Sex in Transition - Amanda Lock Swarr
2012-12-06

Argues that South Africa's apartheid system of racial segregation relied on an unexamined but interrelated system of sexed oppression that was at once both rigid and flexible. Sex in Transition explores the lives of those who undermine the

man/woman binary, exposing the gendered contradictions of apartheid and the transition to democracy in South Africa. In this context, gender liminality—a way to describe spaces between common conceptions of “man” and “woman”—is expressed by South Africans who identify as transgender, transsexual, transvestite, intersex, lesbian, gay, and/or eschew these categories altogether. This book is the first academic exploration of challenges to the man/woman binary on the African continent and brings together gender, queer, and postcolonial studies to question the stability of sex. It examines issues including why transsexuals' sex transitions were encouraged under apartheid and illegal during the political transition to democracy and how butch lesbians and drag queens in urban townships reshape race and gender. Sex in Transition challenges the dominance of theoretical frameworks based in the global North, drawing on fifteen years of research in South Africa to define the

Routledge Handbook of Sexuality Studies in East Asia - Mark McLelland 2014-09-15

This collection brings together cutting-edge work by established and emerging scholars focusing on key societies in the East Asian region: China, Taiwan, Hong Kong, Japan, North and South Korea, Mongolia and Vietnam. This scope enables the collection to reflect on the nature of the transformations in constructions of sexuality in highly developed, developing and emerging societies and economies. Both Japan and China have established traditions of 'sexuality' studies reflecting longstanding indigenous understandings of sex as well as more recent developments which interface with

Euro-American medical and psychological understandings. Authors reflect upon the complex colonial and economic interactions and cultural flows which have affected the East Asian region over the last two centuries. They trace local flows of ideas instead of defaulting to Euro-American paradigms for sexuality studies. Through looking at regional and global exchanges of ideas about sexuality, this volume adds considerably to our understanding of the East Asian region and contributes to wider discussions of social transformation, modernisation and globalisation. It will be essential reading in undergraduate and graduate programs in sexuality studies, gender studies, women's studies and masculinity studies, as well as in anthropology, sociology, history, cultural studies, area studies and health sciences.

studies on biotech endeavors such as genetically modified foods in China, clinical trials in India, blood collection in Singapore and China, and stem-cell research in Singapore, South Korea, and Taiwan. While biotech policies and projects vary by country, the contributors identify a significant trend toward state entrepreneurialism in biotechnology, and they highlight the ways that political thinking and ethical reasoning are converging around the biosciences. As ascendant nations in a region of postcolonial emergence, with an “uncanny surplus” in population and pandemics, Asian countries treat their populations as sources of opportunity and risk. Biotech enterprises are allied to efforts to overcome past humiliations and restore national identity and political ambition, and they are legitimized as solutions to national anxieties about food supplies, diseases, epidemics, and unknown biological crises in the future. Biotechnological responses to perceived risks stir deep feelings about shared fate, and

they crystallize new ethical configurations, often re-inscribing traditional beliefs about ethnicity, nation, and race. As many of the essays in this collection illustrate, state involvement in biotech initiatives is driving the emergence of “bio-sovereignty,” an increasing pressure for state control over biological resources, commercial health products, corporate behavior, and genetic based-identities. Asian Biotech offers much-needed analysis of the interplay among biotechnologies, economic growth, biosecurity, and ethical practices in Asia. Contributors Vincanne Adams Nancy N. Transsexualism is most commonly defined as the desire to live as the opposite sex accompanied by a wish to change the body to that preferred sex through surgery or hormone therapy The term was coined in the middle of the 20th Century, but there are many references to the phenomenon throughout history - from Ancient Greek mythology to Roman times

Hair Restoration Surgery in Asians - Damkerng Pathomvanich 2010-02-18

This book, exclusively devoted to Asian hair, is a complete and comprehensive text written by a group of authors sharing their experience in their specialized fields of hair restoration. Included are many practical tips as well as chapters on regional transplantation such as eyebrows, eyelashes, sideburns, beards, and mustaches, in addition to the usual scalp hair restoration. Transgenders - Psychological Parameters, 6. Role of Tamil Community in the Development of Thirunangai Communities - A Profile, 7. Social Exclusion Of Transgender, 8. Kalki Subramanian - A Profile, 9. Conclusion. - PREFACE - The legal, economic and social marginalization of transgender affects every aspect of their lives. Social exclusion is reflected in laws that do not acknowledge the existence of transgender, either as a third gender or as people who wish to transition from male to female, or from female to male. Without legal protection, transgender is vulnerable to daily violence and discrimination, with cumulative impacts. Some impacts are visible, such as the HIV epidemic among transgender in many parts of the world. Most impacts are insidious, with transgender, their families, and communities left to support each

other and struggle for their rights. Human rights experts have offered guidance on how to apply existing human laws. From a young age, many transgender people experience social rejection and marginalization because of their expression of their gender identity. This social exclusion affects their self-perception and sense of worth. It may contribute to depression, anxiety, drug and alcohol use, self-harm and suicide. Young transgender people are particularly vulnerable to homelessness, unemployment and economic instability, as they often depend on family and educational institutions for housing and other resources .This is mainly due to the fact that their inherent complexities in physiology which does not gel with their psychology deprivation of everything in their life.

economic growth during the last few decades. This study uses a recently developed projection model - HOMES, Household Model for Economic and Social Studies - to examine the changes and their continuing implications for six demographically sensitive sectors of the economy: education, health, housing, consumer expenditure, household saving, as well as labor force, employment, and wages. The relationship

between demographic change and each of these economic sectors is assessed through extensive analysis of census and survey data collected during the 1980s. The study is a joint effort of the East-West Center's Program on Population, the National Economic and Social Development Board of Thailand, and the Asian Development Bank.
