work, to social scientists and geographers wishing to connect their discipline to the environmental problems field, and to general scientists interested in the connections between philosophy and practice.

Conducting Research in Conservation - Helen Newing
2010-10-18

Conducting Research in Conservation is the first textbook on social science research methods written specifically for use in the expanding and increasingly multidisciplinary field of environmental conservation. The first section on planning a research project includes chapters on the need for social science research in conservation, defining a research topic, methodology, and sampling. Section two

focuses on practical issues in carrying out fieldwork with local communities, from fieldwork preparation and data collection to the relationships between the researcher and the study community. Section three provides an in-depth focus on a range of social science methods including standard qualitative and quantitative methods such as participant observation, interviewing and questionnaires, and more advanced methods, such as ethnobiological methods for documenting local environmental knowledge and change, and participatory methods such as the 'PRA' toolbox. Section four then demonstrates how to analyze social science data qualitatively and quantitatively; and the final section outlines the writing-up process and what should happen after the end of the formal research project. This book is a comprehensive and accessible guide to social science research methods for students of conservation related subjects and

practitioners trained in the natural sciences. It features practical worldwide examples of conservation-related research in different ecosystems such as forests; grasslands; marine and riverine systems; and farmland. Boxes provide definitions of key terms, practical tips, and brief narratives from students and practitioners describe the practical issues that they have faced in the field.

Assessing Relationships Between Social Context, Knowledge and Student Perspective in a College Course on Environmental Science - Michael Mathis 2017
Environmental perspectives influence how people view the world and so evaluating the influence of knowledge and social context on perspectives may lead to more effective environmental education. I assessed the influence of social context and knowledge on the perspectives of college students by utilizing the New Ecological Paradigm Survey in a University environmental science course. Over four

semesters and two years, students completed 1030 paired NEP surveys at the start and end of the course. An overall significant change in score was identified due to the course. Significant relationships also existed between change in NEP and initial score, college of study, and course attendance, suggesting an influence of social context on perspective. Although few studies have identified overall significant influences on perspective due to a course, no study has used course grades as a representation of knowledge to evaluate the influence of knowledge on perspective. No relationship was found between change in NEP and any course achievement or service learning, suggesting no connection between course content and perspective. Additional analysis found possible contradictions in ecocentric and anthropocentric question responses as shown by differences in mean scores greater than could be explained by question phrasing

or confidence intervals. Contradictions may exist because of the conflicting influence of social context and knowledge. Thus, social context may be a more important factor influencing perspective than knowledge, consistent with explanations for many of the partisan divides on scientific issues such as climate change.

Ecology and Environmental Science - Jeffery Clarke
2019-06-24

Environmental science is a vast field concerned with the study of numerous environmental phenomena. As a discipline, environmental science integrates theories and concepts of many other scientific fields like biology, chemistry, plant science, limnology, etc. Ecology, on the other hand, is an interdisciplinary field of biology that studies the relationships of organisms with their immediate surroundings. Ecology has a number of applications across various fields of study such as conservation biology, natural

resource management, wetland management, etc. This book attempts to present the concepts and theories central to the field of ecology in detail and examine their relevance in the field of environmental science. It unfolds the innovative aspects of ecology and illustrates how the techniques of this field can be applied for the progress of environmental science in the future. The topics included in this book are of utmost significance and bound to provide incredible insights to readers. Those in search of information to further their knowledge will be greatly assisted by this book.

A Text Book of Environmental Science - Vidya Thakur 2016-01-01

This book is eminently useful for the students pursuing Under Graduate and Post Graduate Courses in Environmental science/ Environmental Engineering / Environmental Biotechnology and environmentalists.

A Study to Determine the Relationship Between the

Attitudes of Environmental and Non-environmental Science Students Towards Various Environmentally Oriented Social Issues -

Jerome William Yatsko 1976

Essentials of Environmental Science, Second Edition - R. Parker

A Study of the Relationships of Environmental Conditions with Organizational Structure and Long-range Planning - F. Ghouchani 1984

Citizen Science - Alan Irwin
2002-01-10

We are all concerned by the environmental threats facing us today. Environmental issues are a major area of concern for policy makers, industrialists and public groups of many different kinds. While science seems central to our understanding of such threats, the statements of scientists are increasingly open to challenge in this area. Meanwhile, citizens may find themselves labelled as 'ignorant' in environmental matters. In

Citizen Science Alan Irwin provides a much needed route through the fraught relationship between science, the public and the environmental threat.

A Study to Determine the Relationship Between the Attitudes of Environmental and Non-environmental Science Students Toward Various Environmentally Oriented Social Issues - Jerome William Yatsko 1976

Natural Resources and Society: Understanding the Complex Relationship Between Humans and the Environment - Mohd Akhter Ali 2023-12-21

"Natural Resources and Society: Understanding the Complex Relationship Between Humans and the Environment" is a study of the dynamic interplay between humans and the natural world. The book explores the complex relationship between human societies and the environment, examining how human actions can both impact and be influenced by natural

resources. The book covers a broad range of topics, including the history of human resource use, the role of natural resources in economic development, and the environmental impacts of resource extraction and consumption. It also considers the social and cultural factors that shape human interactions with the natural world, and the challenges of sustainable resource management. Overall, the book provides a comprehensive overview of the relationship between humans and the environment, emphasizing the importance of understanding this relationship in order to develop more sustainable and equitable societies.

Numerical Ecology with R -

Daniel Borcard 2018-03-19

This new edition of Numerical Ecology with R guides readers through an applied exploration of the major methods of multivariate data analysis, as seen through the eyes of three

ecologists. It provides a bridge between a textbook of numerical ecology and the implementation of this discipline in the R language. The book begins by examining some exploratory approaches. It proceeds logically with the construction of the key building blocks of most methods, i.e. association measures and matrices, and then submits example data to three families of approaches: clustering, ordination and canonical ordination. The last two chapters make use of these methods to explore important and contemporary issues in ecology: the analysis of spatial structures and of community diversity. The aims of methods thus range from descriptive to explanatory and predictive and encompass a wide variety of approaches that should provide readers with an extensive toolbox that can address a wide palette of questions arising in contemporary multivariate ecological analysis. The second edition of this book features a complete revision to the R code and offers improved

procedures and more diverse applications of the major methods. It also highlights important changes in the methods and expands upon topics such as multiple correspondence analysis, principal response curves and co-correspondence analysis. New features include the study of relationships between species traits and the environment, and community diversity analysis. This book is aimed at professional researchers, practitioners, graduate students and teachers in ecology, environmental science and engineering, and in related fields such as oceanography, molecular ecology, agriculture and soil science, who already have a background in general and multivariate statistics and wish to apply this knowledge to their data using the R language, as well as people willing to accompany their disciplinary learning with practical applications. People from other fields (e.g. geology, geography, paleoecology, phylogenetics, anthropology, the social and

education sciences, etc.) may also benefit from the materials presented in this book. Users are invited to use this book as a teaching companion at the computer. All the necessary data files, the scripts used in the chapters, as well as extra R functions and packages written by the authors of the book, are available online (URL: <http://adn.biol.umontreal.ca/~numericalecology/numecolR/>).

Environmental Science: A Global Outlook - Paige Tucker
2021-12-07

Environmental science is a multidisciplinary approach to the study of the environment through biological, physical and information sciences. Atmospheric sciences, ecology, environmental chemistry, and geosciences are the main components of environmental science. It is an essential field of scientific investigation due to the need for an interdisciplinary approach to analyze complex environmental problems. It includes the study of environmental system. It also studies the social sciences to understand human

relationships with environment. Environmental science examines the effects of human activities on biophysical environment. It also focuses on protecting the environment. Environmental science also studies the interaction of chemical, physical and biological processes. This book is a compilation of chapters that discusses the most vital concepts and emerging trends in the field of environmental science. It aims to provide a detailed knowledge of the discipline. Scientists and students actively engaged in this field will find this book full of unexplored concepts.

A Companion to Environmental Geography - Noel Castree
2016-10-03

A Companion to Environmental Geography is the first book to comprehensively and

systematically map the research frontier of 'human-environment geography' in an accessible and comprehensive way. Cross-cuts several areas of a discipline which has traditionally been seen as divided; presenting work by human and physical geographers in the same volume Presents both the current 'state of the art' research and charts future possibilities for the discipline Extends the term 'environmental geography' beyond its 'traditional' meanings to include new work on nature and environment by human and physical geographers - not just hazards, resources, and conservation geographers Contains essays from an outstanding group of international contributors from among established scholars and rising stars in geography
