UNDERSTANDING SUICIDE - 2018

Psychopathology in Women - Margarita Sáenz-Herrero 2019-07-15

This book examines sex and gender differences in the causes and expression of medical conditions, including

mental health disorders. Sex differences are variations attributable to individual reproductive organs and the XX or XY chromosomal complement. Gender differences are variations that result from biological sex as well as individual self-representation which include

psychological, behavioural, and social consequences of an individual's perceived gender. Gender is still a neglected field in psychopathology, and gender differences is often incorrectly used as a synonym of sex differences. A reconsideration of the definition of gender, as the term that subsumes masculinity and femininity, could shed some light on this misperception and could have an effect in the study of health and disease. This second edition of Psychopathology clarifies the anthropological, cultural and social aspects of gender and their impact on mental health disorders. It focuses on gender perspective as a paradigm not only in psychopathology but also in mental health disorders. As such it promotes open mindedness in the definition and perception of symptoms, as well as assumptions about those symptoms, and raises awareness of mental health.

Queer Youth, Suicide and Self-Harm - E. McDermott
2016-04-08

Offering a new way of understanding the high self-harm and suicide rates among sexual and gender minority youth, this book prioritises the perspectives and experiences of queer young people, including those who have experience of self-harming and/or feeling suicidal. Presenting analysis based on research carried out with young people both online and face-to-face, the authors offer a critical perspective on the role of norms, namely developmental norms, gender and sexuality norms, and neoliberal norms, in the production of self-harming and suicidal youth. *Queer Youth, Suicide and Self-Harm* is unique in the way it works at the intersection of class and sexuality, and in its specific focus on transgender youth and the concept of embodied distress. It also examines the implications of this research for self-harm reduction and suicide prevention.

[Reducing Suicide](#) - Institute of Medicine 2002-10-01
Every year, about 30,000

people die by suicide in the U.S., and some 650,000 receive emergency treatment after a suicide attempt. Often, those most at risk are the least able to access professional help. *Reducing Suicide* provides a blueprint for addressing this tragic and costly problem: how we can build an appropriate infrastructure, conduct needed research, and improve our ability to recognize suicide risk and effectively intervene. Rich in data, the book also strikes an intensely personal chord, featuring compelling quotes about people's experience with suicide. The book explores the factors that raise a person's risk of suicide: psychological and biological factors including substance abuse, the link between childhood trauma and later suicide, and the impact of family life, economic status, religion, and other social and cultural conditions. The authors review the effectiveness of existing interventions, including mental health practitioners' ability to assess suicide risk among patients. They present lessons

learned from the Air Force suicide prevention program and other prevention initiatives. And they identify barriers to effective research and treatment. This new volume will be of special interest to policy makers, administrators, researchers, practitioners, and journalists working in the field of mental health.

Suicide Across the Life Span -
Judith M. Stillion 1996

Twenty-nine collected essays represent a critical history of Shakespeare's play as text and as theater, beginning with Samuel Johnson in 1765, and ending with a review of the Royal Shakespeare Company production in 1991. The criticism centers on three aspects of the play: the love/friendship debate.

Youth Suicide and Bullying -
Peter Goldblum 2015

High profile media reports of young people committing suicide after experiencing bullying have propelled a national conversation about the nature and scope of this problem and the means to

address it. Specialists have long known that involvement in bullying in any capacity (as the victim or as the perpetrator) is associated with higher rates of suicidal ideation and behaviors, but evidence about which bullying subtype is at greatest risk is more mixed. For instance, some studies have shown that the association between suicidal ideation and bullying is stronger for targets of bullying than perpetrators. However, another study found that after controlling for depression, the association was strongest for perpetrators. Similar disagreement persists with regard to gender disparities relating to bullying and self-harm, for instance. *Youth Suicide and Bullying* presents an authoritative review of the science demonstrating the links between these two major public health concerns alongside informed discussion and evidence-based recommendations. The volume provides sound, scientifically grounded, and effective advice about bullying and suicide at

every level: national, state, and community. Chapters provide details on models of interpersonal aggression; groups at risk for both bullying and suicide (such as sexual minorities); the role of stigma; family, school, and community-based youth bullying and suicide prevention programs, and more. Each chapter concludes with recommendations for mental health providers, educators, and policymakers. Compiling knowledge from the most informed experts and providing authoritative research-based information, this volume supports efforts to better understand and thereby reduce the prevalence of victimization and suicide.

[Youth Suicide Prevention and Intervention](#) - John P.

Ackerman 2022-08-24

This open access book focuses on the public health crisis of youth suicide and provides a review of current research and prevention practices. It addresses important topics, including suicide epidemiology, suicide risk detection in school

and medical settings, critical cultural considerations, and approaches to lethal means safety. This book offers cutting-edge research on emerging discoveries in the neurobiology of suicide, psychopharmacology, and machine learning. It focuses on upstream suicide prevention research methods and details how cost-effective approaches can mitigate youth suicide risk when implemented at a universal level. Chapters discuss critical areas for future research, including how to evaluate the effectiveness of suicide prevention and intervention efforts, increase access to mental health care, and overcome systemic barriers that undermine generalizability of prevention strategies. Finally, this book highlights what is currently working well in youth suicide prevention and, just as important, which areas require more attention and support. Key topics include: The neurobiology of suicide in at-risk children and adolescents. The role of machine learning in

youth suicide prevention. Suicide prevention, intervention, and postvention in schools. Suicide risk screening and assessment in medical settings. Culturally informed risk assessment and suicide prevention efforts with minority youth. School mental health partnerships and telehealth models of care in rural communities. Suicide and self-harm prevention and interventions for LGBTQ+ youth. Risk factors associated with suicidal behavior in Black youth. Preventing suicide in youth with autism spectrum disorder (ASD) and intellectual disability (ID). Youth Suicide Prevention and Intervention is a must-have resource for policy makers and related professionals, graduate students, and researchers in child and school psychology, family studies, public health, social work, law/criminal justice, sociology, and all related disciplines.

Suicide and self harm in young people - Eve Griffin
2023-02-10

Behavioral Neurobiology of Suicide and Self Harm -

Enrique Baca-Garcia
2020-12-21

This book reviews the recent research into biological aspects of suicide behavior and outlines each of the varied, recent approaches to prevent suicide. Suicidal behavior, perhaps, is the most complex behavior that combines biological, social, and psychological factors. A new frontier and new opportunities are opening with the technologies of data acquisition and data analysis. Personalized models based on digital phenotype could provide promising strategies for preventing suicide.

Nonsuicidal Self-Injury - E.

David Klonsky 2011-01-01

Nonsuicidal self-injury (NSSI) is a baffling, troubling, and hard to treat phenomenon that has increased markedly in recent years. Key issues in diagnosing and treating NSSI adequately include differentiating it from attempted suicide and other mental disorders, as well as understanding the motivations for self-injury and the context in which it occurs. This accessible and practical book provides therapists and students with a clear understanding of these key issues, as well as of suitable assessment techniques. It then goes on to delineate research-

informed treatment approaches for NSSI, with an emphasis on functional assessment, emotion regulation, and problem solving, including motivational interviewing, interpersonal skills, CBT, DBT, behavioral management strategies, delay behaviors, exercise, family therapy, risk management, and medication, as well as how to successfully combine methods.

Mortality Among Teenagers Aged 12-19 Years - Arialdi M. Miniño 2010

Suicidal Tendency in Youth in Relation to Their Gender -

Piyushkumar Dholariya

2017-07-11

The suicide rate among children and adolescents in the

world has increased dramatically in recent years and has been accompanied by substantial changes in the leading methods of youth suicide, especially among young girls. Much work is currently underway to elucidate the relationships between psychopathology, substance use, child abuse, bullying, internet use, and youth suicidal behavior. Recent evidence also suggests sex specific and moderating roles of gender in influencing risk for suicide and suicidal behavior.

The Interpersonal Theory of Suicide - Thomas E. Joiner 2009

This book offers a theoretical framework for diagnosis and risk assessment of a patient's entry into the world of suicidality, and for the creation of preventive and public-health campaigns aimed at the disorder. The book also provides clinical guidelines for crisis intervention and therapeutic alliances in psychotherapy and suicide prevention.

Preventing Suicide - Who

Oxford Textbook of Suicidology and Suicide Prevention -

Danuta Wasserman 2021-01-08
Part of the authoritative Oxford Textbooks in Psychiatry series, the new edition of the Oxford Textbook of Suicidology and Suicide Prevention remains a key text in the field of suicidology, fully updated with new chapters devoted to major psychiatric disorders and their relation to suicide.

Gender, Sex, and Sexuality among Contemporary Youth -

Patricia Neff Cluster
2017-11-27

This volume examines the evolving norms concerning sex, gender, and sexuality in the lives of children and adolescents addressing topics such as: the development of gender identity, sexual behavior among youth, LGBT youth, transgender youth, parental and peer influences upon the development of gender and gender identity and dating violence.

Suicidal tendency in youth in relation to their gender -

Piyush Dholariya 2017-06-28
Master's Thesis from the year 2017 in the subject Psychology - Miscellaneous, grade: 6.84/10, Indira Gandhi National Open University, course: Psychology, language: English, abstract: The suicide rate among children and adolescents in the world has increased dramatically in recent years. It has been accompanied by substantial changes in the leading methods of youth suicide, especially among young girls. Much work is underway to elucidate the relationships between psychopathology, substance use, child abuse, bullying, internet use, and youth suicidal behaviour. Recent evidence also suggests sex-specific and moderating roles of gender in influencing risk for suicide and suicidal behaviour. Suicide is the third leading cause of death among adolescents globally, accounting for 11% of all deaths to youth ages 12 to 19 between 1999 and 2006, and rates of attempting suicide and suicidal ideation are higher than those of completed

suicide. According to the Centers for Disease Control and Prevention, 157,000 youth between the ages of 10 and 24 receive medical care at emergency departments for self-inflicted injuries each year. Data from the 2011 National Youth Risk Behavior Survey show that 16% of youth reported seriously considering suicide, 13% reported creating a plan, and 8% reported trying to take their own lives in the 12 months preceding the survey.

The bulk of existing research on adolescent suicide focuses on psychological explanations and individual-level risk factors for suicide, including mental health, substance use patterns, and exposure to traumatic life events, such as sexual abuse. This work is critical because it identifies individuals at the greatest risk of suicide and provides clear intervention strategies to address individuals' unique paths to suicidal ideation.
