The History of the Internet in Byte-Sized Chunks Chris Stokel-Walker 2023-10-26 A fascinating, accessible and expertly written introduction to the most important invention in human history: the internet.

Love in the Time of Algorithms Dan Slater 2013-01-24 "If online dating can blunt the emotional pain of separation, if adults can afford to be increasingly demanding about what they want from a relationship, the effect of online dating seems positive. But what if it's also the case that the prospect of finding an ever more compatible mate with the click of a mouse means a future of relationship instability, a paradox of choice that keeps us chasing the illusive bunny around the dating track?" It's the mother of all search problems: how to find a spouse, a mate, a date. The escalating marriage age and declining marriage rate mean we're spending a greater portion of our lives unattached, searching for love well into our thirties and forties. It's no wonder that a third of America's 90 million singles are turning to dating Web sites. Once considered the realm of the lonely and desperate, sites like eHarmony, Match, OkCupid, and Plenty of Fish have been embraced by pretty much every demographic. Thanks to the increasingly efficient algorithms that power these sites, dating has been transformed from a daunting transaction based on scarcity to one in which the possibilities are almost endless. Now anyone—young, old, straight, gay, and even married—can search for exactly what they want, connect with more people, and get more information about those people than ever before. As

journalist Dan Slater shows, online dating is changing society in more profound ways than we imagine. He explores how these new technologies, by altering our perception of what's possible, are reconditioning our feelings about commitment and challenging the traditional paradigm of adult life. Like the sexual revolution of the 1960s and '70s, the digital revolution is forcing us to ask new questions about what constitutes "normal": Why should we settle for someone who falls short of our expectations if there are thousands of other options just a click away? Can commitment thrive in a world of unlimited choice? Can chemistry really be quantified by math geeks? As one of Slater's subjects wonders, "What's the etiquette here?" Blending history, psychology, and interviews with site creators and users, Slater takes readers behind the scenes of a fascinating business. Dating sites capitalize on our quest for love, but how do their creators' ideas about profits, morality, and the nature of desire shape the virtual worlds they've created for us? Should we trust an industry whose revenue model benefits from our avoiding monogamy? Documenting the untold story of the online-dating industry's rise from ignominy to ubiquity—beginning with its early days as "computer dating" at Harvard in 1965—Slater offers a lively, entertaining, and thought provoking account of how we have, for better and worse, embraced technology in the most intimate aspect of our lives.

Oxford Handbook of Internet Psychology Adam Joinson
2009-02-12 Over one billion people use the Internet globally. Psychologists are beginning to understand what people do online, and the impact being online has on behaviour. It's making us re-think many of our existing assumptions about what it means to be a social being. For instance, if we can talk, flirt, meet people and fall in love online, this challenges many of psychology's theories that intimacy or understanding requires physical co-presence. "The Oxford Handbook of Internet Psychology" brings together many of the leading researchers in what can be termed 'Internet

Psychology'. Though a very new area of research, it is growing at a phenomenal pace. In addition to well-studied areas of investigation, such as social identity theory, computer-mediated communication and virtual communities, the volume also includes chapters on topics as diverse as deception and misrepresentation, attitude change and persuasion online, Internet addiction, online relationships, privacy and trust, health and leisure use of the Internet, and the nature of interactivity. With over 30 chapters written by experts in the field, the range and depth of coverage is unequalled, and serves to define this emerging area of research. Uniquely, this content is supported by an entire section covering the use of the Internet as a research tool, including qualitative and quantitative methods, online survey design, personality testing, ethics, and technological and design issues. While it is likely to be a popular research resource to be 'dipped into', as a whole volume it is coherent and compelling enough to act as a single text book. "The Oxford Handbook of Internet Psychology" is the definitive text on this burgeoning field. It will be an essential resource for anyone interested in the psychological aspects of Internet use, or planning to conduct research using the 'net'.

Invisible Users Jenna Burrell 2012-05-04 An account of how young people in Ghana's capital city adopt and adapt digital technology in the margins of the global economy. The urban youth frequenting the Internet cafés of Accra, Ghana, who are decidedly not members of their country's elite, use the Internet largely as a way to orchestrate encounters across distance and amass foreign ties—activities once limited to the wealthy, university-educated classes. The Internet, accessed on second-hand computers (castoffs from the United States and Europe), has become for these youths a means of enacting a more cosmopolitan self. In *Invisible Users*, Jenna Burrell offers a richly observed account of how these Internet enthusiasts have adopted, and adapted to their own priorities, a technological system that was not designed with them in mind. Burrell describes the material space of the urban Internet café and the virtual space of push and pull between young Ghanaians and the foreigners they encounter online; the region's famous 419 scam strategies and the rumors of “big gains” that fuel them; the influential role of churches and theories about how the supernatural operates through the network; and development rhetoric about digital technologies and the future viability of African Internet cafés in the region. Burrell, integrating concepts from science and technology studies and African studies with empirical findings from her own field work in Ghana, captures the interpretive flexibility of technology by users in the margins but also highlights how their invisibility puts limits on their full inclusion

into a global network society.

Cecrle 2014-02-14 This collection of short stories includes many different genres. Whether the story line is a psychological effort, comedy, science fiction, fantasy or satire, the author has tried to render a diverse entertainment value to each. In this fast-paced, hectic, and TV-dominated culture, these stories were written to offer a half-hour to one-hour window of insightful entertainment, reminiscent of "The Twilight Zone" and "Hitchcock Presents." Many of these tales have an abrupt, unexpected twist and could easily be adapted as television screenplays. The sequence of these short stories will keep the reader guessing as to what motifs and messages will appear next, much like a baseball pitcher working his batter to keep him off balance. Many of these stories are like a quick jolt, providing instant gratification. Among the 20 very different and mind-bending story lines are the wizardry of Baron Chronosimos, the scientific genius of time traveler Frank Morrison, and the ghostly appearance of former Black Panther Fred Hampton. Says the author, "With some it may be history, others a comical farce. I have tried to incorporate many different themes that might encourage a broader understanding of the myriad thought processes to be gained through the printed word." So sit back and enjoy The Big Picture and Other Byte-sized Short Stories.

Intimacy on the Internet Lauren Rosewarne 2016-04-14 The focus of this book is on the media representations of the use of the Internet in seeking intimate connections—be it a committed relationship, a hook-up, or a community in which to dabble in fringe sexual practices. Popular culture (film, narrative television, the news media, and advertising) present two very distinct pictures of the use of the Internet as related to intimacy. From news reports about victims of online dating, to the presentation of the desperate and dateless, the perverts and the deviants, a distinct frame for the intimacy/Internet connection is negativity. In some examples however, a changing picture is emerging. The ubiquitousness of Internet use today has meant a slow increase in comparatively more positive representations of successful online romances in the news, resulting in more positive-spin advertising and a more even-handed presence of such liaisons in narrative television and film. Both the positive and the negative media representations are categorised and analysed in this book to explore what they reveal about the intersection of gender, sexuality, technology and the changing mores regarding intimacy.

Economic Geography William P. Anderson 2012-07-26 Economic geographers study and attempt to explain the spatial configuration of economic activities, including the production of goods and services, their transfer from one economic agent to another and their transformation into utility by consumers. The spatial configuration, which includes both the pattern of activities on the map and the relationships between activities occurring in different places, is the outcome of a vast number of distinct but interrelated decisions made by firms, households, governments and a variety of other private and public institutions. The goal of this book is to provide the student with a rigorous introduction to

a diverse but logically consistent set of analytical models of the spatial decisions and interactions that drive the evolution of the economic landscape. It begins by explaining fundamental concepts that are critical to all topics in economic geography: the friction of distance, agglomeration, spatial interaction, market mechanisms, natural resources and production technologies. Sections follow to cover major areas of inquiry including multiregional economies, location theory, markets for space and systems of cities. The final section synthesizes and builds on these topics to address two trends that provide particular challenges to economic geographers today: globalization and the emergence of the knowledge economy.

Relationships Byte Lorenzo "el Gee" Gladden 2015-02-14 There once was a time where if you wanted to talk to someone, you picked up your landline and called them. If that person wasn't home, you had to wait until they were. In that same time, if you wanted to meet a man or a woman, you went out to a club or a bar. While at the bar, you would survey the room until you found someone that caught your eye. When that person was identified the next step was to build up the courage to approach that person or wait for an opening. From that initial meeting came different outcomes: rejection or acceptance. If acceptance was the outcome, you exchanged numbers and the courtship began. The courtship included a series of phone conversations-some filled with plenty of awkward breathing. Also in the courtship there was a series of dates and meetings until the two people involved came

to a mutual understanding that it was time to move to the next level...the relationship and all that follows. In this new age, all that has been thrown out of the window. Some still use that route but things have become much more simplified. With the emergence of the internet, smart phones, and social media websites, in the click of a mouse a person can become connected with millions of people. In the early days of the internet, simple monochrome screened chatrooms evolved into such websites as College Club, Black Planet, and MySpace. With the evolution of today's constantly changing technology, new websites pop up daily. In addition to that, the cell phone technology changes just as fast. As fast as the new I-phone or Galaxy comes out, you better believe that the next generation of those devices are already in the making if not completed. Entertainment TV once reported that there are over a billion people on Facebook and over 250 million people on Twitter. Those are just two of the most popular social media websites. Under those two powerhouses lie the underlings of the World Wide Web...the dating sites. The ones that most people see are the good, clean, and wholesome ones like eHarmony and Match.com. Since there are so many different types of people in the world looking for different things, there is a website for just about everyone.
